

Water Reporting Summary – Namoi Catchment

15 January 2021

Overview

- In the last month, most of the central Namoi catchment received 100 to 200 mm rainfall, while eastern areas of the catchment near Chaffey Dam and Keepit Dam and east of Tamworth received up to 300 mm. In contrast areas in the far west of the catchment near Walgett received 50 to 100mm (Figure 1). The total area-average rainfall across the catchment was 173 mm for the last 30 days. This recent rainfall is in the context of the extended dry period since January 2017 with rainfall across the Namoi catchment very much below average or lowest on record (Figure 2).
- In the last month, the root zone soil moisture across most of the upper and central Namoi catchment was very much above average, with downstream areas having above average soil moisture. The recent rainfall has increased runoff and inflows into storages (Figure 3), with Drought Stage 2 conditions being downgraded to Drought Stage 1 conditions. With improvements in water availability (Figure 4), there has been some water trading activity with allocation prices of \$200 per ML (Table 1).
- Announced allocations for general security entitlement holders in the Upper Namoi and Lower Namoi are currently 100% and 31.7% respectively. Allocations for general security entitlement holders in the Peel increased to 16% (Table 1).

Recent conditions

Figure 1: Rainfall totals for the last 30 days (17 Dec to 15 Jan 2021)

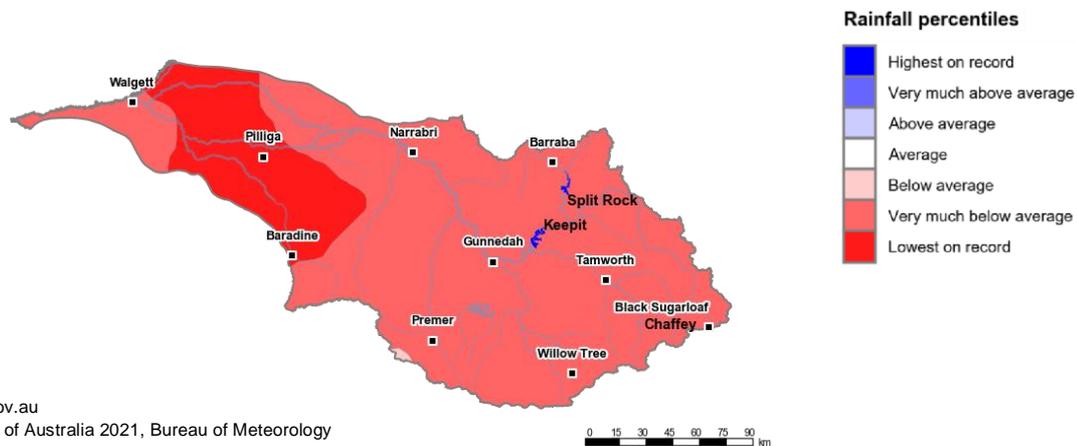

Figure 2: Rainfall percentiles since January 2017 (compared to 1900–2019 long-term average) (Jan 2017 to Dec 2020)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia

How much water is in the storages?

Storage volume: Split Rock, Keepit and Chaffey storages as at 15 January 2021

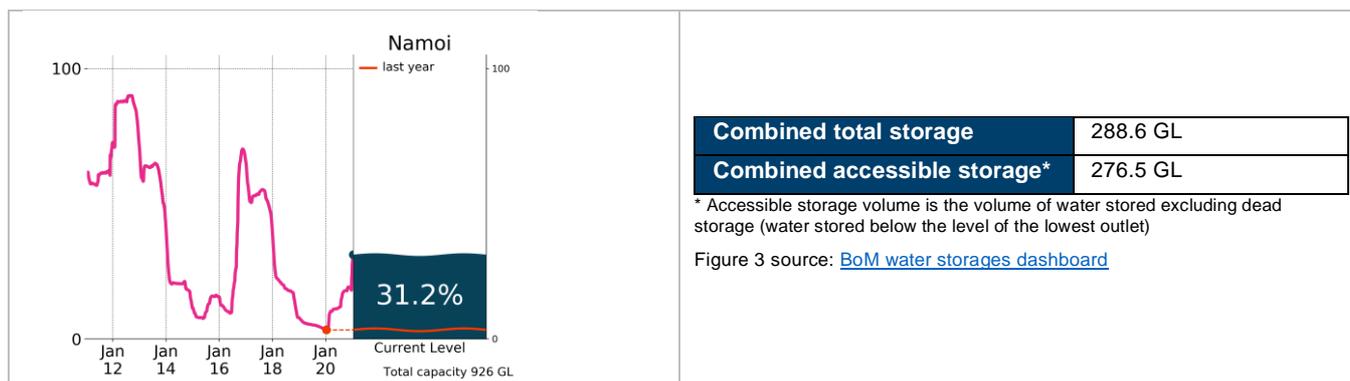

Figure 3: Current total storage (% of total capacity) compared to the last ten years

Who is the water for?

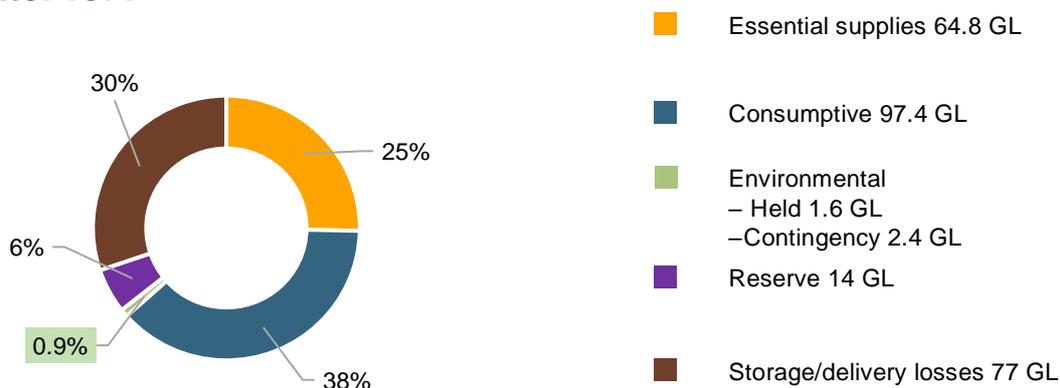

Figure 4: Volumes of water allocated (% of total) for the 2020–21 water year (last updated 13 January 2021)

NB: Allocation information shown here is water allocated for various purposes in the Upper Namoi and Lower Namoi regulated river water sources as at 13 January 2021, and the Peel regulated river water source as at 14 January 2021. It does not represent remaining available allocated water as it does not allow for water used, traded or new storage inflows (in excess of minimum assumptions).

Table 1: Allocation announcements (%) and market prices – selected licence categories as at 15 January 2021

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement prices (monthly median)	Allocation price (median – last 7 days)
Stock & Domestic, Local Utility	100% (Upper & Lower Namoi) 100% (Peel)	Typically 100%	n/a	n/a (Lower Namoi) \$200/ML* (Upper Namoi)
High Security	100% (Upper & Lower Namoi) 50% (Peel)	Typically 100%	n/a	
General Security	100% (Upper Namoi) 31.7% (Lower Namoi) 16% (Peel)	For Lower Namoi, the highest allocation for this time of year since 2016-17. For the Peel, first allocation since 2018-19.	n/a	
Average Carryover or Starting balance on 1 July (General Security)	40% (Upper Namoi) 6% (Lower Namoi) n/a (Peel)	23% last year (Upper Namoi) 5% last year (Lower Namoi) n/a (Peel)	n/a	

*Indicative - limited trade data
