

Water Reporting Summary – South Australian Murray

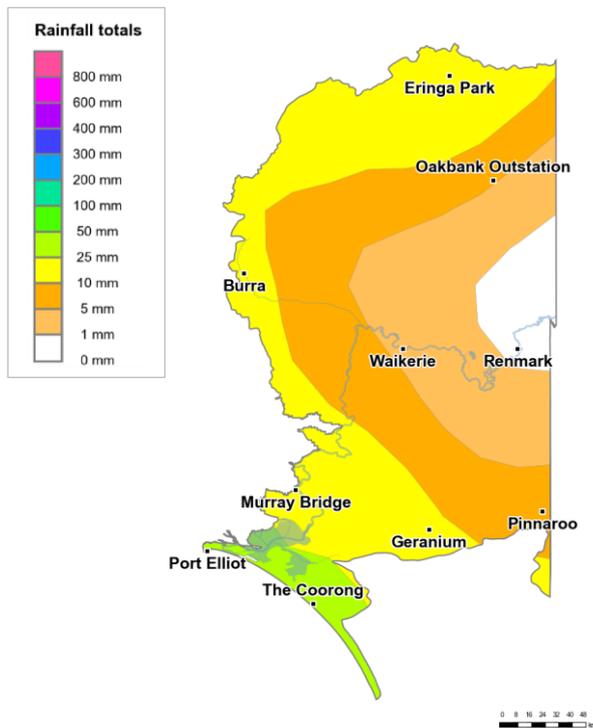

17 May 2021

Overview

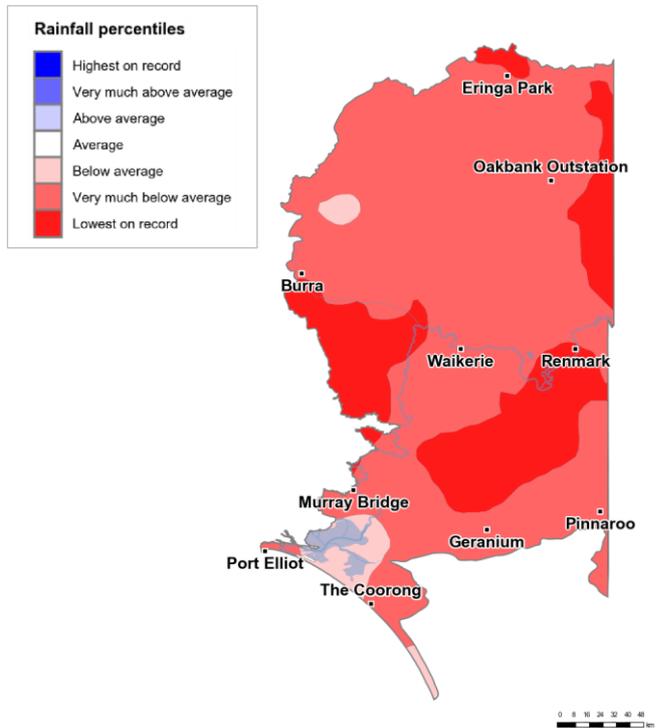

- In the last 30 days, total rainfall had a decreasing gradient from west to east in the South Australian Murray catchment. The western part of the South Australian Murray catchment received 10 to 25 mm of rainfall, while areas along the coast received up to 50 mm. Moving east, rainfall decreased with areas around Renmark receiving no rainfall (Figure 1). The catchment area-average rainfall was 9 mm for the last month. Rainfall in the last month is in the context of the extended dry period from January 2017 with rainfall across most of the South Australian Murray catchment being below or very much below average (Figure 2).
- Water allocations to the majority of entitlement holders reached 100% on 17 August 2020. An update provided on 2 November 2020 confirmed 100% allocation for all entitlement holders (Figure 4). In six out of the last ten years, 100% allocation was announced at the beginning of the water year (1 July).
- Allocation prices are currently \$100 per ML, which is higher than prices paid last month (\$75 per ML) but well below prices paid at the same time last year (\$300 per ML) (Table 1).

Figure 2: Rainfall percentiles since January 2017 (compared to 1900–2019 long-term average) (Jan 2017 to April 2021)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia.

How much water is there for the South Australian Murray?

The current projected minimum volume of water available to South Australia by the end of 2020–21: 1 850 GL*

*Based on the MDBA's current assessment of water resource availability. It provides for an allocation of 830 GL for consumptive entitlements and an allowance for dilution and losses, and excludes water held under South Australia's Storage Right (336.9 GL as at 1 April 2021). The storage right has been set aside under Schedule G of the Murray–Darling Basin Agreement to meet future critical human water needs and private carryover.

NB: Information shown is water allocated for various purposes in 2020–21 and is not adjusted for water used or traded.

Table 1: Allocation announcements (%) and market prices – selected licence categories as at 17 May 2021

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement prices (monthly median)	Allocation price (median – last 7 days)
SA Murray Class 1 (stock and domestic)	100%	Same as most years	n/a	\$100/ML
SA Murray Class 3 (High Security)	100%	In six out of the last ten years, 100% allocation was announced on 1 July.	\$10 000/ML
