

# Water Reporting Summary - Murrumbidgee Catchment

15 September 2020

## Overview

- In the last 30 days, areas of the Murrumbidgee catchment around Blowering and Burrinjuck Dams received 50 to 100 mm of rainfall. In contrast, other areas of the catchment received less than 25 mm of rainfall, with some downstream areas, near Hay and Balranald, and upstream areas, near Cooma, receiving less than 10 mm (Figure 1). The total area-average rainfall for the catchment was 27 mm. This recent rainfall is in the context of the extended dry period since January 2017 with rainfall across the Murrumbidgee catchment mostly below average or very much below average (Figure 2).
- Root zone soil moisture was above to very much above average in areas near Burrinjuck Dam, Canberra and Cooma, and average to below average elsewhere in the Murrumbidgee catchment. As a result of wet soils in the storage catchments, the recent rainfall has translated into runoff and inflows into storages (Figure 3).
- Allocations for general security entitlement holders are currently 46% (which for this time of year is the highest since 2016-17 (Figure 4 and Table 1).
- Allocation prices have decreased since the start of the 2020-21 water year (currently \$150 per ML compared to \$280 per ML in July) and are well below their peak of \$750 per ML in January 2020.

## Recent conditions

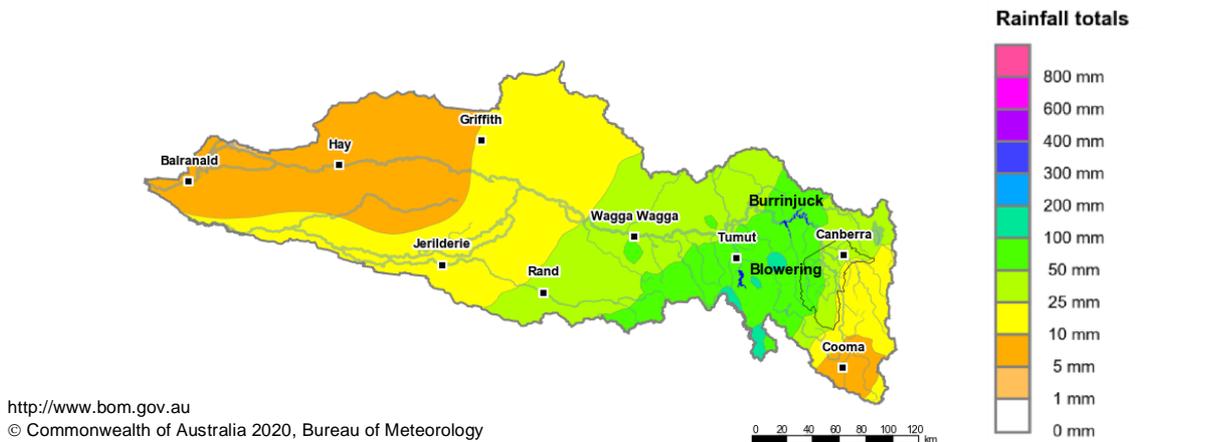

Figure 1: Rainfall totals for the last 30 days (17 Aug to 15 Sept 2020)

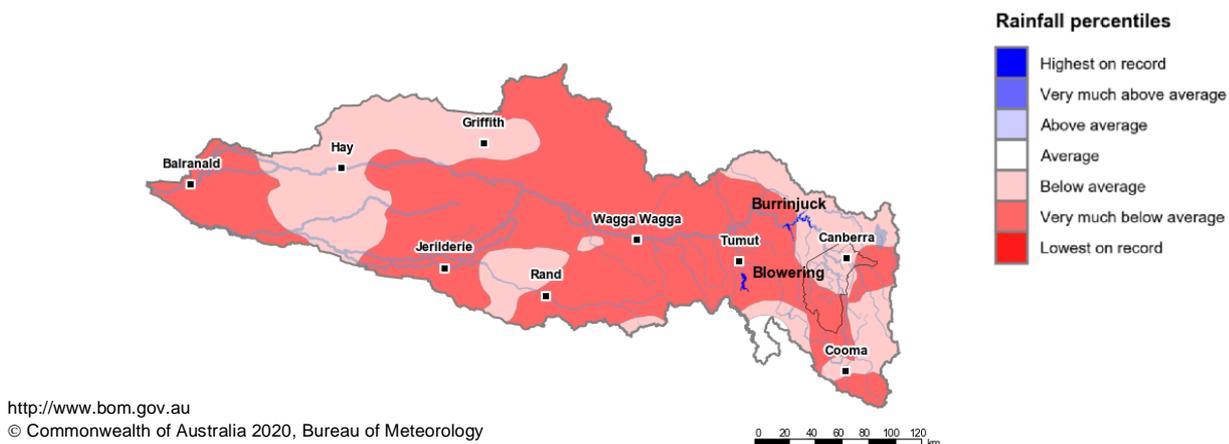

Figure 2: Rainfall percentiles since January 2017 (Compared to 1900-2019 long-term average) (January 2017 to Aug 2020)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia.

# How much water is in the storages?

**Storage volume:** Burrinjuck, Blowering storages as at 15 September 2020

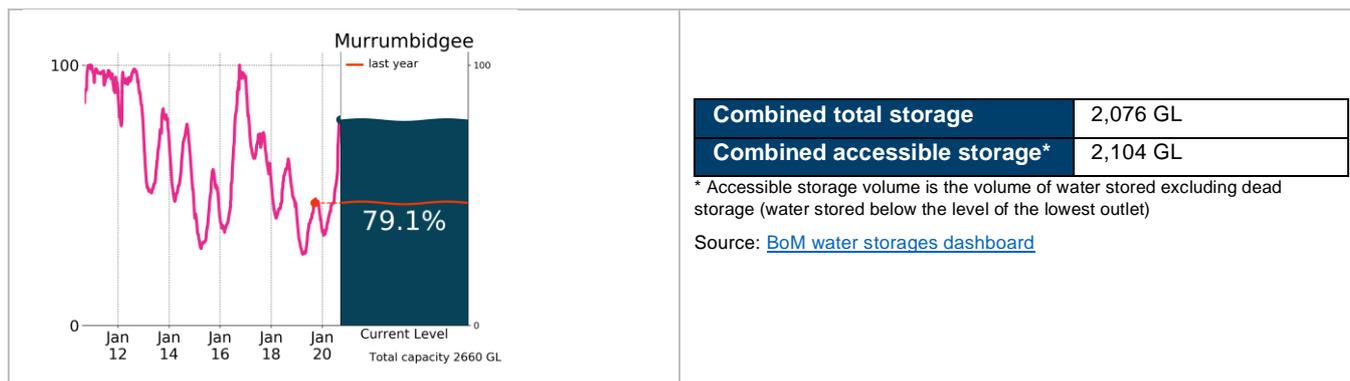

Figure 3: Current total storage (% of total capacity) compared to the last ten years.

## Who is the water for?

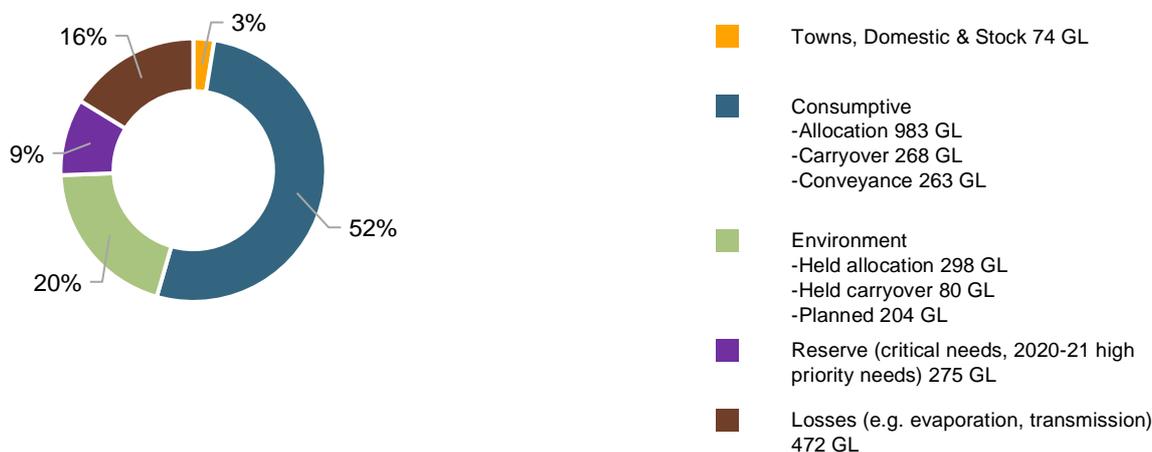

Figure 4: Volumes of water allocated (% of total) for the 2020-21 water year (as at 15 September 2020)

NB: Allocation information shown here is water allocated for various purposes as at 15 September 2020. It does not represent remaining available allocated water as it does not allow for water used, traded or new storage inflows (in excess of minimum assumptions).

Table 1: Allocation announcements (%) and market prices – Selected licence categories as at 15 September 2020

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement Prices (monthly median)	Allocation Price (median - last 7 days)
Stock & Domestic	100%	Same as most years	n/a	\$150/ML*
High Security	95%	Same as most years	n/a	
General Security	46%	Highest allocation for this time of year since 2016-17	n/a	
Average Carryover (General Security)	18%	10% higher than the previous year	n/a	

\*Indicative - limited trades
