

# PROJECT WEB SITE

[www.pacificsealevel.org](http://www.pacificsealevel.org)

The SPSLCMP web site, [www.pacificsealevel.org](http://www.pacificsealevel.org) is a dynamic means of providing project data and information to all interested stakeholders.

Regularly updated and enhanced, the web site provides information on the project's history, directions, participants and contacts.

It makes access to the Seaframe and CGPS monitoring network environmental data and analysed "products", quick, easy and timely.

All of the project's newsletters, fact sheets, posters and technical presentations and papers are directly available from the site.

And the project site also links to other important international sites which can provide additional climate data and information.
