

Water Reporting Summary - NSW Murray and Lower Darling Catchments

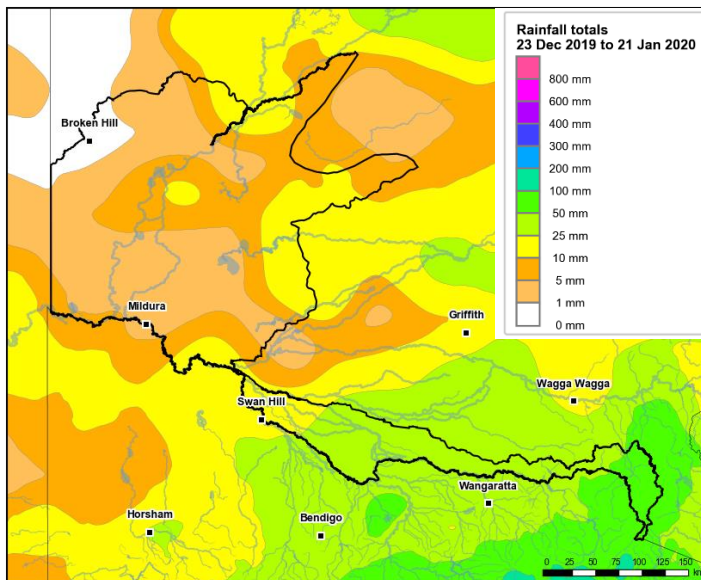

21 January 2020

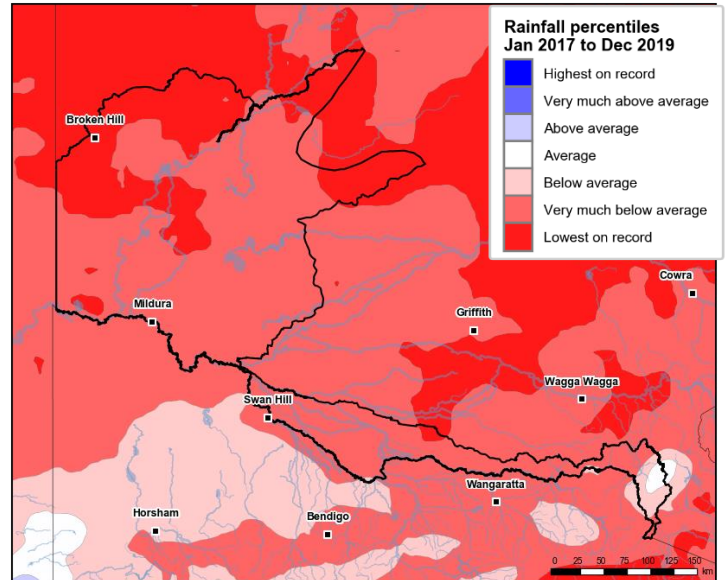

Overview

- Most of the NSW Murray catchment received 25 to 50 mm of rainfall in the last 30 days (concentrated mainly over the last two days). In contrast, most of the Lower Darling catchment received less than 10 mm or no rainfall in the last 30 days (Figure 1). The total area-average rainfall across both catchments was 11 mm. This recent patchy rainfall is in the context of the extended dry period since January 2017 with rainfall across the NSW Murray catchment being very much below average or lowest on record (Figure 2).
- Low storage volumes and inflows have led to Drought Stage 2 and 4 conditions in the NSW Murray and Lower Darling catchments, respectively, with low to no allocations for some entitlement holders (Figure 3 and Table 1). In Drought Stage 2 (Emerging drought), there has been limited water resources and multiple years of low flows. For Stage 4, there has been extremely low water resources and extreme drought with restrictions in place to manage remaining resources to meet critical human needs (NSW DPIE).
- Announced allocations for general security entitlement holders are currently 0%, which, for this time of year, has only occurred for two out of the last ten years for the NSW Murray and three out of the last ten years for the Lower Darling.

Figure 1: Rainfall totals for the last 30 days

Figure 2: Rainfall percentiles since January 2017
(Compared to 1900-2019 long-term average)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia.

How much water is in the storages?

Combined total storage (NSW share*): 1,337 GL (as at end Dec 2019)

*New South Wales' share of Dartmouth, Hume, Lake Victoria and Menindee Lakes storages

Source: [MDBA](#)

Storage	% Full (total storage capacity as at 21/1/2020)	% Full (same time last year)
Dartmouth	50%	68%
Hume	20%	34%
Lake Victoria	50%	66%
Menindee Lakes	<1%	3%

Who is the water for?

- Towns, Domestic and Stock 61 GL
- Consumptive
 - Allocation 160 GL
 - Carryover 264 GL
 - Conveyance 197 GL
- Environment
 - Held allocation 47 GL
 - Held carryover 36 GL
 - Planned 21 GL
- Reserve (critical needs, 2020-21 high priority needs, MDB agreement) 307 GL
- Losses (e.g. evaporation, transmission) 325 GL
- Other (SA entitlement/dilution flow) 338 GL

Figure 3: Volumes of water allocated for the 2019-20 water year (as at 21 January 2020)

Source: [Water Allocation Statement- NSW Department of Planning, Industry and Environment](#)

NB: Allocation information shown here is water allocated for various purposes as at 21 January 2019. It does not represent remaining available allocated water as it does not allow for water used, traded or new storage inflows (in excess of minimum assumptions). Water allocation figures shown here differ to those on WaterNSW's [Water Insights](#), which shows estimated water available over a two-year planning period (2019 to 2021).

Table 1: Allocation announcements (%) - Selected licence categories as at 21 January 2020

Licence category	Current announced allocation	Historic comparison (same time of year)
Stock and Domestic	100%	Same as most years
NSW Murray High Security	97%	Same as most years
Lower Darling High Security	30%	Lowest since 2007
NSW Murray General Security	0%	With carryover, lowest available water since 2009
Lower Darling General Security	0%	Has only occurred in three out of the last ten years
Average Carryover (General Security)	19% (NSW Murray) 18% (Lower Darling)	32% last year (NSW Murray) 15% last year (Lower Darling)
