Total				3.6																	

Observations were drawn from Streaky Bay (station 018079)

The closest evaporation and sunshine observations are taken at Ceduna, 90 kilometres to the northwest. These give an indication of conditions at Streaky Bay, but on an average annual basis. Streaky generally has slightly less evaporation and less sunshine than at Ceduna. Evaporation is affected by cloud cover, relative humidity, temperature and wind strength during the day. Daily sunshine hours are dependent on cloud amount. See the climate maps for average conditions.
