ANNUAL CLIMATE SUMMARY 2001

11 February: Well developed monsoon trough over the north of Australia with tropical cyclone *Winsome* located near western Gulf of Carpentaria. 2000/01 summer was extremely wet in the north and west.

13 December: A large cloud mass affects S.A. and eastern W.A. This typified the month of December in which Giles (W.A.) had a record wet month.
