

## **David Grant (Bureau of Meteorology)**

### **Session 9b: Designing and delivering seamless services continued**

#### **Title: Operational experience in communicating low probability, but potential high impact events with emergency services stakeholders**

Disaster management stakeholders can be faced with making high consequence decisions during severe weather events. These critical decisions often need to be made in times of considerable uncertainty and therefore stakeholders will turn to the Bureau to support them in making evidence-based decisions. This talk will explore some of the elements in the delivery of communicating low-probability, but potentially high impact events with disaster management stakeholders based on operational experience from the Bureau's embedded representative in the State Disaster Coordination Centre in Queensland.
