

# Water Reporting Summary – South Australian Murray

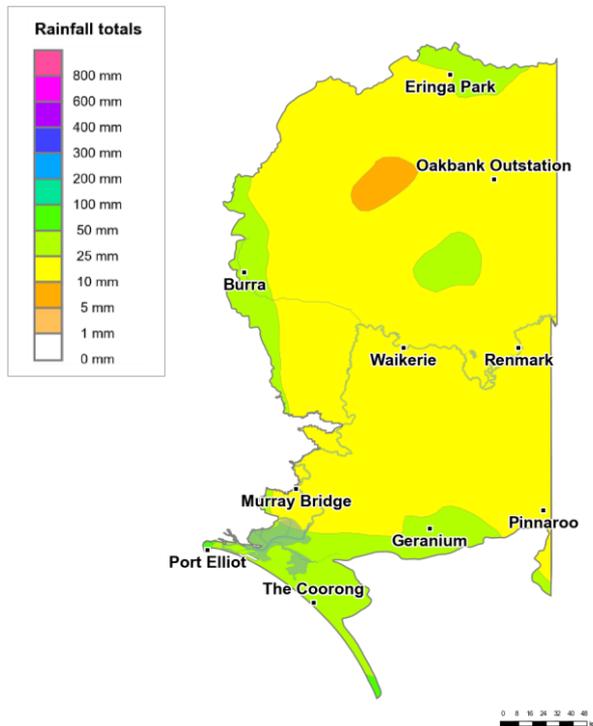

15 June 2021

## Overview

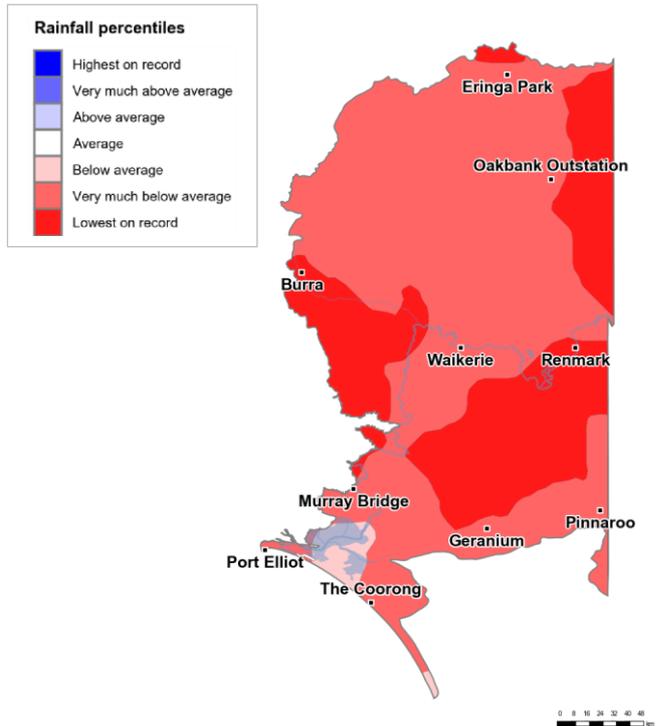

- In the last 30 days, most of the South Australian catchment received 10 to 25 mm of rainfall, while areas along the coast, and near Eringa Park and Burra received up to 50 mm of rainfall. The exception was the area west of Oakbank Outstation which received less than 10 mm of rainfall (Figure 1). The catchment area-average rainfall was 20 mm for the last month. Rainfall in the last month is in the context of the extended dry period from January 2017 with rainfall across most of the South Australian Murray catchment being very much below average or lowest on record (Figure 2).
- In the last month, root zone soil moisture was below average for the South Australian Murray catchment.
- Water allocations to the majority of entitlement holders reached 100% on 17 August 2020. An update provided on 17 May 2021 confirmed 100% allocation for all entitlement holders (Figure 4). The opening allocation for South Australian irrigators for the 2021-22 water year was announced as 100 % on 15 June 2021 (SA DEW). In six out of the last ten years, 100% allocation was announced at the beginning of the water year (1 July).
- Allocation prices are currently \$100 per ML, which is slightly higher than prices paid last month (\$90 per ML) but well below prices paid at the same time last year (\$200 per ML) (Table 1).

Figure 2: Rainfall percentiles since January 2017 (compared to 1900–2019 long-term average) (Jan 2017 to May 2021)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia.

## How much water is there for the South Australian Murray?

The current projected minimum volume of water available to South Australia by the end of 2020–21: 1 850 GL\*

\*Based on the MDBA's current assessment of water resource availability. It provides for an allocation of 830 GL for consumptive entitlements and an allowance for dilution and losses, and excludes water held under South Australia's Storage Right (385.8 GL as at 1 June 2021). The storage right has been set aside under Schedule G of the Murray–Darling Basin Agreement to meet future critical human water needs and private carryover.

NB: Information shown is water allocated for various purposes in 2020–21 and is not adjusted for water used or traded.

Table 1: Allocation announcements (%) and market prices – selected licence categories as at 15 June 2021

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement prices (monthly median)	Allocation price (median – last 7 days)
SA Murray Class 1 (stock and domestic)	100%	Same as most years	n/a	\$100/ML
SA Murray Class 3 (High Security)	100%	In six out of the last ten years, 100% allocation was announced on 1 July.	n/a
