

Water Reporting Summary – Namoi Catchment

1 December 2020

Overview

- In the last month, most of the central and lower Namoi catchment received less than 10 mm of rainfall. Areas near Premer, Chaffey Dam and east of Split Rock Dam received 10 to 25 mm, while areas near Willow Tree received 25 to 50 mm of rainfall (Figure 1). The total area-average rainfall across the catchment was 8 mm for the last 30 days. This recent rainfall is in the context of the extended dry period since January 2017 with rainfall across the Namoi catchment being very much below average or lowest on record (Figure 2).
- The recent rainfall has maintained root zone soil moisture at average to above average levels across most of the Namoi catchment. However, the recent rainfall has not translated into significant runoff and inflows into storages (Figure 3) with Drought Stage 2 conditions continuing for the Namoi catchment. Drought Stage 2 (emerging drought or drought recovery) reflects limited water resources and multiple years of low flows. As a result, there are zero or low allocations for some entitlement holders and water trade is limited (Figures 3 and 4).
- Allocations announced on 6 November for general security entitlement holders in the Upper Namoi and Lower Namoi were 50% and 7% respectively. Allocations for general security entitlement holders in the Peel remain at 0%. Limited water availability has resulted in limited water trading activity for the Namoi catchment (Table 1).

Recent conditions

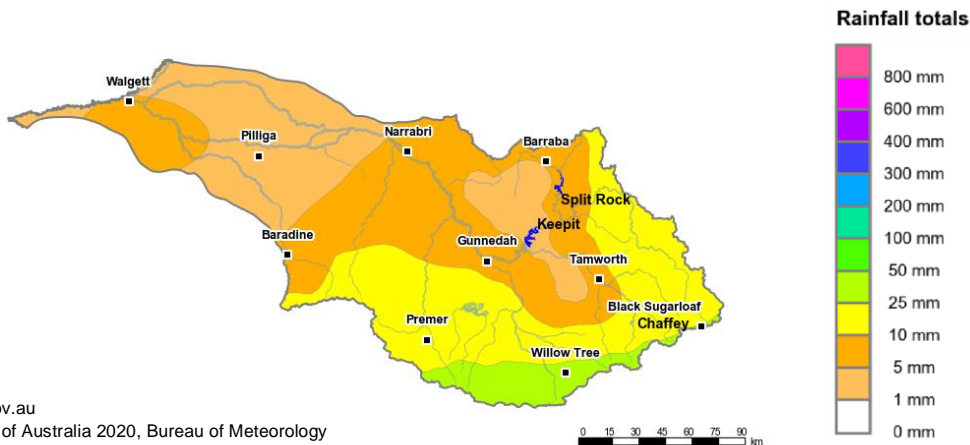

Figure 1: Rainfall totals for the last 30 days (2 Nov to 1 Dec 2020)

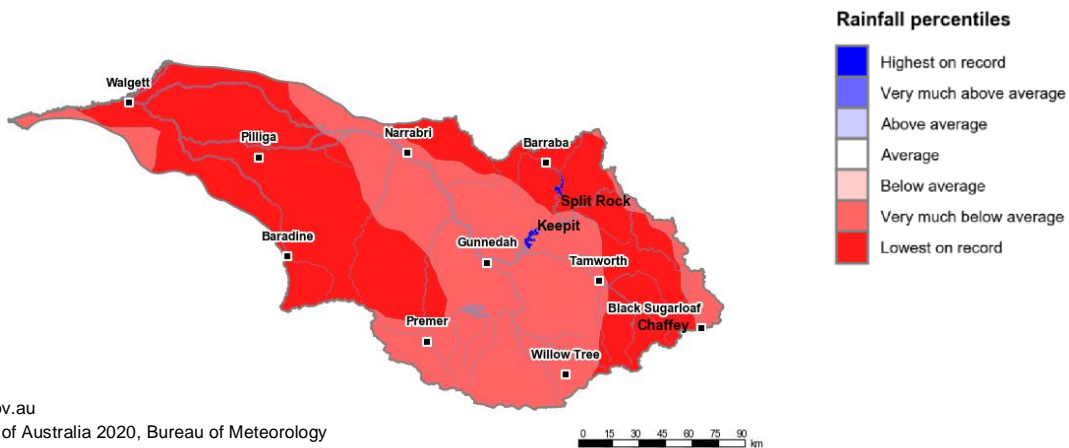

Figure 2: Rainfall percentiles since January 2017 (compared to 1900–2019 long-term average) (Jan 2017 to Nov 2020)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia

How much water is in the storages?

Storage volume: Split Rock, Keepit and Chaffey storages as at 1 December 2020

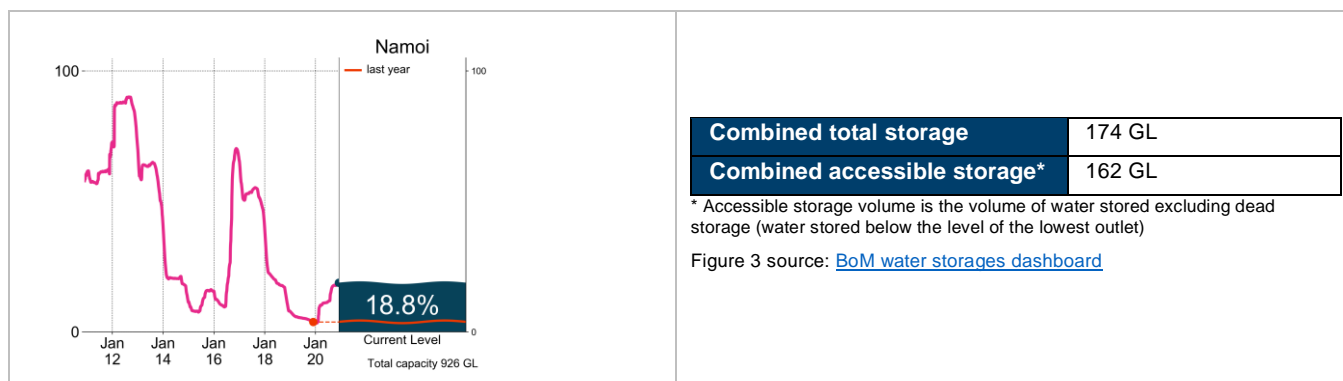

Figure 3: Current total storage (% of total capacity) compared to the last ten years

Who is the water for?

Figure 4: Volumes of water allocated (% of total) for the 2020–21 water year (last updated 31 October and 2 November 2020)

Source: [NSW Department of Planning, Industry and Environment](#) and [CEWO*](#)

NB: Allocation information shown here is water allocated for various purposes in the Upper Namoi and Lower Namoi regulated river water sources as at 31 October 2020, and the Peel regulated river water source as at 2 November 2020. It does not represent remaining available allocated water as it does not allow for water used, traded or new storage inflows (in excess of minimum assumptions).

Table 1: Allocation announcements (%) and market prices – selected licence categories as at 1 December 2020

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement prices (monthly median)	Allocation price (median – last 7 days)
Stock & Domestic, Local Utility	100% (Upper & Lower Namoi) 80% (Peel)	Typically 100%	n/a	n/a
High Security	100% (Upper & Lower Namoi) 50% (Peel)	Typically 100%	n/a	
General Security	50% (Upper Namoi) 7% (Lower Namoi) 0% (Peel)	7% is the highest allocation for this time of year since 2017. 0% has occurred three times for the Peel for this time of year in the last ten years.	n/a	
Average Carryover or Starting balance on 1 July (General Security)	40% (Upper Namoi) 6% (Lower Namoi) n/a (Peel)	23% last year (Upper Namoi) 5% last year (Lower Namoi) n/a (Peel)	n/a	

*Indicative - limited trade data
