

## **Heather Rumbold, UK Met Office**

Bio:

Heather is a senior scientist working in the Boundary Layer & Surface Processes Team at the UK Met Office. Her main role is to develop and improve the Met Office land surface model (JULES) within the Unified Model. Recent activities include developing and implementing soil tiling and irrigation parameterisations for inclusion in JULES. Heather is the JULES configuration manager, responsible for developing the standalone physical land model configuration and maintaining the comprehensive land benchmarking system.
