

Water Reporting Summary - Namoi Catchment

16 March 2020

Overview

- In the last month, there was very welcome rainfall across the Namoi catchment. The central and downstream parts of the catchment received 50 to 100 mm, while as much as 200 mm fell over most other parts of the catchment (Figure 1). The total area-average rainfall across the catchment was 112 mm for the last 30 days. However, this recent rainfall is in the context of the extended dry period since January 2017 with rainfall across the majority of the Namoi catchment being lowest on record (Figure 2).
- With very dry catchment conditions, recent rainfall has not translated into significantly higher inflows and storage volumes but has allowed an easing of Drought Stage 4 to Drought Stage 3 conditions for the Namoi catchment. For Stage 3, there has been severe water shortages, with water delivery restricted to high priority demands (NSW DPIE). Consequently, relatively low or no allocations still remain for some entitlement holders (Figure 3 and Table 1).
- Announced allocations for general security entitlement holders are currently 0% which, for this time of year, is unprecedented for the Upper Namoi, For the Lower Namoi catchments, 0% general security allocations have occurred four times in the last ten years.

Figure 2: Rainfall percentiles since January 2017 (Compared to 1900-2019 long-term average). Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia.

How much water is in the storages (as at 16 March 2020)?

Storage volume: Split Rock, Keepit and Chaffey storages

Combined total storage	94 GL
Combined accessible storage*	82 GL
%Full (total storage capacity)	10%
%Full (same time last year)	6%

*Accessible storage volume is the volume of water stored excluding dead storage (water stored below the level of the lowest outlet)

Who is the water for?

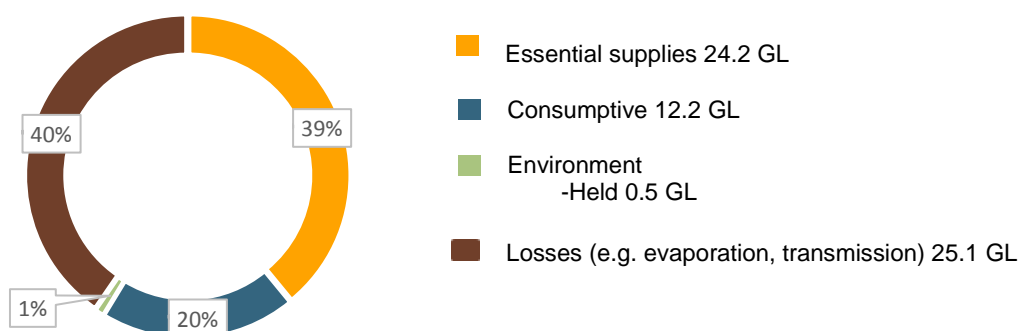

Figure 3: Volumes of water held in accounts for the 2019-20 water year (as at 29 February 2020)

Source: [Water Allocation Statement- NSW Department of Planning, Industry and Environment](#) and [CEWO](#)

NB: Allocation information shown here is water allocated, but not necessarily available, for various purposes as at 29 February 2020. Due to Drought Stage 3 conditions, the extremely limited available water is being directed towards essential supplies such as critical human needs.

Water allocation figures shown here differ to those on WaterNSW's [Water Insights](#), which shows estimated water available over a two-year planning period (2019 to 2021).

Table 1: Allocation announcements (%) - Selected licence categories as at 16 March 2020

Licence category	Current announced allocation	Historic comparison (same time of year)
Stock & Domestic, Local Utility	100%	Same as most years
Upper & Lower Namoi High Security	75%	100% in most years
Upper Namoi General Security	0%	Lowest on record (since 2004-05)
Lower Namoi General Security	0%	Has occurred in four out of the last ten years
Average Carryover or Starting balance on 1 July (General Security)	23% Upper Namoi 5% Lower Namoi	7% last year (Upper Namoi) 19% last year (Lower Namoi)
