

# Water Reporting Summary - Namoi Catchment

15 July 2020

## Overview

- In the last month, most of the Namoi catchment received 25 to 50 mm of rainfall, although some northern parts of the catchment, especially around Split Rock and Keepit Dams, received less than 25 mm. In contrast, small parts near the southern boundary of the catchment received up to 100 mm of rain (Figure 1). The total area-average rainfall across the catchment was 30 mm for the last 30 days. This recent patchy rainfall is in the context of the extended dry period since January 2017 with rainfall across the Namoi catchment being very much below average or lowest on record (Figure 2).
- The patchy rainfall received during July has helped to maintain root zone soil moisture at average to above average levels for most of the Namoi catchment. However, rainfall received in the last month has not translated into significant runoff and inflows into storages. Drought Stage 2 and 3 conditions continue for the Upper Namoi and Lower Namoi catchments, respectively. Drought Stage 2 reflects limited water resources and multiple years of low flows while for Stage 3 there have been severe water shortages (NSW DPIE). As a result, there are zero or low allocations for some entitlement holders and water trade is limited (Figures 3 and 4).
- Announced allocations for general security entitlement holders in the Upper and Lower Namoi are currently 0%, which is typical for the Lower Namoi for this time of year but has only occurred twice in the last ten years for the Upper Namoi (Table 1). A comprehensive water allocation statement for 2020-21 will be available in August 2020 (NSW DPIE).

## Recent conditions

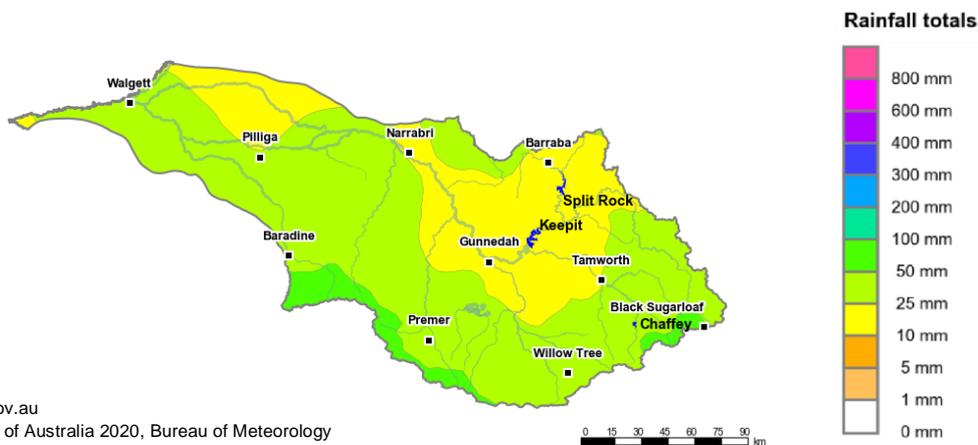

Figure 1: Rainfall totals for the last 30 days (16 June to 15 July 2020)

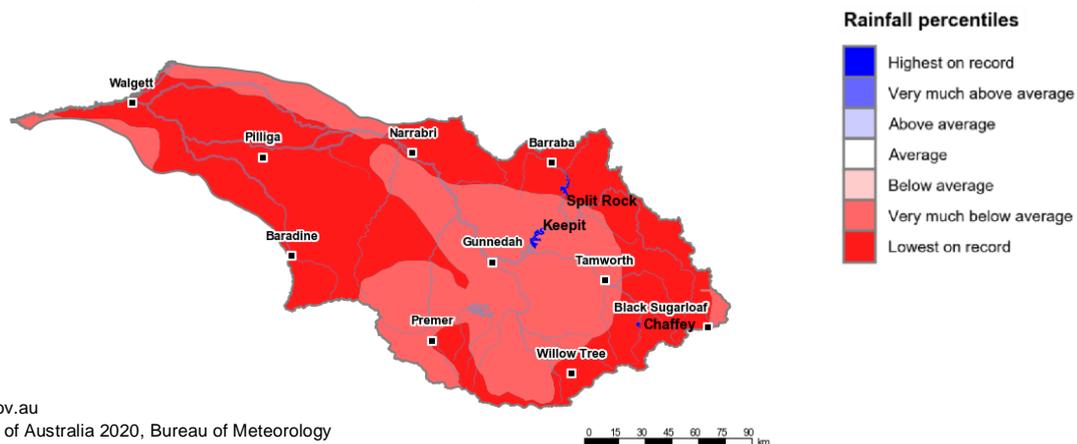

Figure 2: Rainfall percentiles since January 2017 (Compared to 1900-2019 long-term average) (Jan 2017 to June 2020)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia

## How much water is in the storages?

Storage volume: Split Rock, Keepit and Chaffey storages as at 15 July 2020

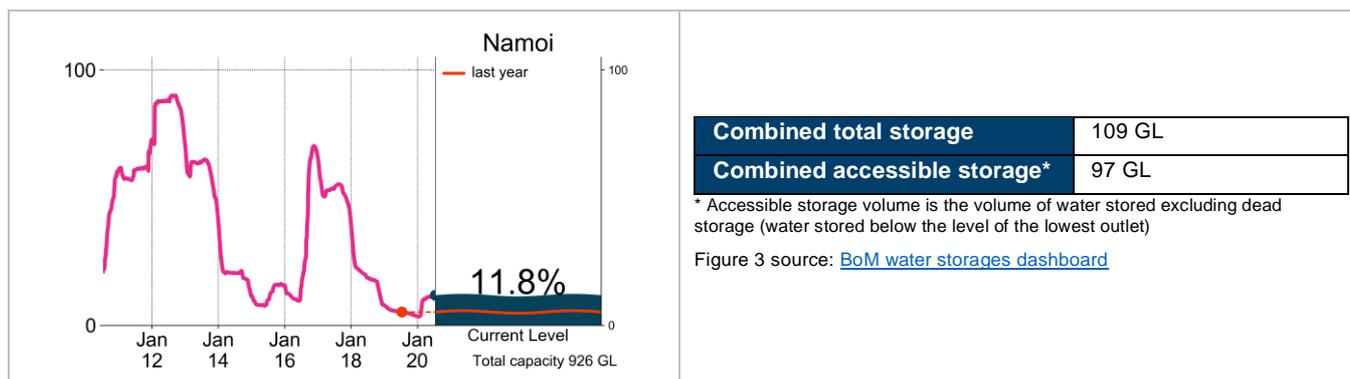

Figure 3: Current total storage (% of total capacity) compared to the last ten years

## Who is the water for?

Figure 4: Volumes of water held in accounts for the 2020-21 water year (as at 15 July 2020)

NB: Allocation information shown here is water allocated, but not necessarily available, for various purposes as at 15 July 2020. Water allocation figures shown here differ to those on WaterNSW's [Water Insights](#), which shows estimated water available over a two-year planning period (2020 to 2022).

Table 1: Allocation announcements (%) and market prices – Selected licence categories as at 15 July 2020

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement Prices (monthly median)	Allocation Price (median - last 7 days)
Stock & Domestic, Local Utility	100%	Same as most years	n/a	\$300/ML*
Upper & Lower Namoi High Security	90%	Typically opens with 100%	n/a	
Upper Namoi General Security	0%	0% has occurred twice for this time of year out of the last ten years	\$3,000/ML*	
Lower Namoi General Security	0%	0% has occurred eight out of the last ten years for this time of year	\$3,600/ML*	
Average Carryover or Starting balance on 1 July (General Security)	40% (Upper Namoi) 6% (Lower Namoi)	23% last year (Upper Namoi) 5% last year (Lower Namoi)	n/a	

\*Indicative - limited trade data
