

# Water Reporting Summary – Namoi Catchment

15 June 2021

## Overview

- In the last month, there has been rainfall across the Namoi catchment with the upstream two-thirds of the catchment, including the catchments of Keepit, Split Rock and Chaffey Dams, receiving 50 to 100 mm of rainfall; the area downstream of Baradine to downstream of Pilliga receiving 25 to 50 mm and the remaining area around Walgett receiving 10 to 25 mm of rainfall (Figure 1). The total area-average rainfall across the catchment was 62 mm for the last 30 days. This rainfall is in the context of the extended dry period since January 2017 with rainfall across the catchment mainly very much below average except for the central part with below average rainfall and some areas in the west having lowest on record rainfall (Figure 2).
- In the last month, the root zone soil moisture across the upstream two-thirds of the catchment was above average with the rest of the catchment having average soil moisture levels. The recent rainfall has had a positive effect on runoff and inflows into storages (Figure 3) which has improved the water availability (Figure 4).
- Announced allocations for general security entitlement holders in the Upper Namoi are currently 100% and for the Lower Namoi have increased to 90.5%. Allocations for general security entitlement holders in the Peel are at 84% (Table 1).
- There has been some water trading activity with allocation prices of \$160 per ML, which is similar to prices paid last month (\$150 per ML) and slightly below prices paid at the same time last year (\$200 per ML) (Table 1).

## Recent conditions

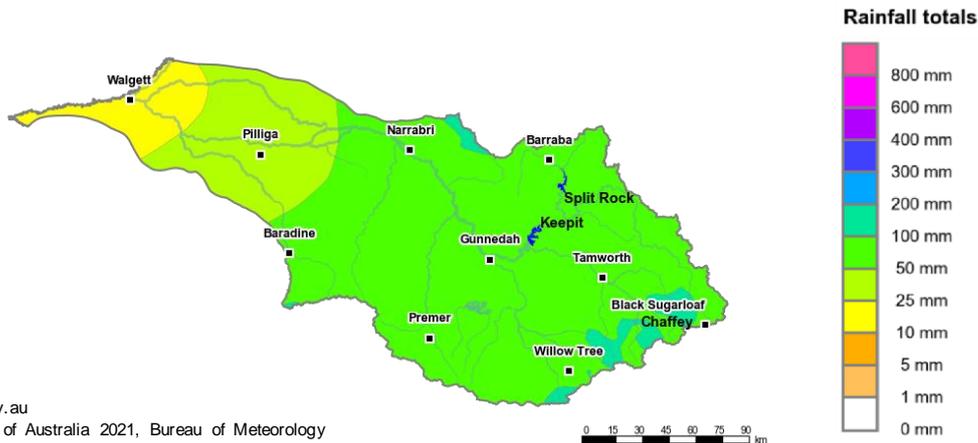

Figure 1: Rainfall totals for the last 30 days (17 May to 15 June 2021)

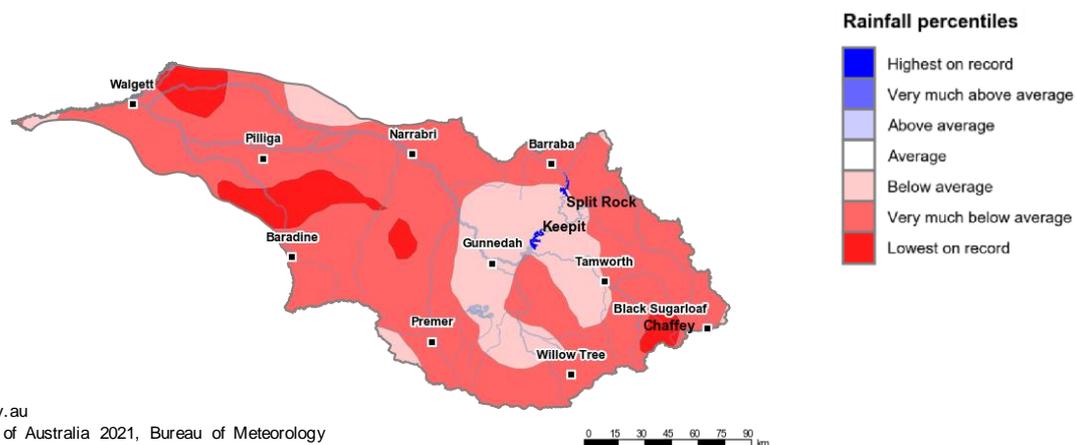

Figure 2: Rainfall percentiles since January 2017 (compared to 1900–2019 long-term average) (Jan 2017 to May 2021)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia

# How much water is in the storages?

Storage volume: Split Rock, Keepit and Chaffey storages as at 13 June 2021

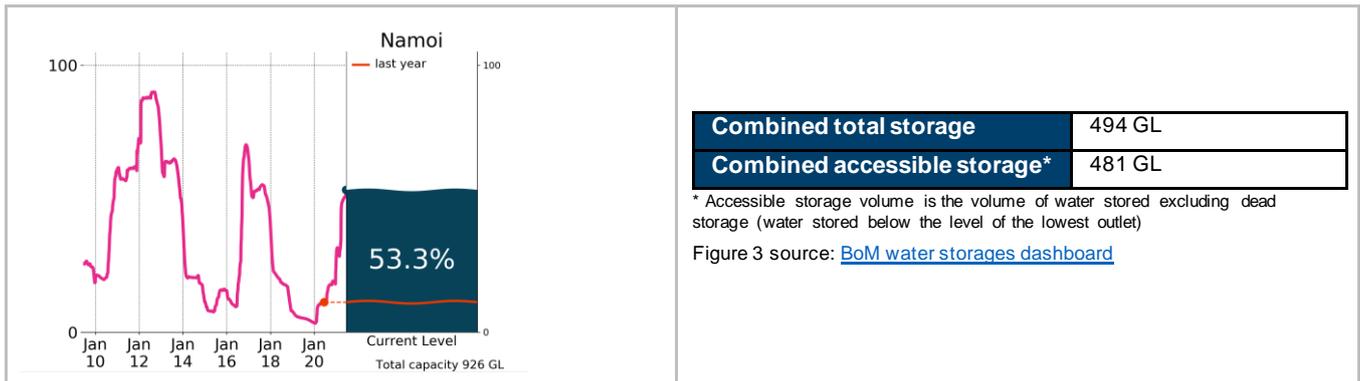

Figure 3: Current total storage (% of total capacity) compared to the last ten years

## Who is the water for?

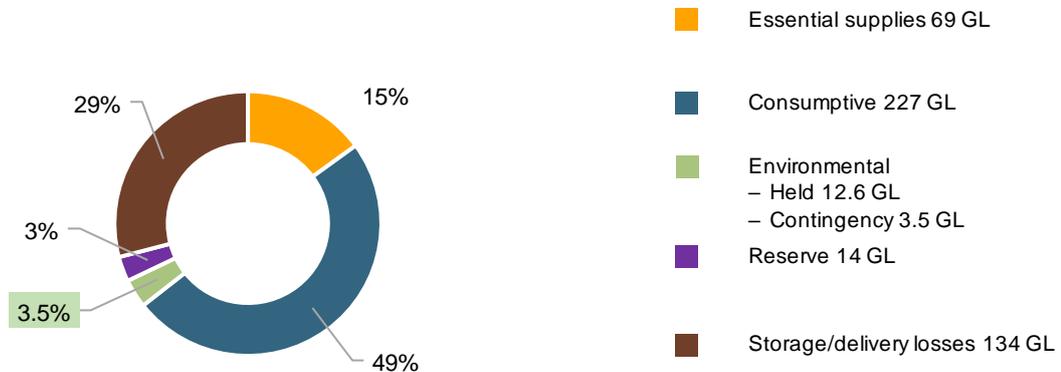

Figure 4: Volumes of water allocated (% of total) for the 2020–21 water year (last updated 7 June 2021)

NB: Allocation information shown here is water allocated for various purposes in the Upper Namoi and Lower Namoi regulated river water sources as at 7 June 2021, and the Peel regulated river water source as at 9 June 2021. It does not represent remaining available allocated water as it does not allow for water used, traded or new storage inflows (in excess of minimum assumptions).

Table 1: Allocation announcements (%) and market prices – selected licence categories as at 15 June 2021

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement prices (monthly median)	Allocation price (median – last 7 days)
Stock & Domestic, Local Utility	100% (Upper & Lower Namoi) 100% (Peel)	Typically 100%	n/a	n/a (Lower Namoi) \$160/ML* (Upper Namoi)
High Security	100% (Upper & Lower Namoi) 100% (Peel)	Typically 100%	n/a	
General Security	100% (Upper Namoi) 90.5% (Lower Namoi) 84% (Peel)	For Lower Namoi, the highest allocation for this time of year since 2016-17.	\$1 300/ML*	
Average Carryover or Starting balance on 1 July (General Security)	40% (Upper Namoi) 6% (Lower Namoi) n/a (Peel)	23% last year (Upper Namoi) 5% last year (Lower Namoi) n/a (Peel)	n/a	

\*Indicative - limited trade data
