

Water Reporting Summary – NSW Murray and Lower Darling Catchments

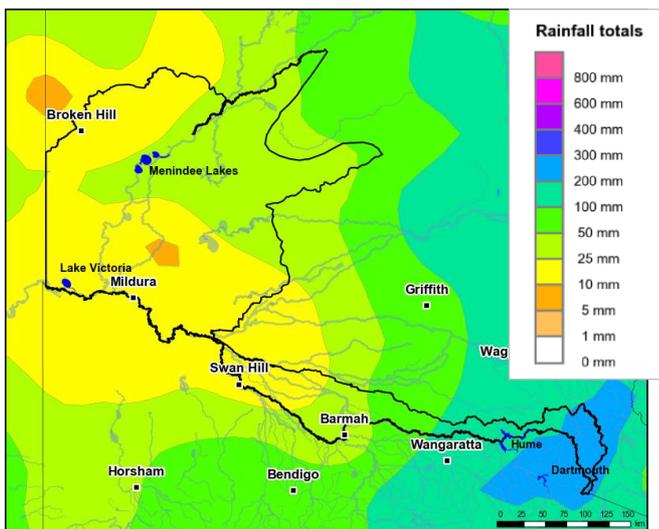

15 February 2021

Overview

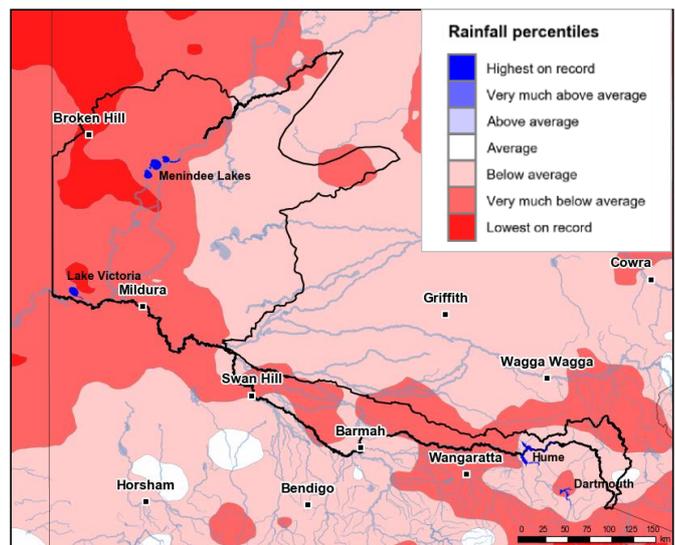

- In the past month, eastern areas of the NSW Murray catchment, including upstream of Hume Dam, received up to 300 mm of rainfall. Moving west, rainfall decreased with central areas receiving mainly 50 to 200 mm and most downstream areas receiving less than 25 mm of rain. Similarly, north-eastern areas of the Lower Darling catchment received 25 to 50 mm of rainfall, with most other areas of the catchment receiving 10 to 25 mm (Figure 1). The total area-average rainfall across both catchments was 36 mm, with three-quarters of this rainfall received in the last week of January. This recent rainfall is in the context of the extended dry period since January 2017, with rainfall mainly very much below average for most areas of the NSW Murray and Lower Darling catchments. For the western areas of the Lower Darling catchment, rainfall has been lowest on record (Figure 2).
- In the last month, root zone soil moisture was mainly average across the catchments, except for the upper NSW Murray catchment and eastern areas of the Lower Darling catchment which had above average soil moisture. Recent rainfall in the last month has translated into some runoff and inflows into storages (Figure 3), however, Drought Stage 2 conditions remain in the Lower Darling catchment. In Drought Stage 2 (emerging drought or drought recovery), there has been limited water resources and multiple years of low flows (NSW DPIE). As there has been only limited improvement in water resources, allocations for some entitlement holders remain low (Figure 4 and Table 1).
- General security allocations in the NSW Murray and Lower Darling catchments are currently 50% and 30% respectively. Announced allocations (including carryover) for the NSW Murray are the highest since 2017–18, for this time of year.
- Allocation prices in the NSW Murray are currently \$96 per ML (Table 1), which are lower than prices paid in January (\$140 per ML) and well below prices paid at the same time last year (\$630 per ML).

Figure 2: Rainfall percentiles since January 2017 (compared to 1900–2019 long-term average) (Jan 2017 to Jan 2021)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia.

How much water is in the storages?

Combined total storage (NSW share*): 2 256 GL (as at end of Jan 2021)

*New South Wales' share of Dartmouth, Hume, Lake Victoria and Menindee Lakes storages

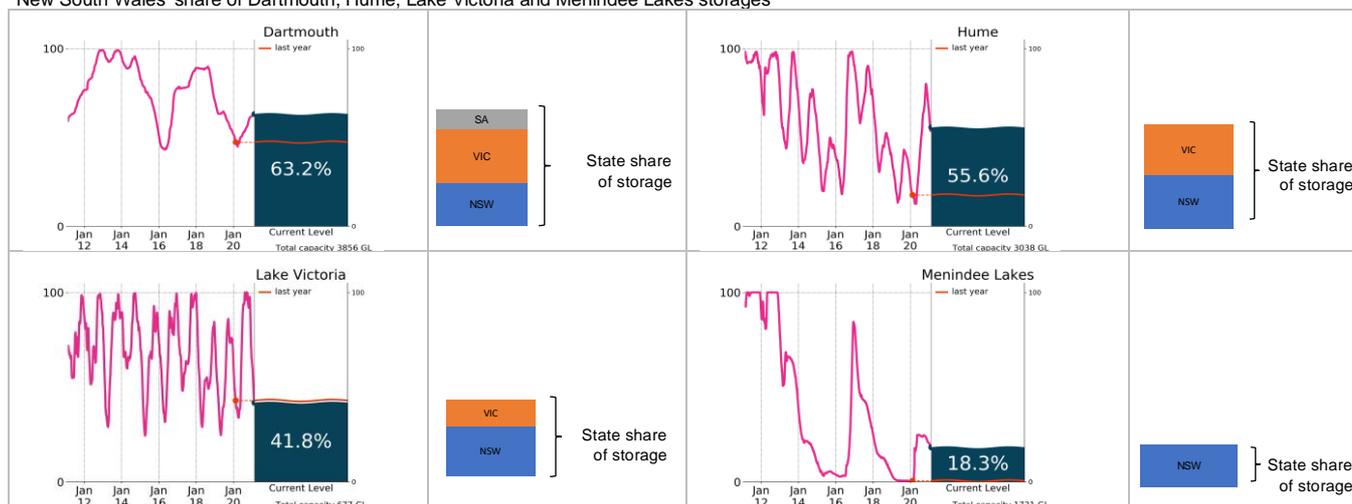

Figure 3: Current total storage (% of total capacity) as at 13 February 2021 compared to the last ten years (State shares updated end Jan 2021)

NB: Allocation information shown here is water allocated for various purposes as at 15 February 2021. It does not represent remaining available allocated water as it does not allow for water used, traded or new storage inflows (in excess of minimum assumptions).

Table 1: Allocation announcements (%) and market prices – selected licence categories as at 15 February 2021

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement prices (monthly median)	Allocation price (median – last 7 days)
Stock and Domestic	100%	Same as most years	n/a	\$96/ML (NSW Murray)
NSW Murray High Security	97%	Same as most years	\$7 350/ML*	
Lower Darling High Security	100%	Same as most years	n/a	
NSW Murray General Security	50%	Highest allocation (including carryover) for this time of year since 2017–18	\$1 825/ML*	n/a (Lower Darling)
Lower Darling General Security	30%	Highest allocation in since 2017–18	n/a	
Average Carryover (General Security)	21% (NSW Murray) 48% (Lower Darling)	19% last year (NSW Murray) 19% last year (Lower Darling)	n/a	

*Indicative - limited trade data
