

Water Reporting Summary – Barwon–Darling Watercourse

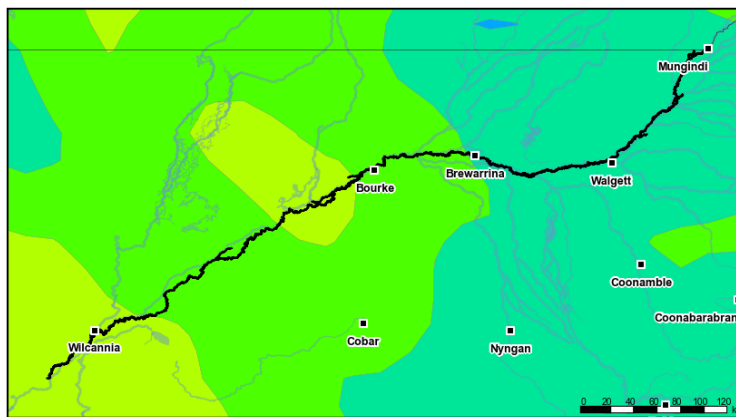

15 April 2021

Overview

- In the last month, there has been widespread rainfall across the Barwon–Darling Watercourse with upstream areas receiving 100 to 200 mm of rainfall. Downstream areas of the Watercourse received 50 to 100 mm of rainfall, while the south western part of the catchment received less than 50 mm (Figure 1). This is similar to the rainfall pattern reported in the previous Water Reporting Summary. The total area-average rainfall for the Watercourse was 79 mm, with more than half of this rainfall received on 22nd and 23rd of March. The rainfall in the last month is in the context of the extended dry period since January 2017 with rainfall for most areas of the Barwon–Darling Watercourse being below average, and areas upstream of Brewarrina mainly being very much below average (Figure 2).
- Recent rainfall has resulted in very much above average root zone soil moisture for the upstream parts of the Watercourse, while the middle and downstream parts had above average soil moisture. Rainfall in the last month has translated into significant runoff and increases in streamflow (Figure 3). The drought status has eased from Stage 2 to Stage 1 for the Barwon–Darling Watercourse. In Drought Stage 1, surface water can deliver all account water under normal river operations practice (NSW DPIE).
- Water resources are shared between water users according to a water sharing plan, with entitlements on issue shown in Table 1. However, the ability of water users to take water is governed by entitlement conditions which are subject to river flow conditions. With limited water resources available, there has been limited recent water trading activity (Table 2).

Who is the water for?

As the Barwon–Darling Watercourse is an unregulated system, water is not stored for the purpose of supplying orders to downstream users. Water is shared between different users according to the *Water Sharing Plan for the Barwon–Darling Unregulated and Alluvial Water Sources 2012* (NSW DPIE). The plan includes categories of water licences or entitlements and the share of the water resource for each entitlement category (expressed as a nominal volume). Entitlements on issue as at 1 July 2020 are shown in Table 1. This does not necessarily represent water that is actually available to licence holders at a given point in time as each licence category has conditions that govern when water can be taken.

Table 1: Nominal volumes of water entitlements on issue, per licence categories (GL) for the 2020–21 water year (last updated 1 July 2020)

Entitlement category	Entitlement share (Nominal GL)
Town, Domestic & Stock	6.6
Unregulated River – Consumptive	161.5
Unregulated River – Environmental	28.6
