

Marcus Thatcher, CSIRO Environment

Marcus has worked with regional climate models at CSIRO Environment for the past 20 years and currently leads the CSIRO High Resolution Climate Modelling team. He leads the development of the conformal cubic atmosphere model (CCAM) and has interests in developing regional Earth system components for regional climate models. Marcus is the Australasian point-of-contact for the WCRP coordinated regional climate downscaling project (CORDEX) and is a member of the GAW Urban Research Meteorology and Environment SAT. Marcus also has been involved in national and state climate projection projections, with the most recent being the Australian Climate Service.
