

Water Reporting Summary – Namoi Catchment

1 April 2021

Overview

- In the last month, there has been widespread rainfall across the Namoi catchment with most areas receiving 100 to 200 mm of rainfall. The exceptions were areas around Chaffey Dam which received 200 to 300 mm of rainfall (Figure 1). The total area-average rainfall across the catchment was 163.5 mm for the last 30 days. This recent rainfall is in the context of the extended dry period since January 2017 with rainfall across the Namoi catchment very much below average except for the central part having below average rainfall (Figure 2).
- In the last month, the root zone soil moisture across most of the north east areas of the Namoi catchment was very much above average with the rest of the catchment having above average soil moisture. The recent rainfall has had a positive influence on runoff and inflows into storages (Figure 3) which has improved the water availability (Figure 4).
- Announced allocations for general security entitlement holders in the Upper Namoi and Lower Namoi are currently 100% and 39.3% respectively. Allocations for general security entitlement holders in the Peel are currently 24% (Table 1).
- There has been some water trading activity with allocation prices of \$155 per ML (Table 1).

Recent conditions

Figure 1: Rainfall totals for the last 30 days (3 March to 1 April 2021)

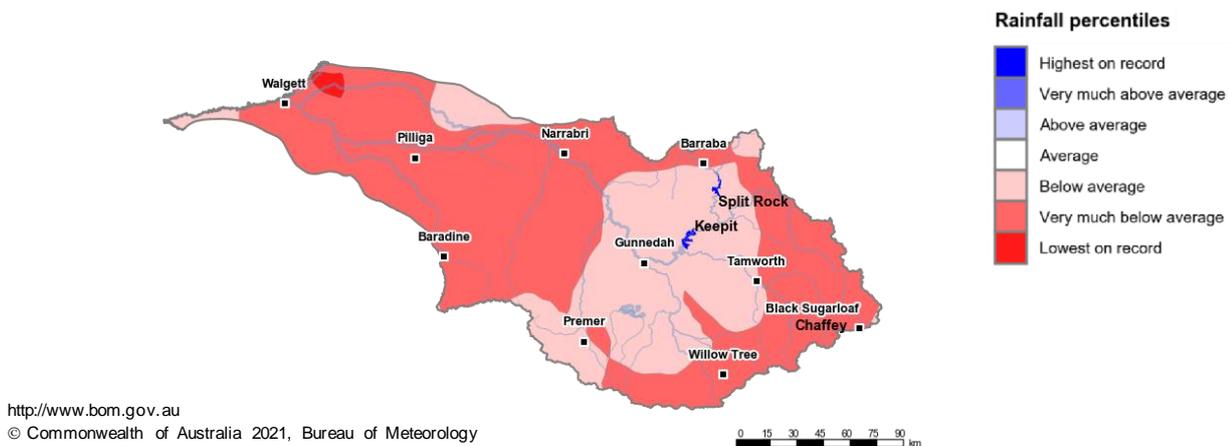

Figure 2: Rainfall percentiles since January 2017 (compared to 1900–2019 long-term average) (Jan 2017 to Mar 2021)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia

How much water is in the storages?

Storage volume: Split Rock, Keepit and Chaffey storages as at 31 March 2021

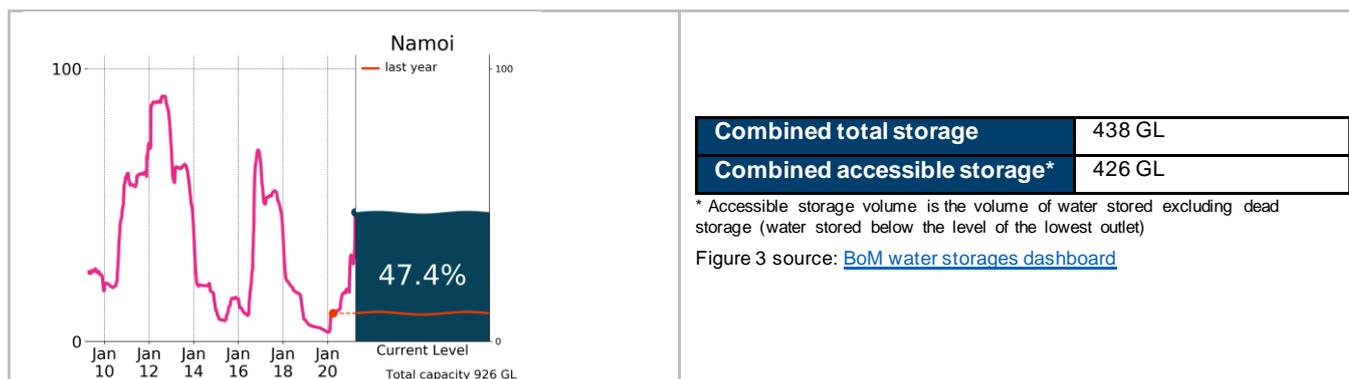

Figure 3: Current total storage (% of total capacity) compared to the last ten years

Who is the water for?

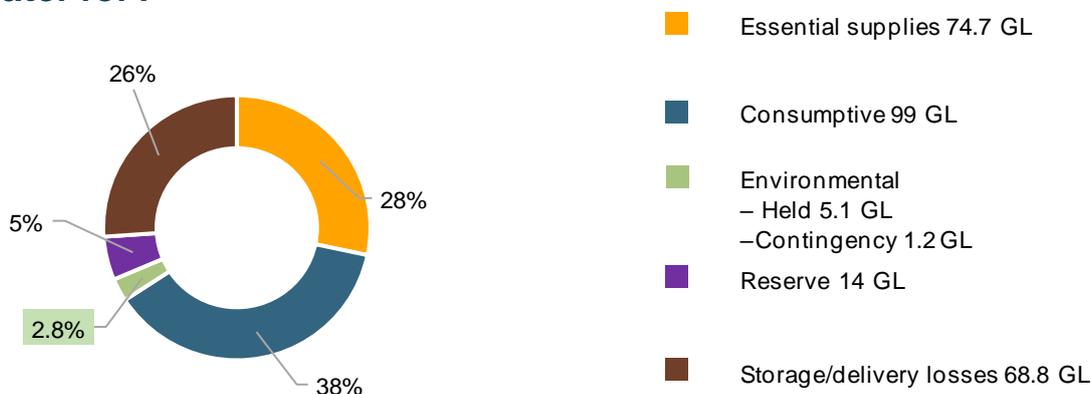

Figure 4: Volumes of water allocated (% of total) for the 2020–21 water year (last updated 5 March 2021)

Source: [NSW Department of Planning, Industry and Environment](#) and [CEWO](#)

NB: Allocation information shown here is water allocated for various purposes in the Upper Namoi and Lower Namoi regulated river water sources as at 5 March 2021, and the Peel regulated river water source as at 9 March 2021. It does not represent remaining available allocated water as it does not allow for water used, traded or new storage inflows (in excess of minimum assumptions).

Table 1: Allocation announcements (%) and market prices – selected licence categories as at 1 April 2021

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement prices (monthly median)	Allocation price (median – last 7 days)
Stock & Domestic, Local Utility	100% (Upper & Lower Namoi) 100% (Peel)	Typically 100%	n/a	n/a (Lower Namoi) \$155/ML* (Upper Namoi)
High Security	100% (Upper & Lower Namoi) 100% (Peel)	Typically 100%	n/a	
General Security	100% (Upper Namoi) 39.3% (Lower Namoi) 24% (Peel)	For Lower Namoi, the highest allocation for this time of year since 2016-17. For the Peel, first allocation since 2018-19.	\$1 350/ML*	
Average Carryover or Starting balance on 1 July (General Security)	40% (Upper Namoi) 6% (Lower Namoi) n/a (Peel)	23% last year (Upper Namoi) 5% last year (Lower Namoi) n/a (Peel)	n/a	

*Indicative - limited trade data
