

Water Reporting Summary - Gwydir Catchment

1 May 2020

Overview

- In the last month, most of the Gwydir catchment received between 50 to 100 mm of rainfall, except downstream of Moree and a small part of the upper catchment which received 25 to 50 mm (Figure 1). The total area-average rainfall across the catchment was 56 mm in the last 30 days. However, this recent rainfall is in the context of the extended dry period since January 2017 with rainfall across the Gwydir catchment being very much below average or lowest on record (Figure 2).
- Recent rainfall has significantly improved soil moisture conditions, with root zone soil moisture in most of the Gwydir catchment being very much above average for April. The recent wetting of the catchment has resulted in some runoff and inflows to Copeton Dam, but Drought Stage 2 conditions continue for the Gwydir catchment (Figure 3). In Drought Stage 2, there has been limited water resources and multiple years of low flows (NSW DPIE).
- As recent improved conditions have not been sufficient to fully offset the long-term dry conditions, announced allocations for general security entitlement holders remain at 0%, with limited water trading activity (Figure 4 and Table 1).

Recent conditions

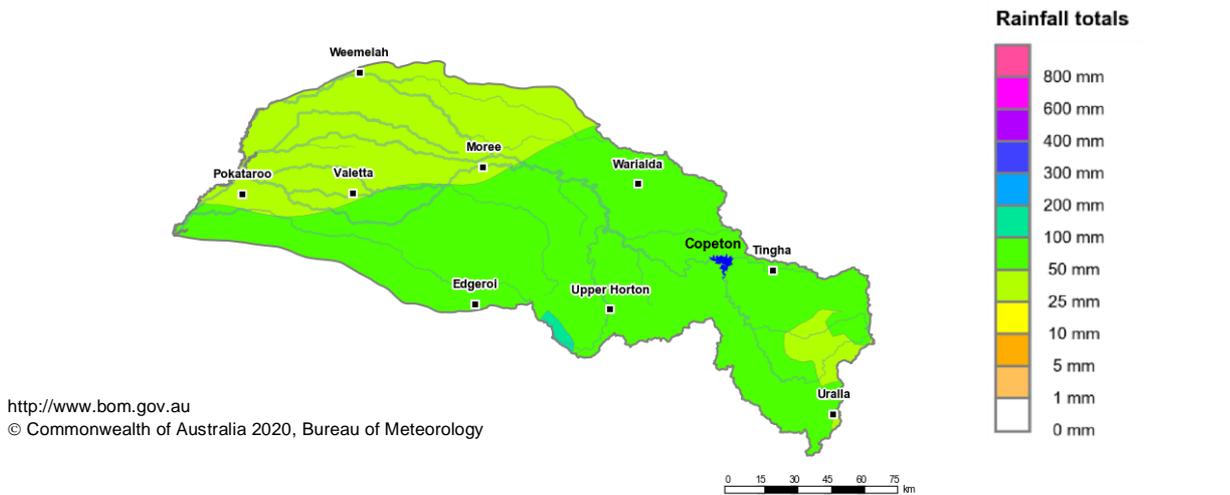

Figure 1: Rainfall totals for the last 30 days (2 April to 1 May 2020)

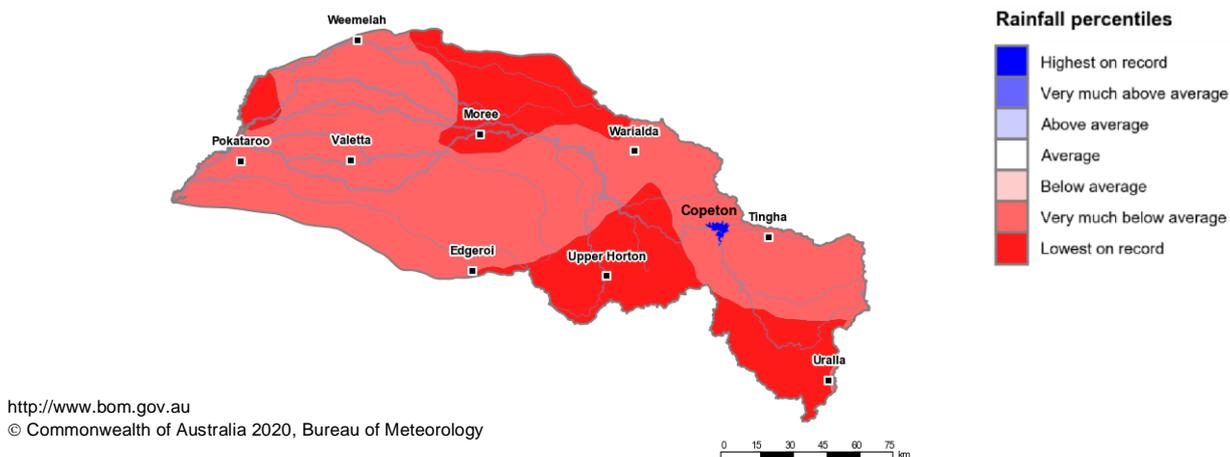

Figure 2: Rainfall percentiles since January 2017 (Compared to 1900-2019 long-term average) (Jan 2017 to Apr 2020)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia.

How much water is in the storages?

Storage volume: Copeton storage as at 1 May 2020

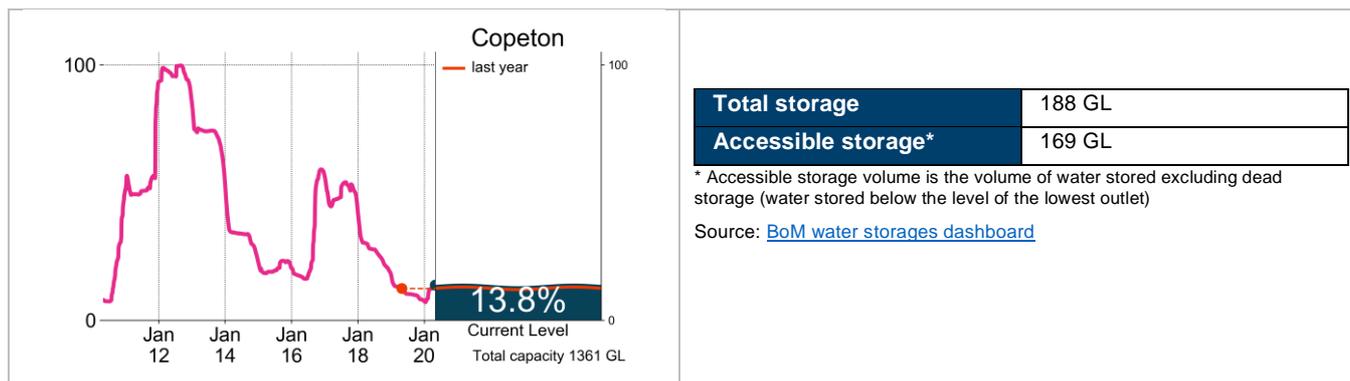

Figure 3: Current total storage (% of total capacity) compared to the last ten years

Who is the water for?

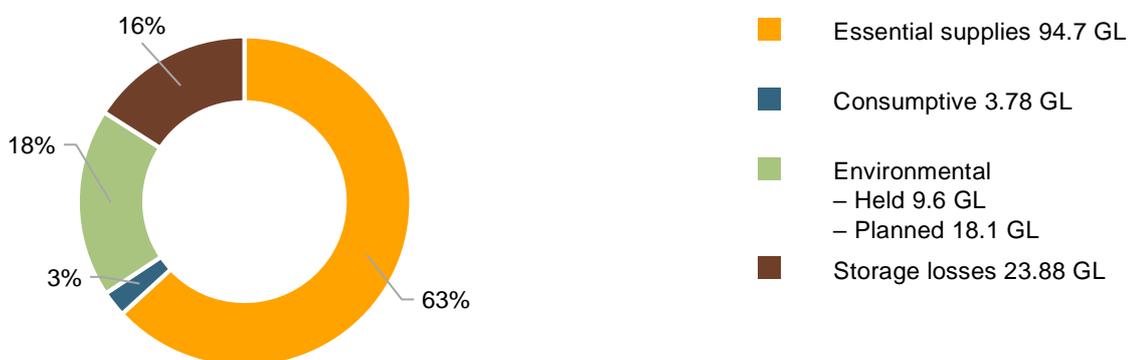

Figure 4: Volumes of water held in accounts for the 2019-20 water year (as at 31 March 2020)

NB: Allocation information shown here is water allocated, but not necessarily available, for various purposes as at 31 March 2020. In Drought Stage 2, there are limited water resources available. Water allocation figures shown here differ to those on WaterNSW's [Water Insights](#), which shows estimated water available over a two-year planning period (2019 to 2021).

Table 1: Allocation announcements (%) and market prices – Selected licence categories as at 1 May 2020

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement Prices (monthly median)	Allocation Price (median - last 7 days)
Stock & Domestic, Local Utility	100%	Same as most years	n/a	n/a
Gwydir High Security	100%	Same as most years	n/a	
Gwydir General Security	0%	Has occurred in four out of the last ten years	n/a	
Average Carryover (General Security)	3%	22% last year	n/a
