

MJO average conditions in May-Jun-Jul, 1974-2009

Rainfall odds  
850 hPa wind anomalies

Rainfall odds shown as the chance of weekly rainfall exceeding the median in that MJO phase.

These calculations follow the method provided in the paper Wheeler, M., et al., 2009, Journal of Climate, Vol. 22, 1482-1498.

Shading and vectors only shown where statistically significant.

[Australian Government Bureau of Meteorology](#)

Chance of exceeding normal weekly rainfall

Normal weekly rainfall in MJJ (mm)
