

Water Reporting Summary - NSW Border Rivers Catchment

3 August 2020

Overview

- In the last 30 days, most of the upstream NSW Border Rivers catchment received up to 50 mm of rainfall. In contrast, the central and downstream parts of the catchment received less than 25 mm rain (Figure 1). As a result, the total area-average rainfall across the catchment was 25 mm over the last 30 days. This recent patchy rainfall is in the context of the extended dry period since January 2017 with rainfall across the NSW Border Rivers catchment mainly being very much below average or lowest on record (Figure 2).
- The limited recent rainfall has helped to maintain average root zone soil moisture conditions but has not translated into significant runoff and inflows into storages (Figure 3). Drought Stage 3 conditions continue for the NSW Border Rivers catchment. For Stage 3, there has been severe water shortages, with water delivery prioritised for essential supplies (NSW DPIE). Consequently, there have been low or no allocations for some entitlement holders and water trading has been limited (Figure 4 and Table 1).
- Announced allocations for general security A and B class entitlements are currently at 7.3% and 0%, respectively. For class A entitlements for this time of year, only last year's allocation was lower since 2009–10.

Recent conditions

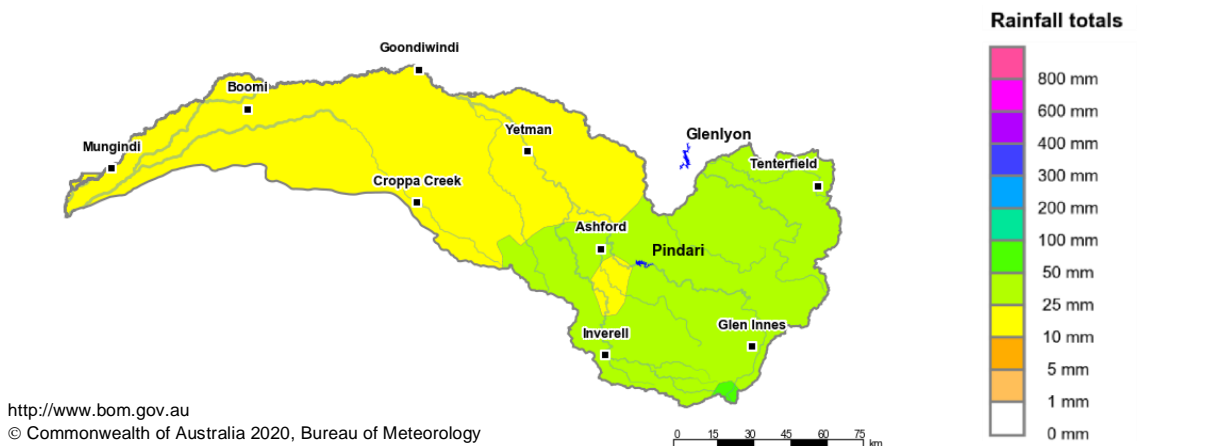

Figure 1: Rainfall totals for the last 30 days (5 July to 3 Aug 2020)

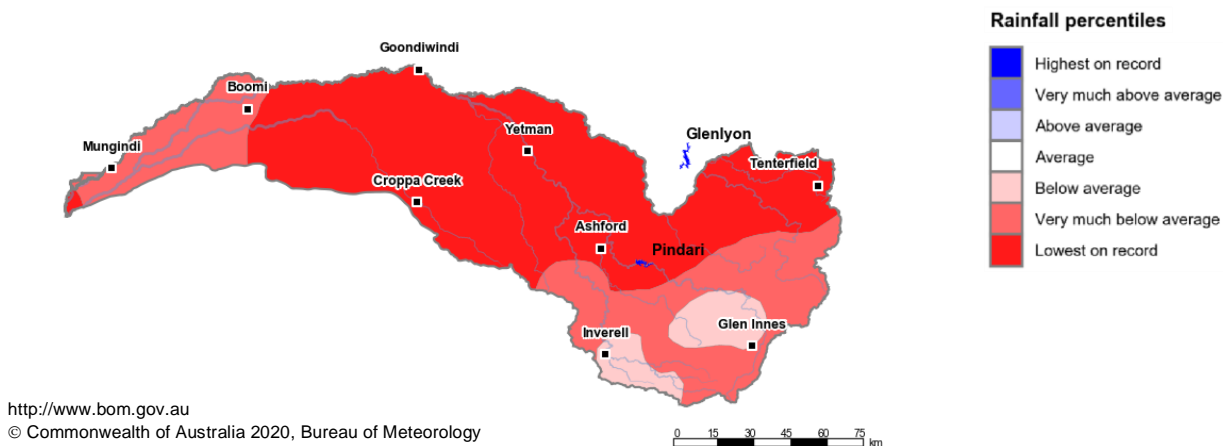

Figure 2: Rainfall percentiles since January 2017 (Compared to 1900-2019 long-term average) (Jan 2017 to July 2020)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia.

How much water is in the storages?

Combined total storage (NSW share*): 62.6 GL (as at 3 August 2020)

*Pindari storage and New South Wales' 57% share of Glenlyon storage

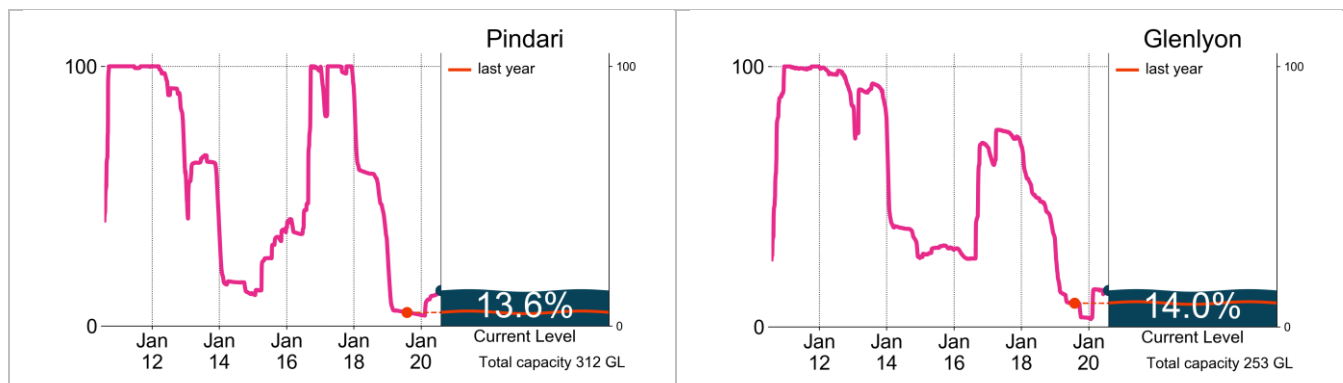

Figure 3: Current total storage (% of total capacity) compared to the last ten years

Who is the water for?

Figure 4: Volumes of licenced water available (updated 29 July 2020)

Source: [NSW DPIE Water usage dashboard](#) and [CEWQ](#)

NB: Allocation information shown here is water available for various licence categories as at 29 July 2020. Due to Drought Stage 3 conditions, the limited available water is being prioritised towards essential supplies. Water allocation figures shown here differ to those on WaterNSW's [Water Insights](#), which shows estimated water available over a two-year planning period (2020 to 2022).

Table 1: Allocation announcements (%) and market prices – Selected licence categories as at 3 August 2020

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement Prices (monthly median)	Allocation Price (median - last 7 days)
Stock & Domestic, Local Utility	100%	Same as most years	n/a	\$412/ML*
NSW Border Rivers High Security	100%	Same as most years	n/a	
NSW Border Rivers General Security - A	7.3%	Second lowest on record (since 2009-10)	n/a	
NSW Border Rivers General Security - B	0%	0% has occurred in six out of the last ten years	n/a	
Average Carryover (General Security)	1% General Security – A 2% General Security – B	1% last year 2% last year	n/a	

*Indicative - limited trade data.
