

## **Mark Jones (NBN Co Australia)**

### **Session 3: Further examples of good practice.**

#### **Title: Integrating Climate Science, Managing the Climate Change Transition**

As a critical infrastructure owner and operator, NBN Co recognises the inherent risks climate change poses to its operations, network continuity and service obligations. To support the Company's response to climate change, NBN Co is integrating climate change risks and opportunities into the Company's risk management approach, with climate change transition now recognised as a material business risk. This follows on from NBN Co completing its first Companywide climate change risk assessment.

This presentation looks at keyways NBN is leveraging climate data to support climate mitigation and adaptation activities.
