

Water Reporting Summary – Victorian Murray Catchment

15 January 2021

Overview

- In the past month, total rainfall decreased from east to west in the Victorian Murray catchment. The upstream areas of the catchment, including areas near Hume Dam received 50 to 100 mm of rainfall, while central areas received between 10 to 50 mm. Lower catchment areas near Lake Victoria and Mildura received less than 25 mm (Figure 1). The area-average rainfall for the catchment was 57 mm. This recent rainfall is in the context of the extended dry period since January 2017 with rainfall across the Victorian Murray catchment mostly below average or very much below average (Figure 2).
- Root zone soil moisture is average across most of the catchment with recent rainfall translating into some runoff and inflows into storages (Figure 3).
- Announced allocations for high-reliability water shares are currently 96% which is 40% higher than the same time last year (Table 1). Allocation prices are currently \$150–\$200 per ML (Table 1) which are similar to December prices but significantly lower than the same time last year (\$650–\$850 per ML).

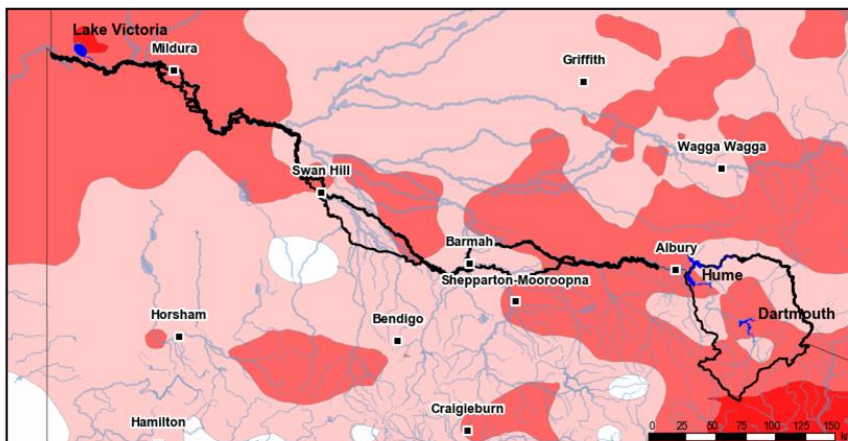

Recent conditions

Rainfall totals

Figure 1: Rainfall totals for the last 30 days (17 Dec to 15 Jan 2021)

Rainfall percentiles

Figure 2: Rainfall percentiles since January 2017 (compared to 1900–2019 long-term average) (Jan 2017 to Dec 2020)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia.

How much water is in the storages?

Combined total storage (Vic share*): 2 331 GL (as at end of Dec 2020)

*Victoria's share of Dartmouth, Hume, Lake Victoria and Menindee Lakes storages

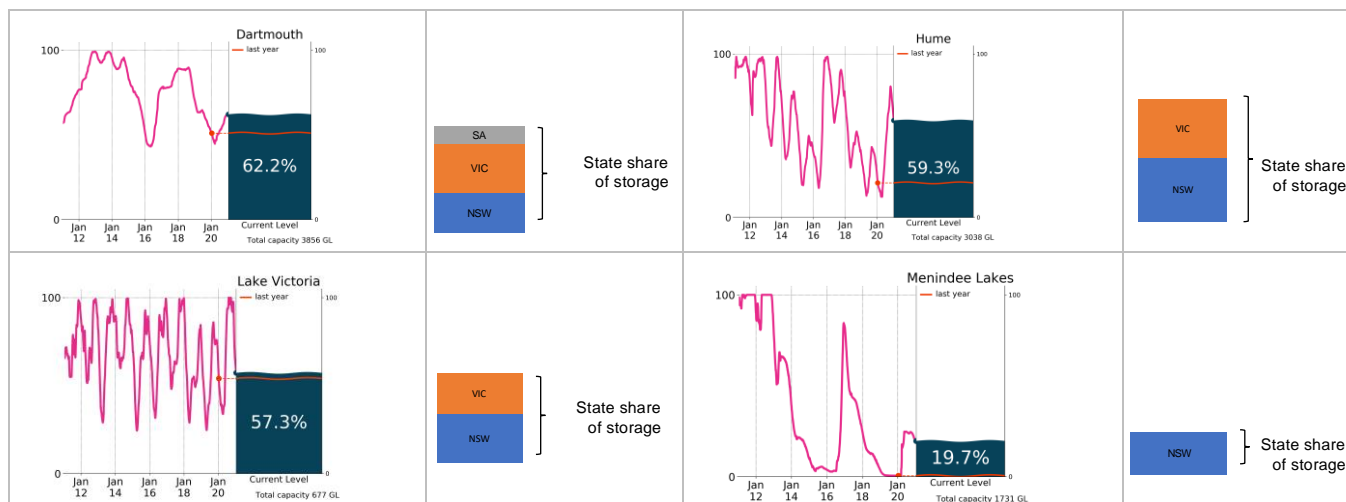

Figure 3: Current total storage (% of total capacity) as at 15 January 2021 compared to the last ten years (State shares updated end Dec 2020)

Who is the water for?

Figure 4: Volumes of water allocations currently available/remaining (% of total remaining) (as at 15 January 2021)

Source: [Northern Victoria Resource Manager](#)

NB: Allocation information shows water available in allocation accounts and remaining commitments as at 15 January 2021. Information published by the Northern Victoria Resource Manager differs from information published on the Victorian Water Register as the former includes preliminary environmental water holder use and volumes of operational use by Goulburn-Murray Water private water shareholders.

Table 1: Allocation announcements (%) and market prices – selected licence categories as at 15 January 2021

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement prices (monthly median)	Allocation price (median – last 7 days)
Vic Murray High-Reliability Water Share	96%	56% last year	\$4 500 (Zone 6) \$6 000/ML (Zone 7)	\$150/ML (Zone 6) \$200/ML (Zone 7)
Vic Murray Low-Reliability Water Share	0%	Same as most years	\$375/ML (Zone 6) \$900/ML (Zone 7)	

Zone 6: Upper Victorian Murray (Dartmouth to Barmah); Zone 7 is lower Victorian Murray (Barmah to SA border)
