

Water Reporting Summary - NSW Border Rivers Catchment

1 September 2020

Overview

- In the last 30 days, most of the NSW Border Rivers catchment received 25 to 50 mm of rainfall with some upstream areas near Glen Innes and Tenterfield receiving up to 100 mm (Figure 1). As a result, the total area-average rainfall across the catchment was 39 mm over the last 30 days. This recent widespread rainfall is in the context of the extended dry period since January 2017 with rainfall across the NSW Border Rivers catchment mainly being very much below average or lowest on record (Figure 2).
- The recent rainfall has helped to improve average root zone soil moisture conditions which are average to above average across the catchment but this has not translated into significant runoff and inflows into storages (Figure 3). However, Drought Stage 3 conditions have eased to Drought Stage 2 conditions for the NSW Border Rivers catchment. In Drought Stage 2, there has been limited water resources and multiple years of low flows (NSW DPIE). However, there remain low or no allocations for some entitlement holders and water trading has been limited (Figure 4 and Table 1).
- Announced allocations for general security A and B class entitlements are currently at 14.2% and 0%, respectively. For class A entitlements, for this time of year, only last year's allocation was lower over the period since 2009–10.

Recent conditions

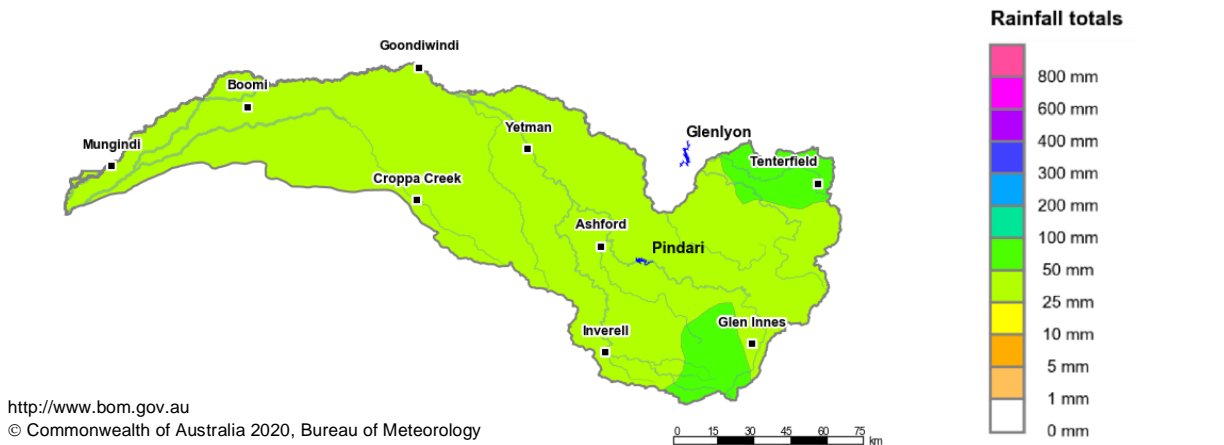

Figure 1: Rainfall totals for the last 30 days (3 Aug to 1 Sept 2020)

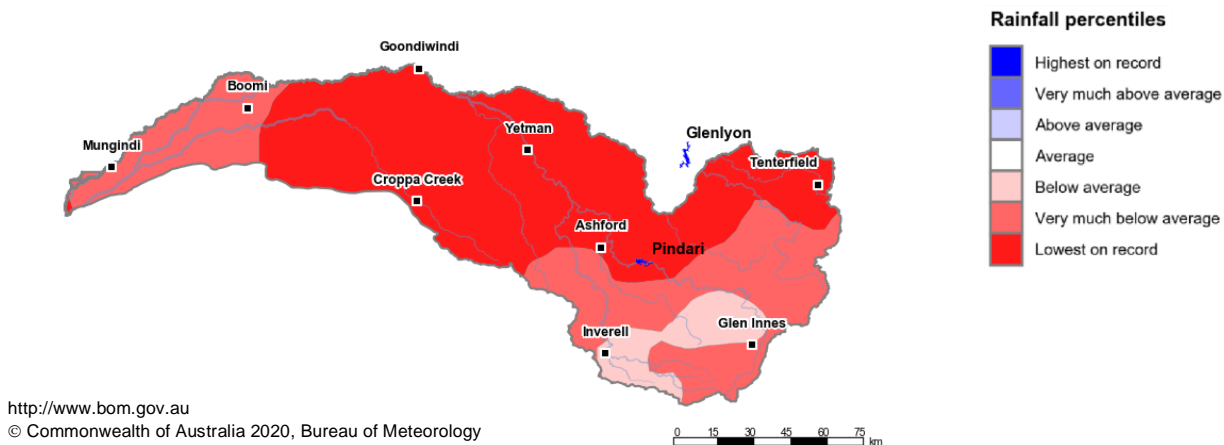

Figure 2: Rainfall percentiles since January 2017 (Compared to 1900-2019 long-term average) (Jan 2017 to Aug 2020)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia.

How much water is in the storages?

Combined total storage (NSW share*): 75.3GL (as at 1 September 2020)

*Pindari storage and New South Wales' 57% share of Glenlyon storage

Figure 3: Current total storage (% of total capacity) compared to the last ten years

Who is the water for?

Figure 4: Volumes of water allocated (% of total) for the 2020-21 water year (as at 21 August 2020)

Source: [NSW Department of Planning, Industry and Environment](#) and [CEWO](#)

NB: Allocation information shown here is water allocated for various purposes as at 21 August 2020. It does not represent remaining available allocated water as it does not allow for water used, traded or new storage inflows (in excess of minimum assumptions).

Table 1: Allocation announcements (%) and market prices – Selected licence categories as at 1 September 2020

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement Prices (monthly median)	Allocation Price (median - last 7 days)
Stock & Domestic, Local Utility	100%	Same as most years	n/a	\$400/ML*
NSW Border Rivers High Security	100%	Same as most years	n/a	
NSW Border Rivers General Security - A	14.2%	Second lowest on record (since 2009-10)	n/a	
NSW Border Rivers General Security - B	0%	0% has occurred in six out of the last ten years	n/a	
Average Carryover (General Security)	1% General Security – A 2% General Security – B	1% last year 2% last year	n/a	

*Indicative - limited trade data
