Monthly Weather Review Australia February 2016

The *Monthly Weather Review - Australia* is produced by the Bureau of Meteorology to provide a concise but informative overview of the temperatures, rainfall and significant weather events in Australia for the month.

To keep the *Monthly Weather Review* as timely as possible, much of the information is based on electronic reports. Although every effort is made to ensure the accuracy of these reports, the results can be considered only preliminary until complete quality control procedures have been carried out. Any major discrepancies will be noted in later issues.

We are keen to ensure that the *Monthly Weather Review* is appropriate to its readers' needs. If you have any comments or suggestions, please contact us:

Bureau of Meteorology
GPO Box 1289

Australia
media@bom.gov.au
www.bom.gov.au

Units of measurement

Except where noted, **temperature** is given in degrees Celsius (°C), **rainfall** in millimetres (mm), and **wind speed** in kilometres per hour (km/h).

Observation times and periods

Each station in Australia makes its main observation for the day at 9 am local time. At this time, the precipitation over the past 24 hours is determined, and maximum and minimum thermometers are also read and reset. In this publication, the following conventions are used for assigning dates to the observations made:

Maximum temperatures are for the 24 hours *from* 9 am on the date mentioned. They normally occur in the afternoon of that day.

Minimum temperatures are for the 24 hours *to* 9 am on the date mentioned. They normally occur in the early morning of that day.

Mean temperatures are the average of the daily maximum and daily minimum temperatures.

Daily rainfall is for the 24 hours *to* 9 am on the date mentioned. This means a significant fraction of the rain may have occurred on the previous calendar day.

Monthly rainfall is for the period from 9 am on the last day of the previous month to 9 am on the last day of this month.

Maximum daily wind gusts are in the 24 hours from midnight to midnight.

Climatological values

The climatological averages shown in the text and tables are generally long-term means based on observations from the years 1961–1990. They are not shown for sites with less than 25 years of record in that time, as they cannot then be calculated reliably. Climatological extremes are generally taken from all available years of record; the number of years can vary markedly from site to site.

Records

The tables of records are not exhaustive, as they only show sites with at least 30 years of record. This may exclude locations where a new site has been established; this means even some major cities and towns may not be listed.

Maps

The temperature and rainfall maps are intended to give an overview of the country. There could be discrepancies between the values shown on these maps and those at individual locations, as a result of the way the maps are generated. A wide range of maps of rainfall, temperature and other variables, covering the whole country and smaller regions can be found at www.bom.gov.au/climate/maps.

Accessing data

Tables of daily values for selected sites are included toward the back of the *Monthly Weather Review*. Data from many more sites and for other times are available from www.bom.gov.au/climate/data/.

Overview

- Australia's ninth-warmest February on record
- Above average rainfall in southwest Western Australia and south coast of South Australia
- Below average rainfall in northern Australia, and southeastern Australia including Tasmania
- Heat wave in northwestern Queensland results in some daily maximum records broken
- Cooler than average minimum temperatures in Western Australia and South Australia
- Two tropical cyclones: *Uriah* (Western Australia) and *Tatiana* (Queensland)

February was a warm month for Australia and the ninth-warmest February on record. The national mean temperature was 0.92 °C above the historical average, with the monthly mean maximum temperature 1.43 °C above average and the monthly mean minimum temperature 0.41 °C above average.

Mean temperatures and mean maxima were above average in all States, and mean minimum temperatures were above average in all States except Western Australia and South Australia.

Queensland recorded its fifth-warmest February on record for mean temperatures and equal sixth-

warmest for both maximum and minimum temperatures. Tasmania was sixth-warmest for minimum temperatures. A heat wave in north-western Queensland in the last week of February resulted in a number of records for daily maximum temperatures (see page 13) being broken in this region.

Rainfall was mostly below average across the country. Below average rainfall was experienced throughout the country's north, northern South Australia and for much of New South Wales and eastern Victoria. New South Wales recorded its driest February since 1978, with the statewide area average rainfall 70 per cent lower than the long term mean.

There were two tropical cyclones in the Australian region in February: *Uriah* near the Cocos (Keeling) Islands well offshore of Western Australia, and *Tatiana* in the Coral Sea east of Queensland. However, it was rainfall from ex-tropical cyclone *Stan* in the first few days of February that brought very much above average rainfall to the southwest of Western Australia and the southern coast of South Australia.

Areal averages in February 2016

	Rainfall anomaly	Mean maximum temperature anomaly	Mean minimum temperature anomaly	Mean temperature anomaly
Australia	-41 %	+1.43 °C 8th-highest	+0.41 °C	+0.92 °C 9th-highest
Western Australia	-43 %	+0.96 °C	-0.04 °C	+0.46 °C
Northern Territory	-49 %	+1.93 °C 8th-highest	+0.44 °C	+1.18 °C 10th-highest
South Australia	-33 %	+0.74 °C	-0.05 °C	+0.35 °C
Queensland	-28 %	+2.03 °C 6th-highest	+1.12 °C equal 6th-highest	+1.58 °C 5th-highest
New South Wales	-70 %	+1.91 °C	+0.64 °C	+1.28 °C
Victoria	-41 %	+0.70 °C	+0.56 °C	+0.63 °C
Tasmania	-13 %	+0.79 °C	+1.97 °C 6th-highest	+1.38 °C 9th-highest

Extremes in February 2016

	Hottest day	Coldest night	Wettest day	Warmest overall	Coollest overall	Wettest overall	Strongest wind gust
Australia	47.8 °C at Mardie (WA) on the 12th and Emu Creek Station (WA) on the 13th	-1.4 °C at Kunanyi (Mount Wellington Pinnacle) (Tas.) on the 16th	252.0 mm at Mount Jukes (Qld) on the 6th	34.1 °C at Marble Bar (WA)	9.8 °C at Kunanyi (Mount Wellington Pinnacle) (Tas.)	532.2 mm at Coconut Island (Qld)	150 km/h at Kunanyi (Mount Wellington Pinnacle) (Tas.) on the 26th
Western Australia	47.8 °C at Mardie on the 12th and Emu Creek Station on the 13th	3.2 °C at Jarrahdwood on the 25th	95.0 mm at Camballin on the 6th	34.1 °C at Marble Bar	19.2 °C at Hopetoun North	226.2 mm at Charnley River	94 km/h at Leonora Aero on the 23rd and Southern Cross Airfield on the 28th
Northern Territory	44.6 °C at Walungurru Airport on the 14th	12.0 °C at Kulgera on the 5th and 18th	142.0 mm at Leaders Creek on the 6th	34.0 °C at Walungurru Airport	28.7 °C at Arltunga and Central Arnhem Plateau	367.8 mm at South Alligator Rangers	85 km/h at Bradshaw on the 22nd

Queensland	46.1 °C at Julia Creek Airport on the 29th	11.1 °C at Stanthorpe Leslie Parade on the 14th	252.0 mm at Mount Jukes on the 6th	33.1 °C at Birdsville Airport	21.2 °C at Applethorpe	532.2 mm at Coconut Island	117 km/h at Dalby Airport on the 19th
New South Wales	44.1 °C at Pooncarie Mail Agency on the 23rd	-0.9 °C at Thredbo AWS on the 17th	152.6 mm at Careys Peak (Barrington Tops) on the 5th	30.5 °C at Tibooburra Airport	11.9 °C at Thredbo AWS	292.0 mm at Moorak Creek (The Den)	133 km/h at High Range AWS (Wanganderry) on the 20th
Victoria	44.5 °C at Ouyen (Post Office) on the 23rd	-0.8 °C at Mount Hotham on the 17th	50.4 mm at Burrowye Sation on the 1st	25.2 °C at Mildura Airport	12.4 °C at Mount Baw Baw	81.4 mm at Portland (Cashmore Airport)	104 km/h at Wilsons Promontory Lighthouse on the 15th and 16th
Tasmania	33.6 °C at Scotts Peak Dam on the 2nd	-1.4 °C at Kunanyi (Mount Wellington Pinnacle) on the 16th	54.8 mm at Mount Wellington (The Springs) on the 17th	19.7 °C at Larapuna (Eddystone Point) and Launceston (Ti Tree Bend) and Swan Island	9.8 °C at Kunanyi (Mount Wellington Pinnacle)	233.8 mm at Mount Read	150 km/h at Kunanyi (Mount Wellington Pinnacle) on the 26th
In this table <i>Hottest day</i> is the highest daily maximum temperature, <i>Coldest night</i> is the lowest daily minimum temperature, <i>Wettest day</i> is the highest daily rainfall total, <i>Warmest overall</i> is the highest mean monthly temperature, <i>Coollest overall</i> is the lowest mean monthly temperature and <i>Wettest overall</i> is the highest total monthly precipitation.							

Tropical cyclones *Uriah* and *Tatiana*

Two tropical cyclones developed in the Australian region during February, but neither caused major impacts on the Australia mainland.

Tropical cyclone *Tatiana* was named over the northwest Coral Sea in the afternoon on the 11th, *Tatiana* tracked south and remained well offshore to the Queensland coast before dissipating on the 15th. Southeastern Queensland beaches encountered some powerful, long period swells.

Tropical cyclone *Uriah* developed west of the Cocos (Keeling) Islands on the evening on the 13th, and move southwest into the La Reunion region on the evening on the 14th. Some minor damage, such as road erosion and fallen trees were experienced on the Cocos (Keeling) Islands.

Large bushfires in western Tasmania

Large bushfires in western Tasmania that started in mid-January continued to burn through February. Extra threats arose when winds strengthened then shifted southwesterly in the wake of a cold front on the 15th, testing containment lines on the northeastern flank of Mawbanna fire. Rain on the 25th provided some relief, but 25 fires with a perimeter of around 1000 km were still burning by the end of the month. A total of about 123 800 ha had been burnt, but there had been relatively little stock, building or vehicle losses.

Grass fire in Victoria

On the 23rd, a significant grass and scrub fire at Mount Bolton in the northwest of Ballarat destroyed some buildings and fences, while another fire near Somerville in the Frankston area destroyed part of the Stony Point train line, causing disruptions to services. Three houses were burnt in the fires.

Heavy Rain across southern South Australia

At the start of February, a deep low (ex-Tropical Cyclone *Stan*) crossed the Nullarbor, then tracked southeastward across the southern parts of the South Australia and western Victoria.

Heavy rain of 40 to 80 mm was recorded in the Nullarbor area, southern Eyre Peninsula and the Fleurieu Peninsula. The bulk of rain fell in less than three hours causing flash flooding at Port Lincoln and Victor Harbor. A shopping centre ceiling at Victor Harbor collapsed.

Heavy rain in Queensland

An active monsoon trough north of Australia directed a moist and unstable airmass over Queensland which produced widespread thunderstorms and heavy rainfall across much of the State at the start of the month, with over 50 mm rain in an hour recorded in numerous locations. Urandangi in the Georgina Catchment recorded over 160 mm rain in 3 hours on the 3rd, causing flash flooding. Aplin Weir in the Townsville area recorded 91 mm in 30 minutes, 128 mm in 1 hour, and 181 mm over 2 hours on the 8th. There were reports of hail over 2 cm in diameter at Narangba, North Lakes and Ocean View, northern suburbs of Brisbane metropolitan area on the 1st.

River gauges in the Georgina, Fitzroy and Condamine-Balonne catchments reached moderate flood levels, though no significant impacts reported.

Abnormally High Tides in the Queensland southeast coast

Ex-tropical cyclone *Winston*, though well off the Queensland coast, caused large and long period easterly swells, leading to dangerous surf conditions at beaches south of Sandy Cape on the 27th. Abnormally high tides occurred at exposed beaches between the Gold Coast and Sunshine Coast, and from Stradbroke to Moreton Islands.

Thunderstorms

An active west coast trough produced thunderstorms over the South West Land Division on the 27th and 28th. Storms accompanied by strong winds and heavy rain caused tree, fence and roof damage at Bruce Rock, while Dumbleyung Aerodrome recorded a gust of 104 km/h.

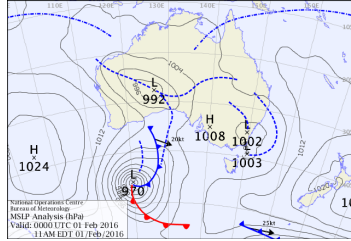

A severe thunderstorm produced a significant wind gust of 117 km/h at Dalby Airport, and 107 mm rainfall in an hour at Townson in the southeastern Queensland on the 19th.

Golf ball sized hail was reported in Queanbeyan and the ACT, causing damage to houses and vehicles on the 11th.

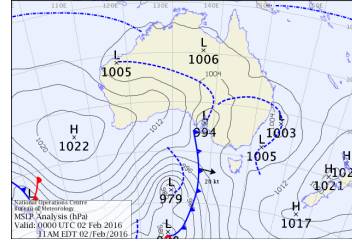

Severe thunderstorms in the Sydney and Hunter regions produced strong winds, large hail and heavy rain on the 20th. Wind gusts reached 133 km/h at High Range (Wanganderry). At least five light planes and several buildings were destroyed at Camden Airport, and reports of uprooted trees near The Oaks and Cobbity.

Synoptic summary

The month started with ex-tropical cyclone *Stan* moving across the southeast interior of Western Australia, then tracking over the agricultural districts of South Australia to reach western districts of Victoria by the 2nd. By the 6th, a high pressure system located over the southern Tasman Sea extended a ridge along the coast of New South Wales and southern Queensland. A band of middle and high level cloud extended along a trough from the northern Queensland coast to the Coral Sea and into a deep low pressure system located in the northern Tasman Sea.

By the middle of the second week of February, a low pressure system located over southern parts of Cape York Peninsula and a monsoon trough across the tropical north of the country generated extensive areas of cloud. Meanwhile, a high pressure ridge located to the south of the Great Australian Bight maintained mostly clear conditions across the southern interior with low cloud associated with a moist southeasterly flow across coastal South Australia, Victoria and Tasmania.

On the 11th, a low pressure system located in the Coral Sea deepened, developing into tropical cyclone

Tatiana on the 12th. *Tatiana* tracked south-southeast, remaining well off the Queensland coast. Meanwhile a weak cold front crossed southern coasts, ahead of a ridge of high pressure that extended across the Bight. On the 15th, another cold front and low tracked eastwards over the Tasman Sea generating a vigorous southwesterly air stream over Tasmania. The southwesterly air stream moderated as the system moved further into the Tasman Sea and a high pressure ridge became established the Great Australian Bight.

The last week of February saw a broad area of low pressure trigger an extensive area of cloud that extended from the inland areas of Western Australia across southern South Australia. A cold front moving across the Bight extended down to a low pressure system over the Southern Ocean. The month finished with high pressure tracking across the Bight and bringing broadscale scale southerly flow to coastal Tasmania, Victoria and New South Wales, while low pressure troughs extended across the tropics and ex-tropical cyclone *Winston* was located in the southern Coral Sea.

Temperatures

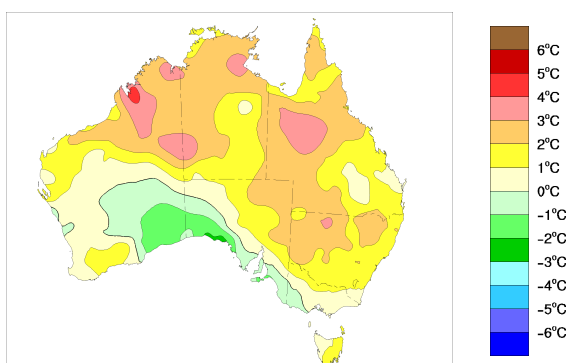

February 2016 was warmer than average for Australia, ranking as the ninth-warmest February on record. The national mean temperature was 0.92 °C above average and every State and Territory recorded above average maximum and minimum temperatures. Parts of northern Australia had their highest mean February temperature on record. Above average mean temperatures were recorded across the northern and eastern halves of the country. The only areas with below-average mean temperatures were the southeast of Western Australia and along the southern coast of South Australia.

The national mean minimum temperature was 0.41 °C above average, while the mean maximum temperature was 1.43 °C above the historical average.

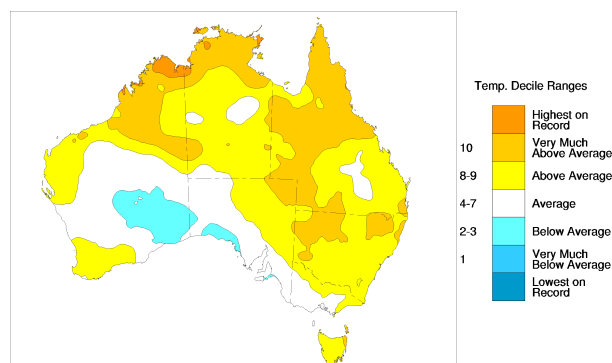

Maximum temperatures

Maximum temperatures for February were the highest on record in coastal parts of the Kimberley extending across into the Northern Territory and in isolated pockets of the eastern and western Top End. Well above average maximum temperatures were recorded in most of the northern part of Western Australia, the northern Top End, northern and western Queensland, across parts of northern New South Wales and in northeastern Tasmania. Above average maximum temperatures were recorded across the northern half and most of eastern Australia and southwest Western Australia. Below average maximum temperatures were recorded in the southeast of Western Australia and in an area along the south coast of South Australia.

Anomalies of mean daily maximum temperature in February 2016

Decile rank of mean daily maximum temperature in February 2016

The national mean maximum temperature was 1.43 °C above the historical average and the eighth-warmest on record for February. Queensland observed its sixth-warmest mean maximum February on record with an anomaly of +2.03 °C, and the Northern Territory had its eight-warmest mean maximum on record (+1.93 °C). All States and Territories recorded above average mean maximum temperatures for February.

February began with maximum temperatures in the western half of Australia well below average as ex-tropical cyclone *Stan* moved through the interior of Western Australia with large areas of the interior of the State recording anomalies of 12 °C below average. Prior to the system moving into South Australia the southern coastal parts of the State experienced a very hot day of up to 12 °C above average.

From the 3rd, maximum temperatures were well below average in western Queensland and the southeast of the Northern Territory due a trough in the far south and the eastern border regions. Over the next few days, cooler-than-average conditions prevailed over most of Australia. From the 6th to the 8th, the southern interior of Queensland was notably cooler than average as a slow moving surface trough produced heavy showers and thunderstorms.

Between the 7th and the 11th, the west and south coasts of Western Australia experienced hot conditions, with some temperatures at least 10 °C above the February average. The following day, a cool change moved through this area and brought some relief from the very hot conditions.

By mid-February, cool conditions persisted across the southern parts of the country. In contrast, abnormal heat developed over much of northern Australia particularly interior parts during the second half of the month; for more details see *Special Climate*

Statement 55 – prolonged March heatwave affects many parts of Australia.

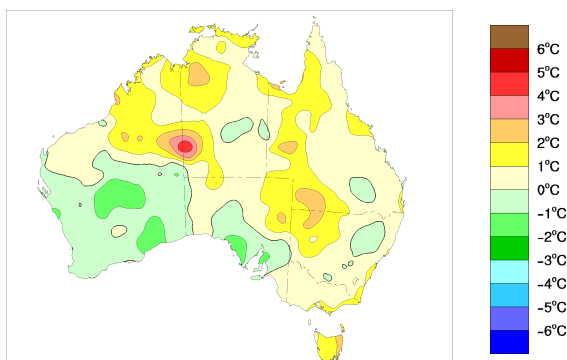

On the 23rd, much of Victoria experienced temperatures more than 12 °C above average with the heat extending across much of southeast Australia. From the 24th, areas of above average maxima were observed in northern Victoria, southern New South Wales and eastern South Australia, with the heat extending into eastern and central parts of New South Wales the following day. A cool westerly flow kept maximum temperatures well below average in the southern half of western Australia, the exposed western coast of South Australia, western Victoria and Tasmania.

Over the last few days of February, hot conditions persisted over the eastern interior and extended into Queensland for the remainder of the month. Daily maximum temperature records were broken in Queensland's central west (see page 13)t. Hot conditions also prevailed over the south west and southern parts of Western Australia.

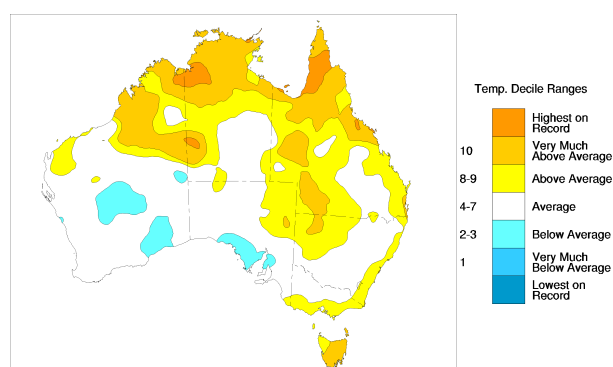

Minimum temperatures

Minimum temperatures for February were the highest on record in an area around the northern border of Western Australia and the Northern Territory, in the southwest of the Northern Territory, parts of Cape York Peninsula, and the north tropical coast of Queensland. Very warm minimum temperatures were observed in most of northern Western Australia across to the Top End and western parts of the Northern Territory, much of northern and western Queensland, and in most of Tasmania. Above average minimum temperatures were recorded in northwestern Tasmania, across most of northern Australia, including the Gascoyne coast in Western Australia, western parts of the Northern Territory, western Queensland, in a narrow band along the eastern seaboard and in southern Victoria.

Anomalies of mean daily minimum temperature in February 2016

Decile rank of mean daily minimum temperature in February 2016

Below average minimum temperatures were recorded in parts of the central interior and southeast of Western Australia, and in an area along the south coast of South Australia. Remaining parts of the continent recorded near-average minima.

The national mean minimum temperature was 0.41 °C above the historical average for February. Queensland had its equal sixth-warmest mean minimum February on record with an anomaly of +1.12 °C and Tasmania had its sixth-warmest mean minimum on record (+1.97 °C). All States and Territories recorded above average mean minimum temperatures for February.

February began with minimum temperatures in the western half of Australia well below average as ex-tropical cyclone *Stan* moved through the interior of Western Australia. Most notably, the southwest of Western Australia recorded minimum temperatures up to 10 °C below the February average. With the exception of Tasmania, southeastern South Australia and western parts of Victoria, much of southeastern Australia and southern Queensland observed cooler than usual minimum temperatures. Over the next few days, areas of cooler than normal minima expanded in Western Australia and South Australia as ex-tropical cyclone *Stan* tracked eastwards. Above average minima were experienced across much of Queensland, particularly over the southwest, and throughout the central interior of the continent and extending into Tasmania.

From the 3rd to the 5th, the minimum temperatures were above average across much of eastern Australia with particularly warm minimum temperatures experienced in Tasmania. During the 5th, as ex-tropical cyclone *Stan* continued to track eastwards, much of Western Australia and the Pastoral districts of South Australia experienced below average minima. Cooler than normal minimum temperatures were observed in large parts of New South Wales and

northern Victoria as a trough and cold front tracked over the southeast region.

Over the next few days, cooler-than-average conditions prevailed over the southwest of Western Australia and South Australia, and central parts of the country as far north as the Gulf of Carpentaria. From the 6th to the 8th, the southern interior of Queensland observed notably cooler than average minimum temperatures as a slow moving surface trough produced heavy showers and thunderstorms.

Between the 7th and 11th the area of cooler than average minima conditions contracted in the west and south coasts of Western Australia and from west of the Esperance Coast district and these areas began to experience above average minima. The 9th was particularly cool around Eucla. Only a few areas of cooler than average minima remained in the Northern and Southern Interior of Western Australia and in the coastal and adjacent inland parts near the border of South Australia.

Over the period of the 12th to the 15th, a broad area of below average minimum temperatures was

recorded across the southern parts of the country, associated with the passage of a cold front.

From the 10th to the 19th much of Queensland, and a large part of southern Australia, had minimum temperatures that were well below average. However, on the 16th a very warm night was recorded along the west coast of Western Australia.

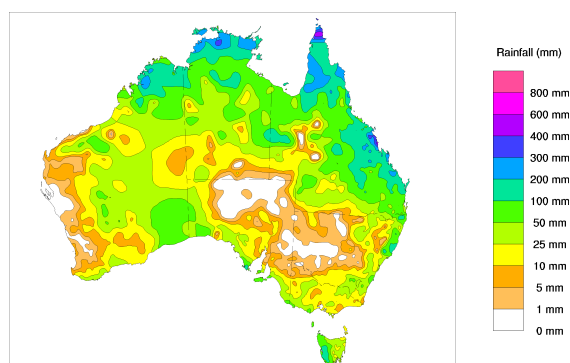

In the third week of February, most of the central parts of the country had above average minimum temperatures. Very warm minimum temperatures were observed in South Australia, western New South Wales and much of Victoria on the 23rd and 24th, where overnight temperatures exceeded 8 °C above average. Above average minima persisted throughout central and southeastern Australia, until the 25th.

The last few days in February saw an area of above average minima observed in southwest Western Australia, and across most of Queensland away from the east coast. In contrast a well below average minima were recorded in South Australia, the southern parts of the Northern Territory, and in western Victoria and western New South Wales.

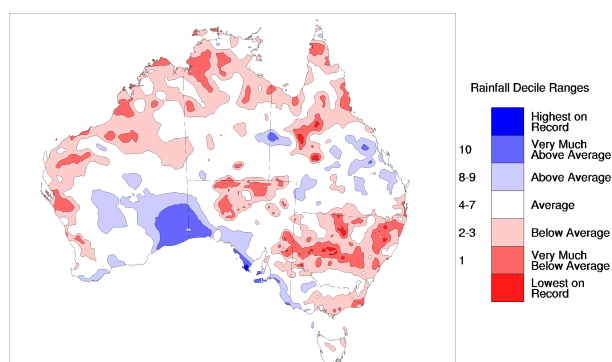

Rainfall

For Australia as a whole, February rainfall was 41 % below average. February rainfall was below average across northern Australia, with some parts recording their lowest February rainfall on record. Below average rainfall was also recorded across much of New South Wales, eastern Victoria, northern parts of South Australia and an area along the west coast of Western Australia, and pocket of central and northeastern Tasmania.

Total rainfall in February 2016

Decile rank of total rainfall in February 2016

Above average falls were recorded in southeast Western Australia and along the south coast and parts of northwest pastoral district of South Australia, as well as parts of central and far western Queensland. Remaining parts of the country received near-average rainfall for February.

At the beginning of the month, ex-tropical cyclone *Stan* tracked from the Pilbara, through the southeastern interior of Western Australia, and into the agricultural districts of South Australia. The remnants of the system brought moderate falls to a large strip from the northwest to southeast of Western Australia, and to the southern part of South Australia before the system decayed. An active

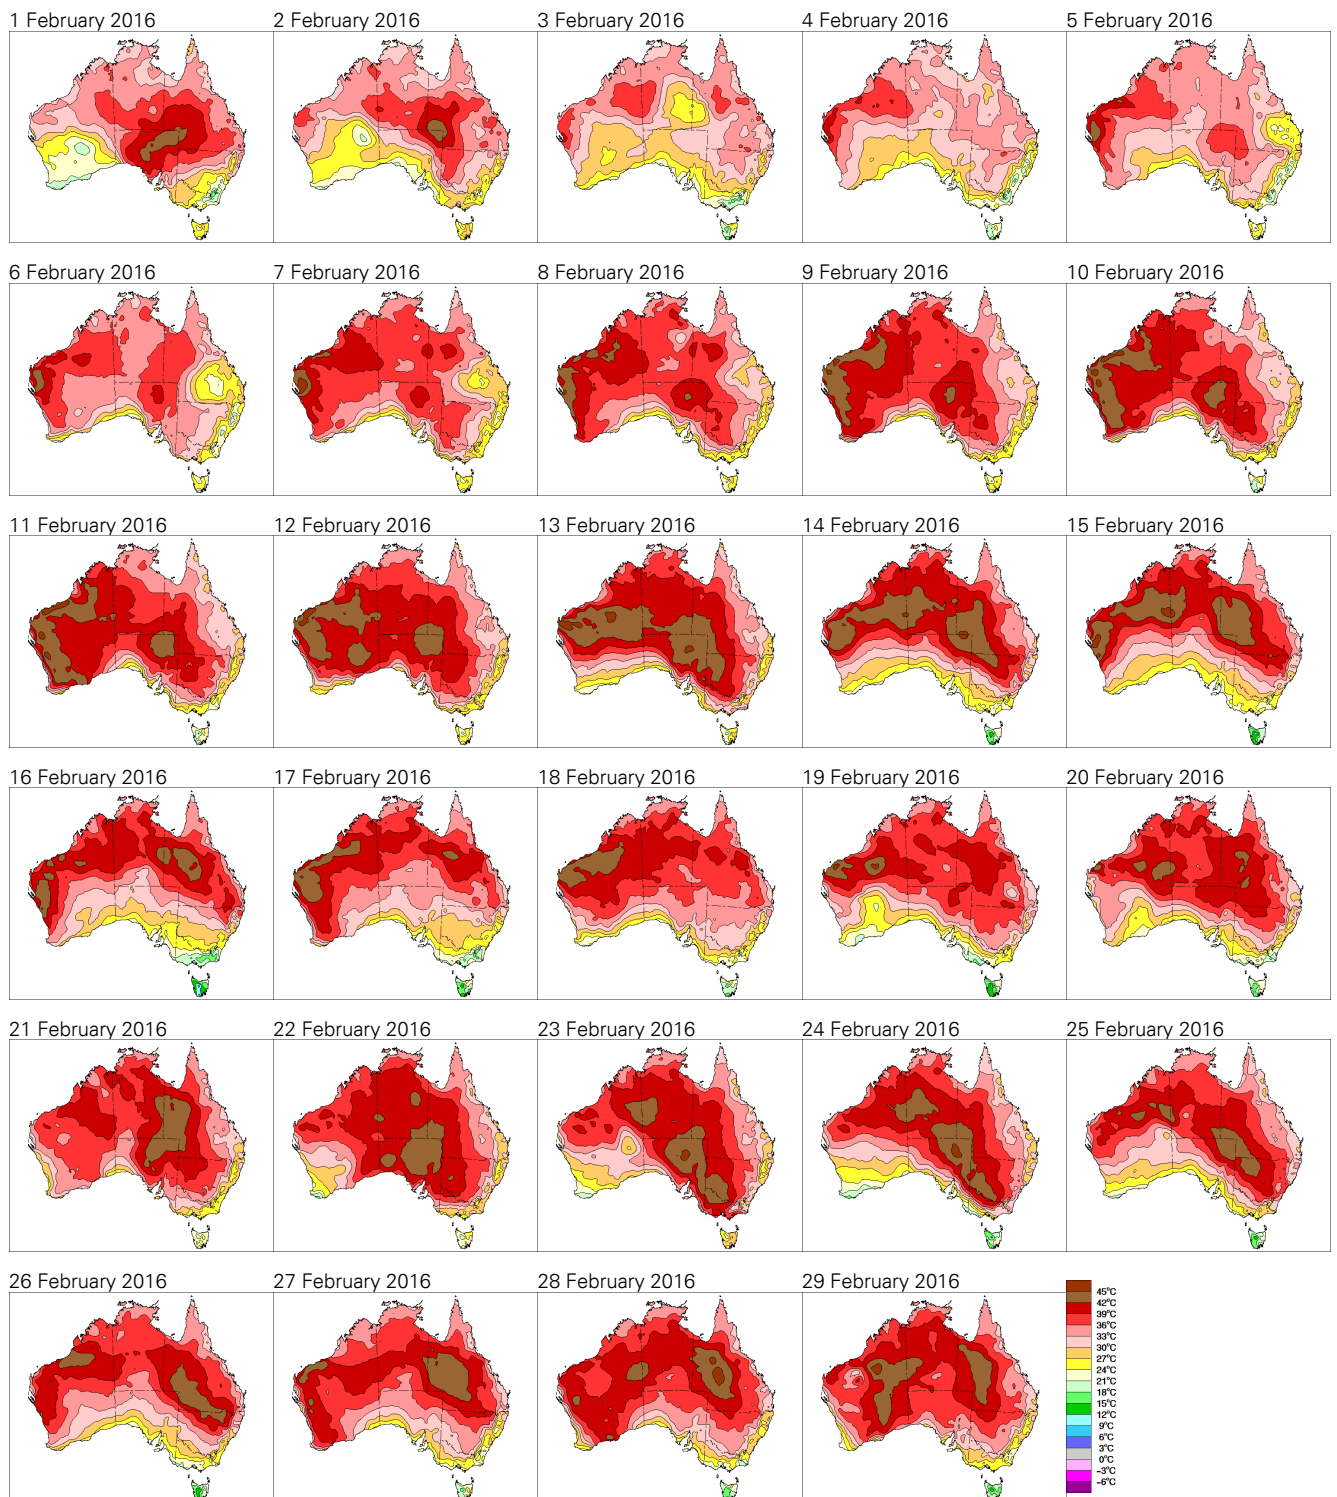

monsoon trough located across northern Australia brought embedded thunderstorms to northern Australia. A moist and unstable air mass over Queensland and New South Wales, with a deepening low pressure centre along an inland trough generating moderate falls across eastern Australia. Heavier falls were recorded in parts of the central and Wide Bay coasts on the 6th, and near the Herbert and Lower Burdekin in Queensland on the 8th as a low pressure system developed near the central Queensland coast and tracked slowly north.

On the 9th, the monsoon trough and a deepening tropical low over the Coral Sea brought extensive areas of shower and thunderstorm activity to the Cape York Peninsula, Gulf Country, Top End and Kimberley between the 11th and 16th. A tropical low intensified into tropical cyclone *Tatiana* late on the 11th, and although the system was located well offshore, moist onshore flow generated showers along the exposed parts of the southeast coast of Queensland. A vigorous southwesterly airstream across western Tasmania produced moderate falls in State's southwest between the 15th and 19th.

On the 19th, a surface trough extended from the Northern Territory, through inland Queensland and into New South Wales. The slow-moving system produced moderate falls in the southeast coast, Wide Bay and Burnett and Darling Downs districts in Queensland, and in northeastern New South Wales.

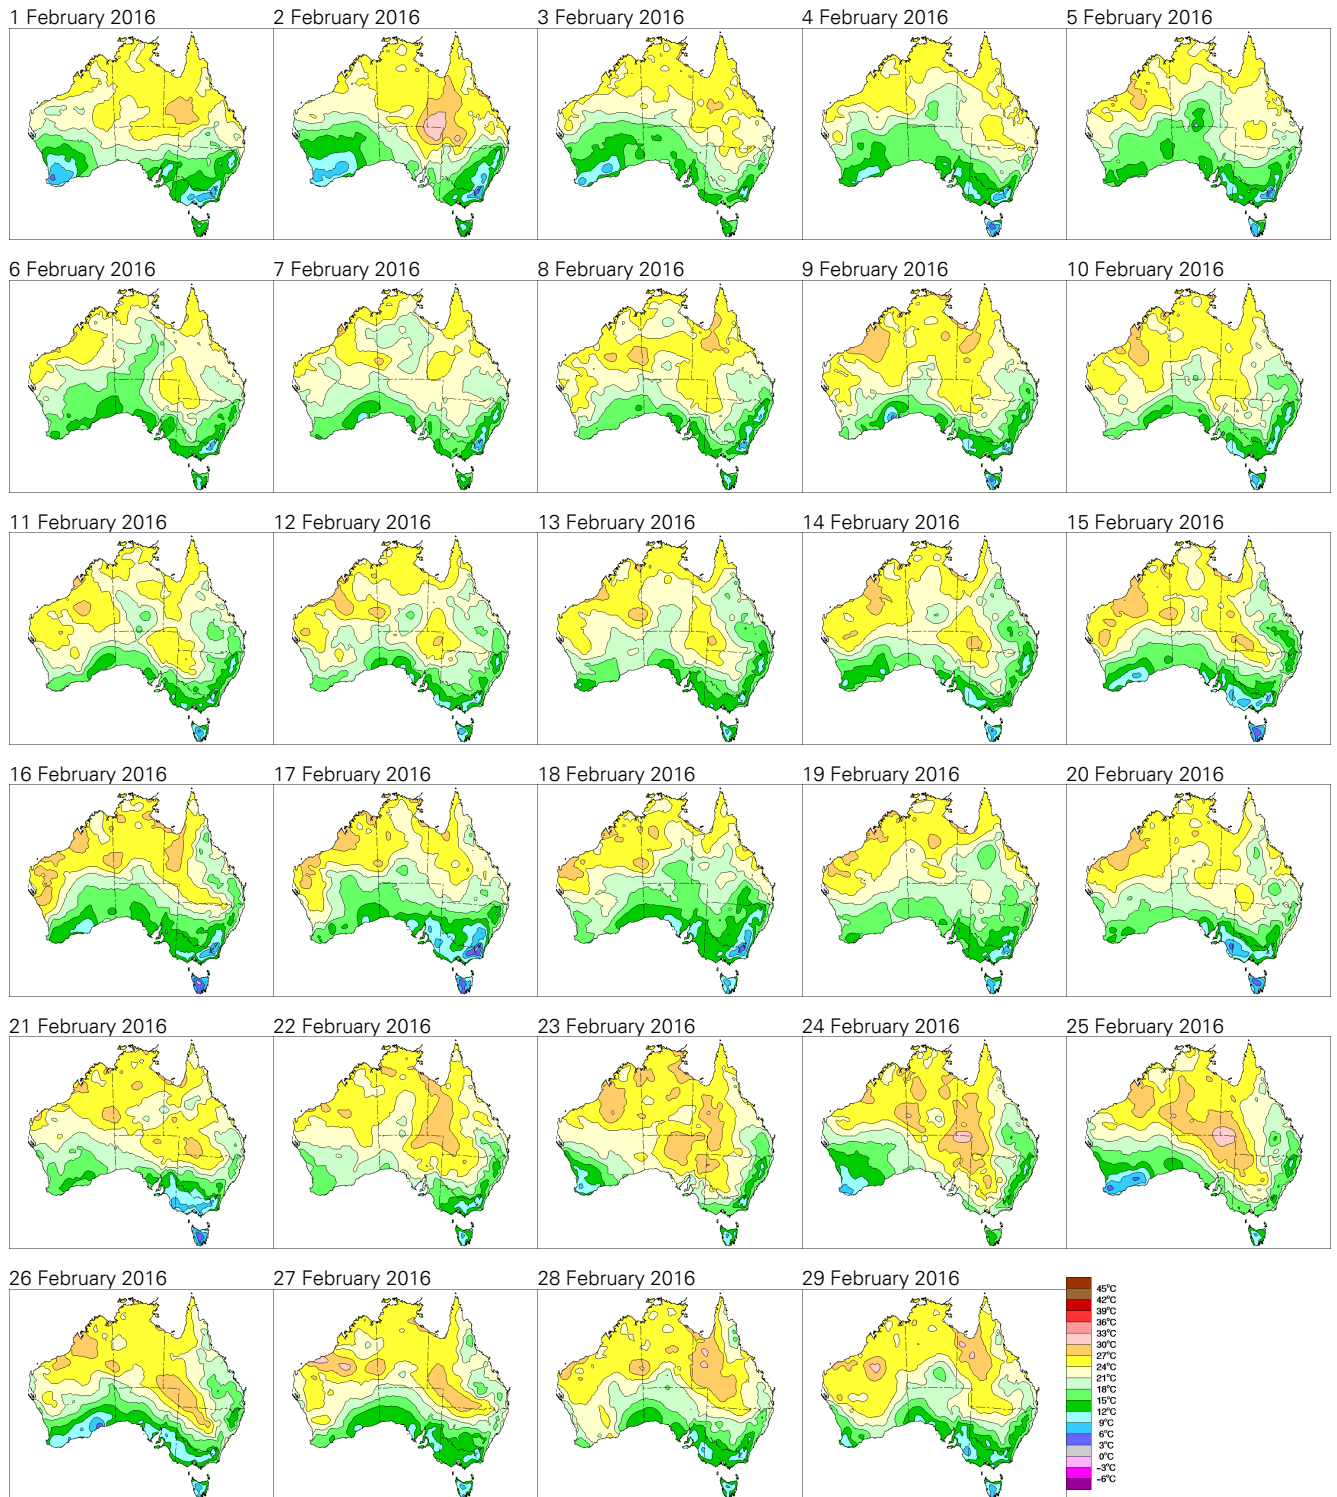

A broad area of low pressure extended from the inland areas of Western Australia and southern South Australia, delivering moderate rainfall totals to central and southeastern Western Australia, and along the south coast and adjacent inland districts of South Australia on the 24th. An upper-level trough over the north tropical coast on the 24th, and a surface trough located over the Coral Sea produced moderate to heavy falls in parts of northern Queensland, particularly between Cooktown and Innisfail. A broad area of low pressure produced thunderstorms and showers across the northern tropics from the 25th until the end of the month. In the south, a cold front tracked across the Bight, with a strong westerly flow producing moderate falls in southeastern South Australia, western Victoria, and western Tasmania on the 25th and 26th. At the end of the month a surface trough extended along the west coast of Western Australia, producing light to moderate rain in western parts of the State.

Daily maximum temperature maps

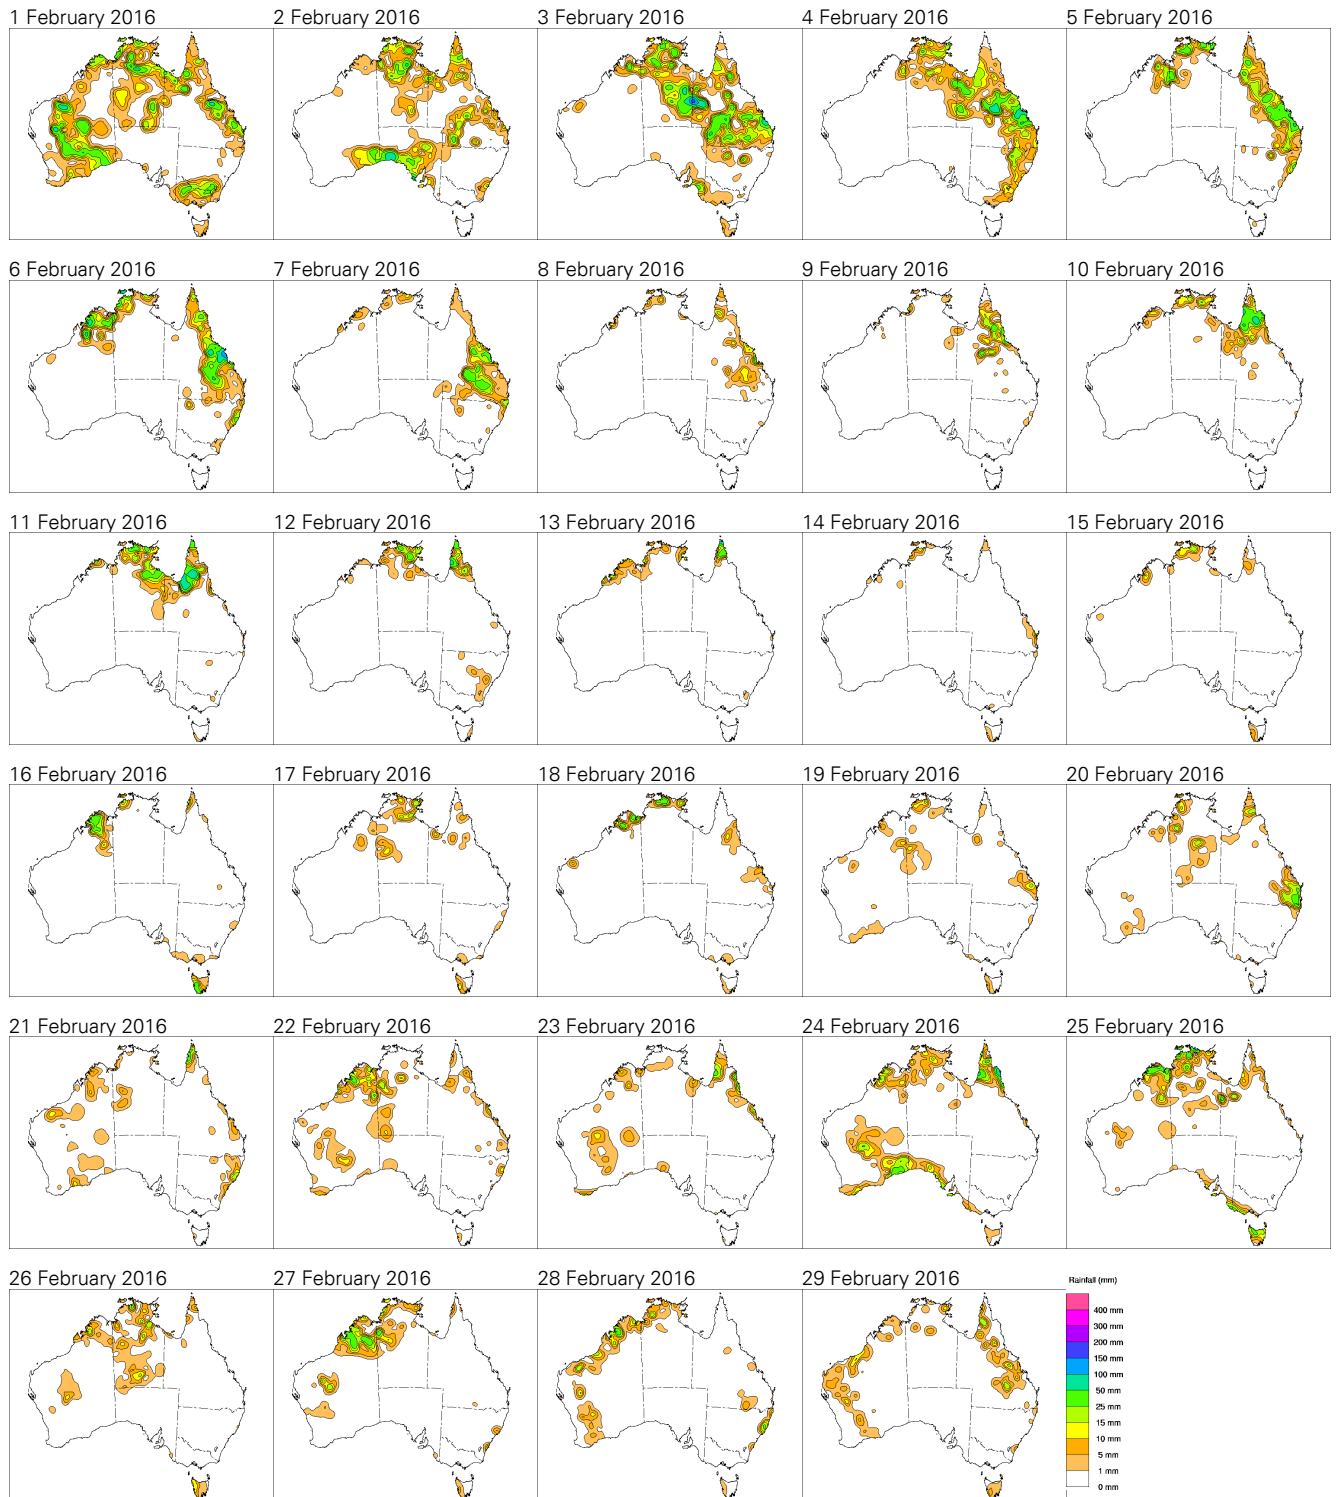

These maps are intended to give an overview of daily maximum temperature across the country. There could be discrepancies between the values shown on these maps and those at individual locations, as a result of the way the maps are generated. A wide range of maps of rainfall, temperature and other variables, covering the whole country and smaller regions can be found at www.bom.gov.au/climate/maps/.
