

# Water Reporting Summary – Barwon–Darling Watercourse

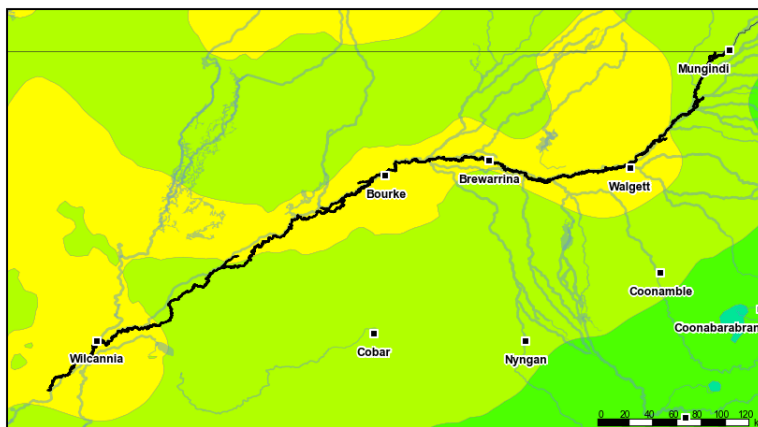

15 June 2021

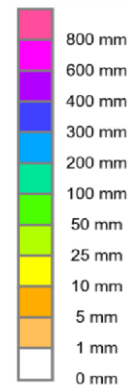

## Overview

- In the last month, most of the Barwon–Darling Watercourse received 10 to 25 mm of rainfall, while areas around Mungindi received up to 50 mm of rainfall (Figure 1). The total area-average rainfall for the Watercourse was 24 mm, with more than half of this rainfall received on 3rd of June. The rainfall in the last month is in the context of the extended dry period since January 2017 with rainfall for most areas of the Barwon–Darling Watercourse being below average, and areas upstream of Brewarrina mainly being very much below average and lowest on record (Figure 2).
- In the last month, the root zone soil moisture was average to above average in the Watercourse except for areas south of Bourke and around Wilcannia, where soil moisture was below average. The recent rainfall has not translated into runoff and, consequently, the discharge level in the Darling river has seen a considerable decrease (Figure 3). Currently, there are Drought Stage 1 conditions for the Barwon–Darling Watercourse. In Drought Stage 1, surface water can deliver all account water under normal river operations practice (NSW DPIE).
- Water resources are shared between water users according to a water sharing plan, with entitlements on issue shown in Table 1. However, the ability of water users to take water is governed by entitlement conditions which are subject to river flow conditions. With limited water resources available, there has been limited recent water trading activity (Table 2).

## Recent conditions

Figure 2: Rainfall percentiles since January 2017 (compared to 1900–2019 long-term average) (Jan 2017 to May 2021)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia.

# How much water is in the river?

**Darling River at Wilcannia**

**Darling River at Bourke**

## Who is the water for?

As the Barwon–Darling Watercourse is an unregulated system, water is not stored for the purpose of supplying orders to downstream users. Water is shared between different users according to the *Water Sharing Plan for the Barwon–Darling Unregulated and Alluvial Water Sources 2012* (NSW DPIE). The plan includes categories of water licences or entitlements and the share of the water resource for each entitlement category (expressed as a nominal volume). Entitlements on issue as at 1 July 2020 are shown in Table 1. This does not necessarily represent water that is actually available to licence holders at a given point in time as each licence category has conditions that govern when water can be taken.

Table 1: Nominal volumes of water entitlements on issue, per licence categories (GL) for the 2020–21 water year (last updated 1 July 2020)

Entitlement category	Entitlement share (Nominal GL)
Town, Domestic & Stock	6.6
Unregulated River – Consumptive	161.5
Unregulated River – Environmental	28.6
