

Water Reporting Summary - South Australian Murray

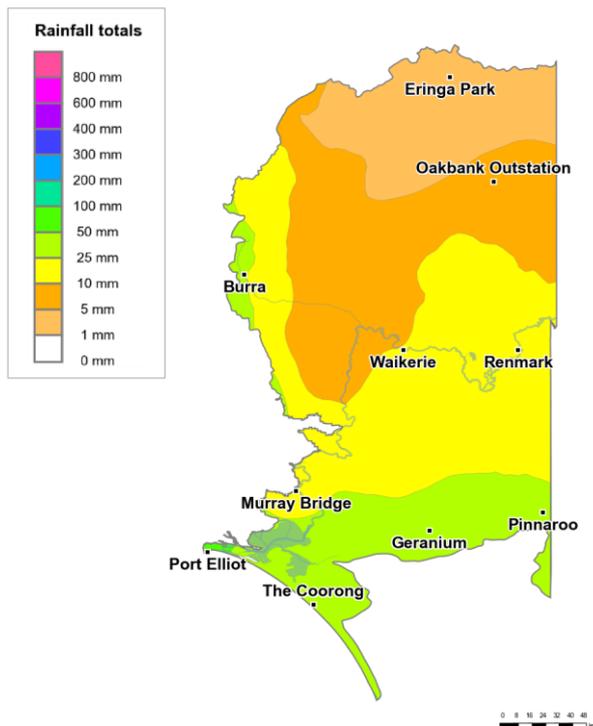

1 July 2020

Overview

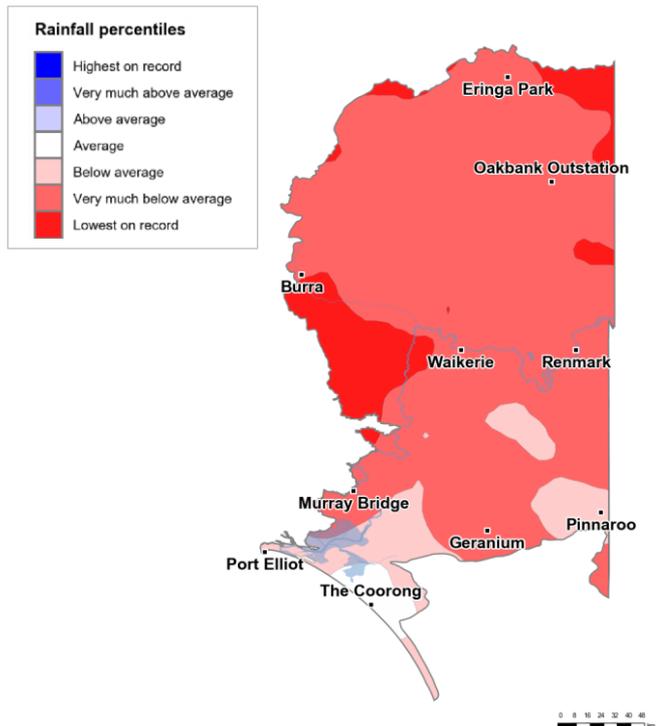

- In the last 30 days, most parts of the South Australian Murray catchment received 10 to 50 mm rainfall although some northern parts of the catchment received less than 10 mm. In contrast, coastal areas near Port Elliott and the Coorong received up to 100 mm of rain (Figure 1). The catchment area-average rainfall was 14 mm. This patchy rainfall is in the context of the extended dry period from January 2017 with rainfall across most of the South Australian Murray catchment mainly being very much below average or lowest on record (Figure 2).
- Water allocations to Class 3 high security entitlement holders opened at 54% (Figure 4). In six out of the last ten years, 100% allocation was announced at the beginning of the water year (1 July). However, projections suggest that even if dry conditions prevail over the next six months, allocations for Class 3 entitlements are likely to reach 100% by November 2020 ([SA DEW](#)).
- Allocation prices at the end of the 2019-20 water year were significantly lower (\$230 per ML) than their peak of over \$950 per ML in November 2019 (Table 1).

Figure 2: Rainfall percentiles since January 2017 (Compared to 1900-2019 long-term average) (Jan 2017 to June 2020)

Note: Rainfall percentiles for the period from January 2017 are shown as the Bureau of Meteorology considers January 2017 to be the start of the current dry period for eastern Australia.

How much water is there for the South Australian Murray?

The current projected minimum volume of water available to South Australia by the end of 2019-20: 1,195 GL*

*Based on the MDBA's current assessment of water resource availability. It provides for an allocation of 499 GL for consumptive entitlements and an allowance for dilution and losses, and excludes water held under South Australia's Storage Right (356.3 GL as at end May 2020). The storage right has been set aside under Schedule G of the Murray-Darling Basin Agreement to meet future critical human water needs and private carryover.

How much water is in the MDBA operated storages?

Total volume in the MDBA operated storages: 4210 GL (as at 1 July 2020)

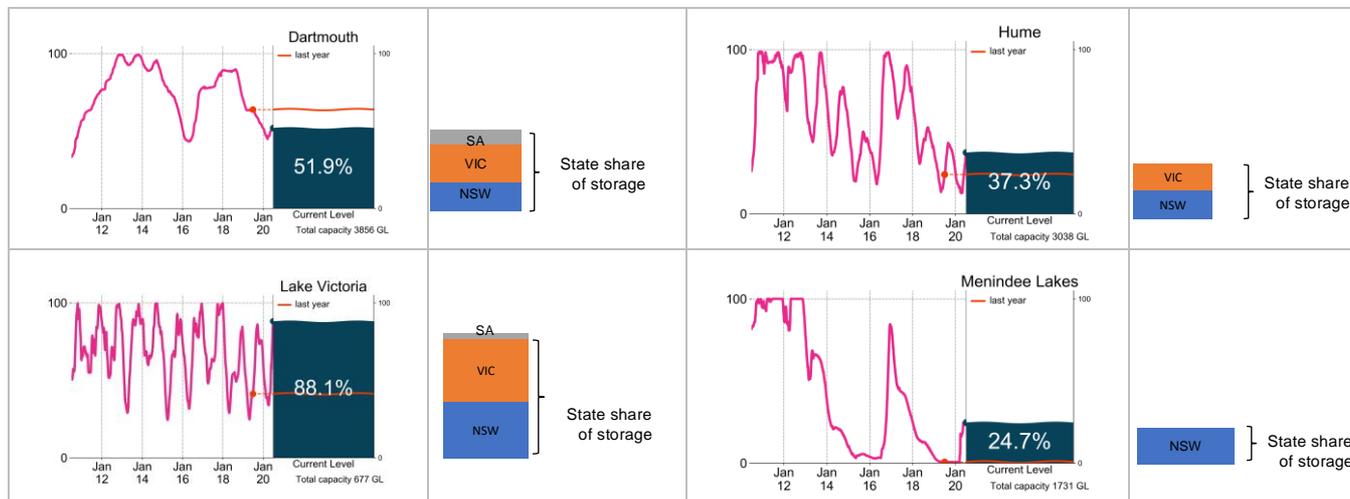

Figure 3: Current total storage (% of total capacity) as at 1 July 2020 compared to the last ten years (State shares updated end May 2020)

NB: Information shown is water allocated for various purposes in 2020-21 and is not adjusted for water used or traded.

Table 1: Allocation announcements (%) and market prices – Selected licence categories as at 1 July 2020

Licence category	Announced allocation	Historic comparison (same time of year)	Entitlement Prices (monthly median)	Allocation Price (median - last 7 days)
SA Murray Class 1 (stock and domestic)	100%	Same as most years	n/a	\$230/ML
SA Murray Class 3 (irrigation)	54%	In six out of the last ten years, 100% allocation was announced on 1 July.	\$6,900/ML
