

Water Reporting Summary – South Australian Murray

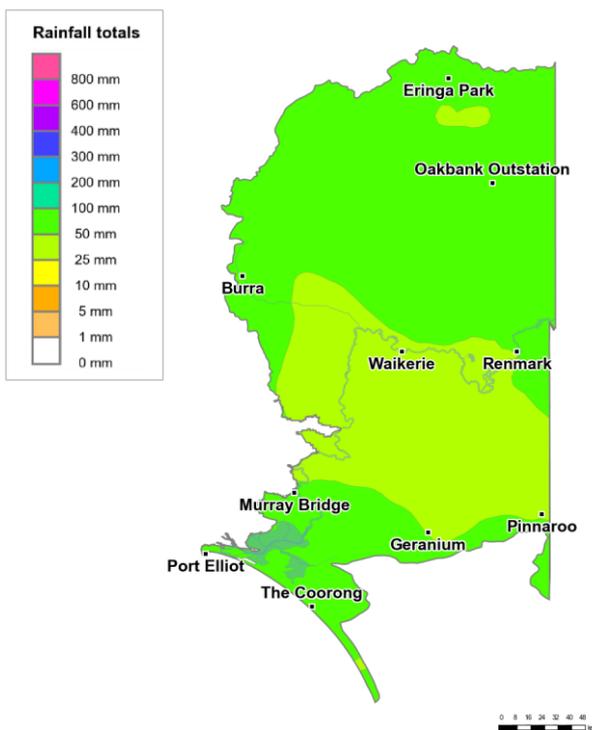

2 November 2020

Overview

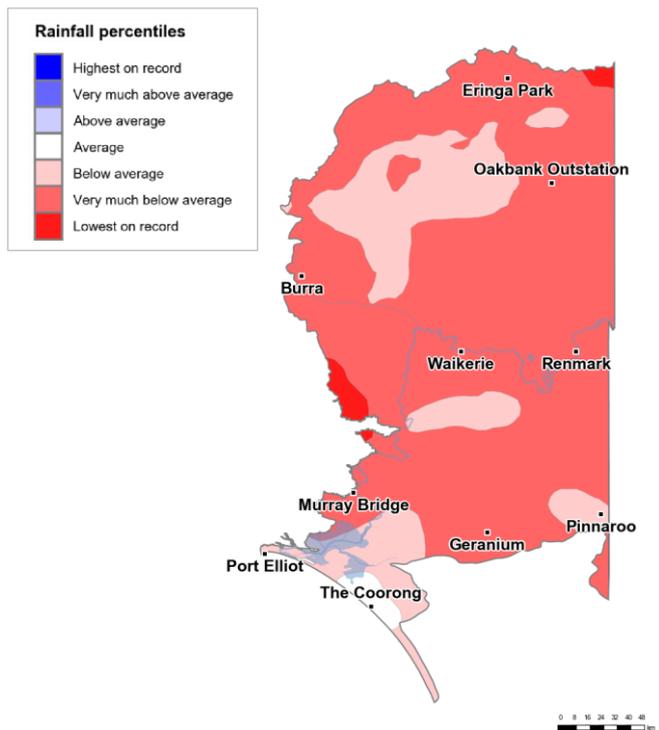

- In the last 30 days, the South Australian Murray catchment received widespread rainfall, with most of the northern and southern areas of the catchment receiving 50 to 100 mm. The central areas of the catchment near Waikerie received 25 to 50 mm of rainfall (Figure 1). The catchment area-average rainfall was 55 mm for the last month. Rainfall in the last month is in the context of the extended dry period from January 2017 with rainfall across most of the South Australian Murray catchment being below or very much below average (Figure 2).
- Water allocations to the majority of entitlement holders reached 100% on 17 August 2020. An update provided on 2 November 2020 confirmed 100% allocation for all entitlement holders (Figure 4). In six out of the last ten years, 100% allocation was announced at the beginning of the water year (1 July).
- Allocation prices are currently \$250 per ML, which is lower than September and significantly lower than the peak of over \$950 per ML in November 2019 (Table 1).

Figure 2: Rainfall percentiles since January 2017 (compared to 1900–2019 long-term average) (Jan 2017 to Oct 2020)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia.

How much water is there for the South Australian Murray?

The current projected minimum volume of water available to South Australia by the end of 2020–21: 1 850 GL*

*Based on the MDBA's current assessment of water resource availability. It provides for an allocation of 830 GL for consumptive entitlements and an allowance for dilution and losses, and excludes water held under South Australia's Storage Right (339.3 GL as at end Sept 2020). The storage right has been set aside under Schedule G of the Murray–Darling Basin Agreement to meet future critical human water needs and private carryover.

NB: Information shown is water allocated for various purposes in 2020–21 and is not adjusted for water used or traded.

Table 1: Allocation announcements (%) and market prices – selected licence categories as at 2 November 2020

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement prices (monthly median)	Allocation price (median – last 7 days)
SA Murray Class 1 (stock and domestic)	100%	Same as most years	n/a	\$250/ML
SA Murray Class 3 (High Security)	100%	In six out of the last ten years, 100% allocation was announced on 1 July.	\$6 700/ML
