

# Water Reporting Summary - Murrumbidgee Catchment

1 September 2020

## Overview

- In the last 30 days, downstream areas of the Murrumbidgee catchment received 25 to 50 mm of rainfall, while the central areas near Wagga Wagga and Rand received 50 to 100 mm. Most upstream areas received 100 to 200 mm of rainfall, with areas around Blowering Dam receiving up to 300 mm (Figure 1). The total area-average rainfall for the catchment was 77 mm. This recent rainfall is in the context of the extended dry period since January 2017 with rainfall across the Murrumbidgee catchment mainly below average or very much below average (Figure 2).
- Root zone soil moisture was above to very much above average in areas near Burrinjuck Dam, Canberra and Cooma, and mostly average elsewhere in the Murrumbidgee catchment during August. As a result of wet soils in the storage catchments, recent rainfall has translated into runoff and inflows into storages (Figure 3).
- Allocations for general security entitlement holders are currently 44% (an increase of 12% since 17 August), which for this time of year is the highest since 2016-17 (Figure 4 and Table 1).
- Allocation prices have decreased since the start of the 2020-21 water year (currently \$170 per ML compared to \$280 per ML in July) and are well below their peak of \$750 per ML in January 2020.

## Recent conditions

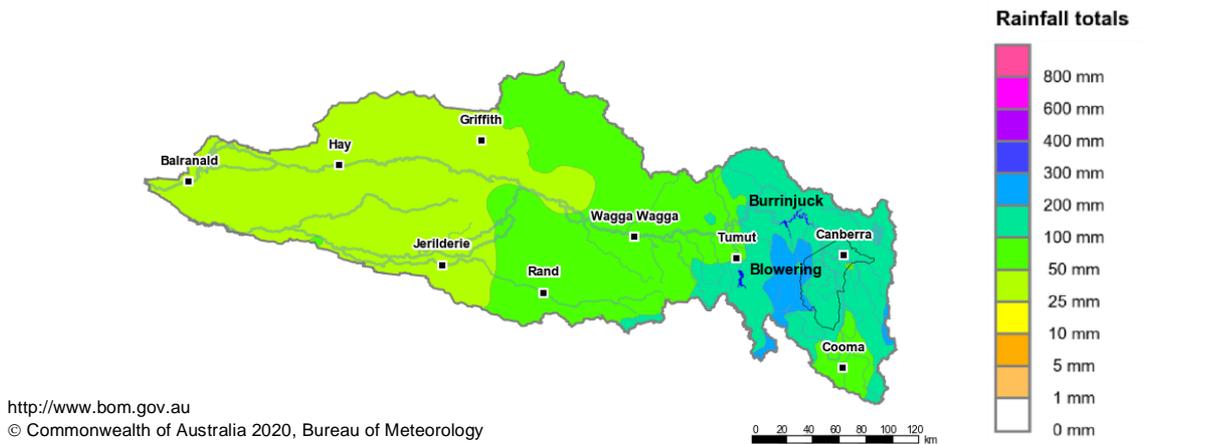

Figure 1: Rainfall totals for the last 30 days (3 Aug to 1 Sept 2020)

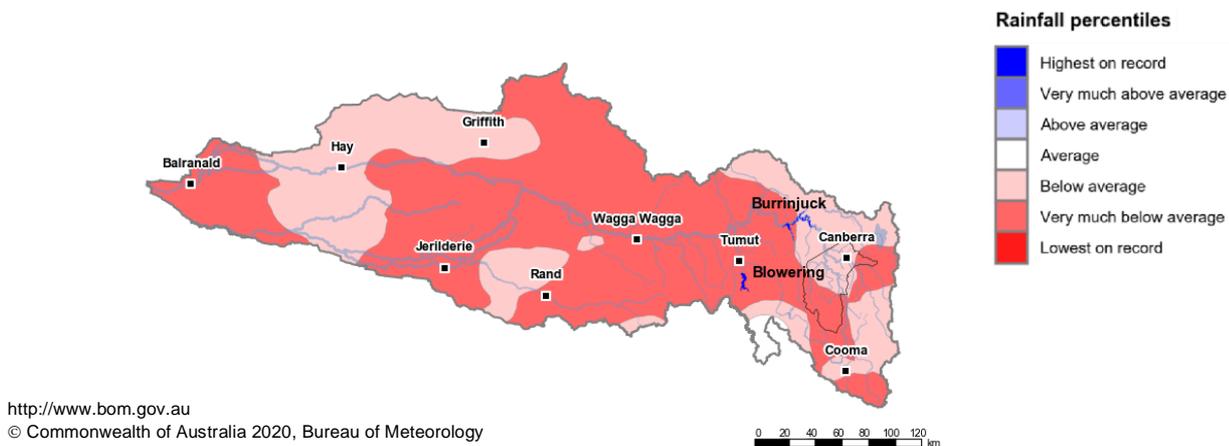

Figure 2: Rainfall percentiles since January 2017 (Compared to 1900-2019 long-term average) (January 2017 to Aug 2020)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia.

# How much water is in the storages?

Storage volume: Burrinjuck, Blowering storages as at 1 September 2020

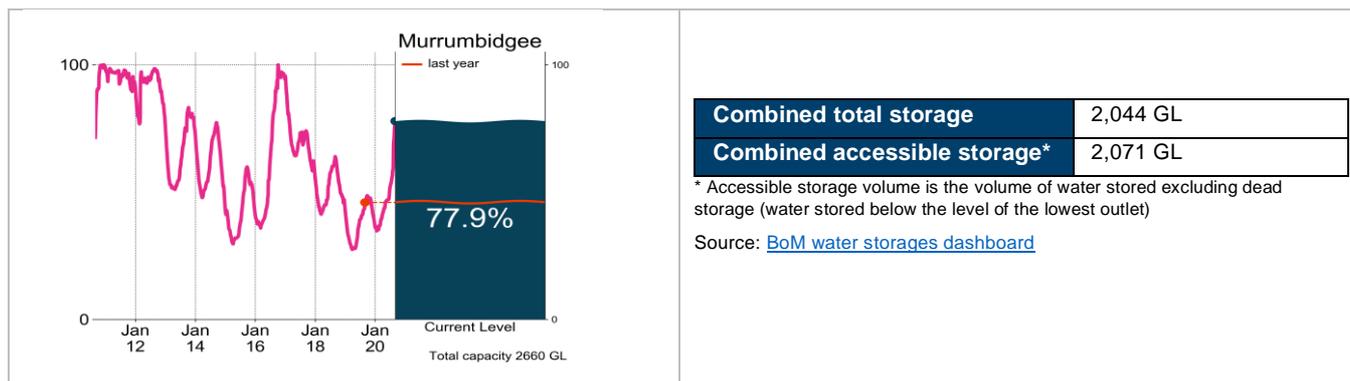

Figure 3: Current total storage (% of total capacity) compared to the last ten years.

## Who is the water for?

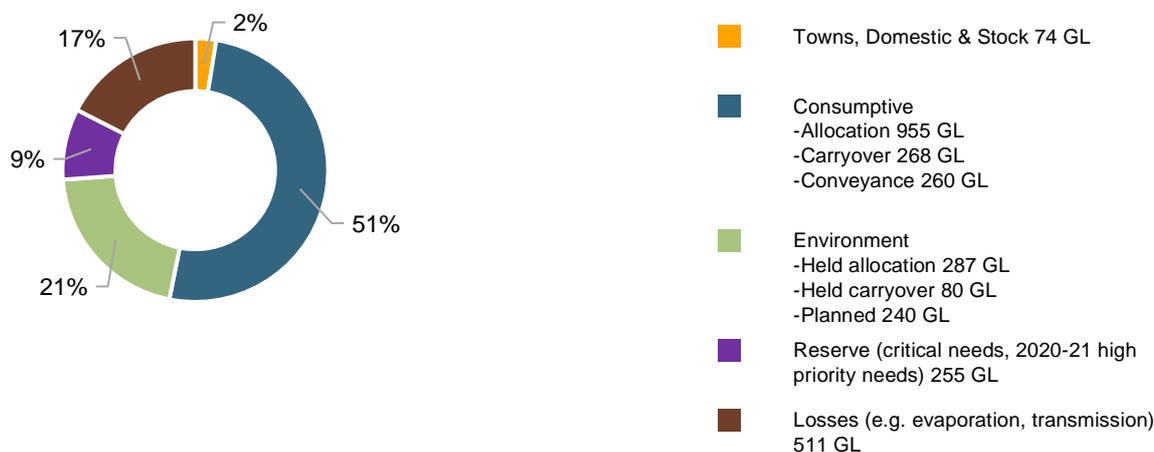

Figure 4: Volumes of water allocated (% of total) for the 2020-21 water year (as at 1 September 2020)

NB: Allocation information shown here is water allocated for various purposes as at 1 September 2020. It does not represent remaining available allocated water as it does not allow for water used, traded or new storage inflows (in excess of minimum assumptions).

Table 1: Allocation announcements (%) and market prices – Selected licence categories as at 1 September 2020

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement Prices (monthly median)	Allocation Price (median - last 7 days)
Stock & Domestic	100%	Same as most years	n/a	\$170/ML*
High Security	95%	Same as most years	n/a	
General Security	44%	Highest allocation for this time of year since 2016-17	\$ 1,850/ML*	
Average Carryover (General Security)	18%	10% higher than the previous year	n/a	

\*Indicative - limited trades
