

# Water Reporting Summary – Murrumbidgee Catchment

15 January 2021

## Overview

- In the last 30 days, most upstream areas of the Murrumbidgee catchment received 50 to 100 mm of rainfall. The central and downstream areas of the catchment mostly received 25 to 50 mm, with some areas near Jerilderie and south of Hay receiving less than 25 mm of rainfall (Figure 1). The total area-average rainfall for the catchment was 46 mm. This recent rainfall is in the context of the extended dry period since January 2017 with rainfall across the Murrumbidgee catchment mostly below average or very much below average (Figure 2).
- Recent rainfall has helped to maintain above average root zone soil moisture for most of the upper Murrumbidgee catchment, and average elsewhere in the catchment. The recent rainfall has translated into runoff and inflows into storages (Figure 3).
- Announced allocations for general security entitlement holders have reached 100%, which, for this time of year, is the highest since 2016–17 (Figure 4 and Table 1).
- Allocation prices are currently \$100 per ML, which is the same as December but well below prices paid at the same time last year (\$775 per ML) (Table 1).

## Recent conditions

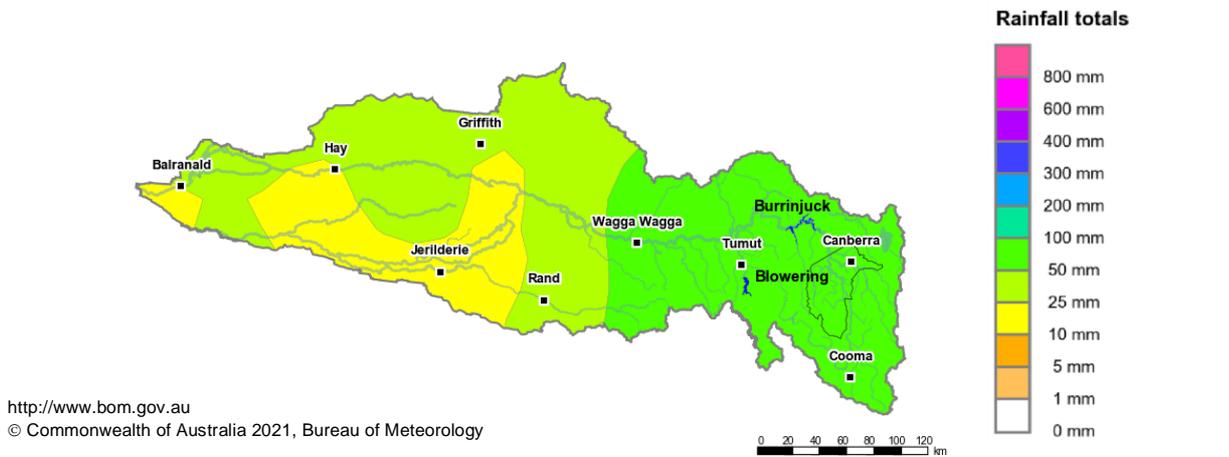

Figure 1: Rainfall totals for the last 30 days (17 Dec to 15 Jan 2021)

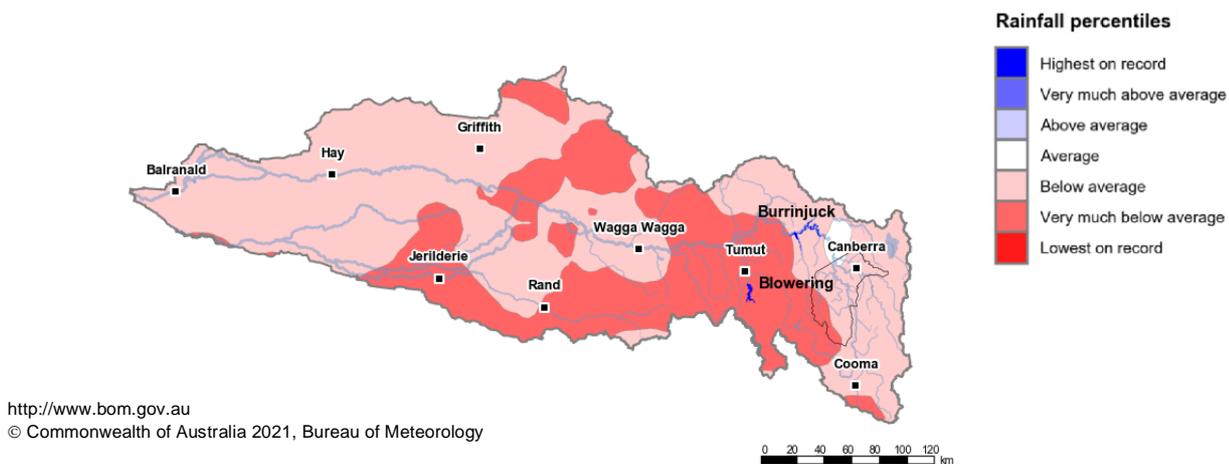

Figure 2: Rainfall percentiles since January 2017 (compared to 1900–2019 long-term average) (Jan 2017 to Dec 2020)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia.

# How much water is in the storages?

Storage volume: Burrinjuck, Blowering storages as at 15 January 2021

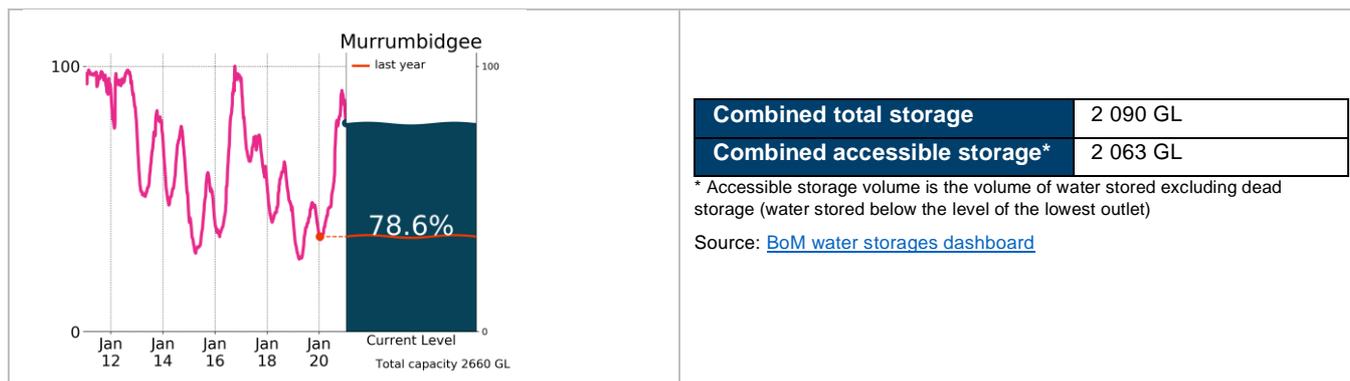

Figure 3: Current total storage (% of total capacity) compared to the last ten years.

## Who is the water for?

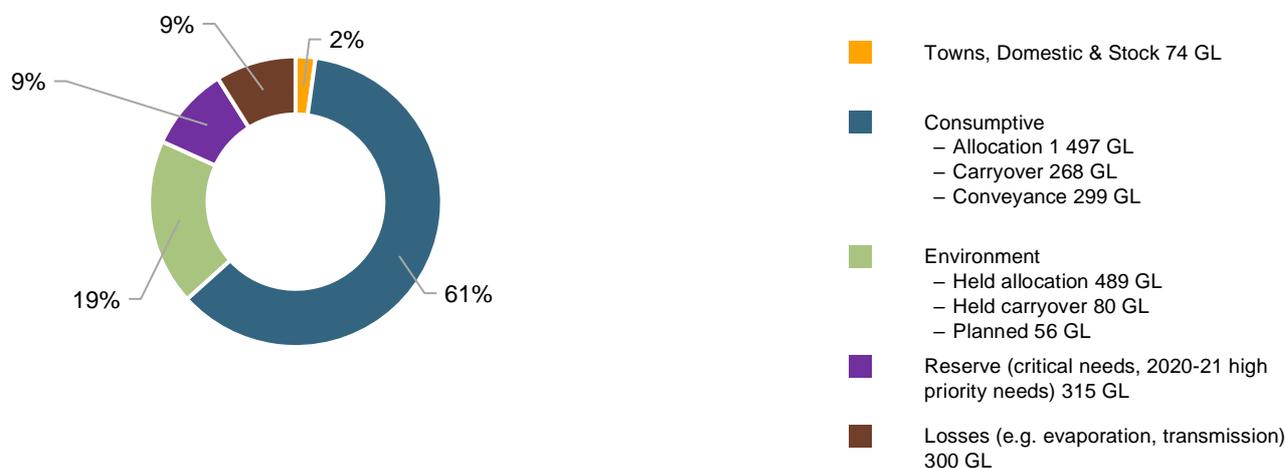

Figure 4: Volumes of water allocated (% of total) for the 2020–21 water year (as at 15 January 2021)

NB: Allocation information shown here is water allocated for various purposes as at 15 January 2021. It does not represent remaining available allocated water as it does not allow for water used, traded or new storage inflows (in excess of minimum assumptions).

Table 1: Allocation announcements (%) and market prices – selected licence categories as at 15 January 2021

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement prices (monthly median)	Allocation price (median – last 7 days)
Stock & Domestic	100%	Same as most years	n/a	\$100/ML
High Security	100%	Same as most years	n/a	
General Security	100%	Highest allocation for this time of year since 2016–17	\$2 000/ML*	
Average Carryover (General Security)	18%	10% higher than the previous year	n/a	

\*Indicative - limited trades
