

Water Reporting Summary - Victorian Murray Catchment

2 March 2020

Overview

- In the last month, upstream parts of the Victorian Murray catchment received up to 100 mm of rainfall, mostly falling in the first half of February. Most parts of the Victorian Murray received 10 to 25 mm (Figure 1). The area-average rainfall for the catchment was 58 mm. This patchy recent rainfall is in the context of the extended dry period since January 2017 with rainfall across the Victorian Murray catchment mostly being very much below average (Figure 2).
- Low storage volumes and inflows have led to low current allocation volumes (Figure 3). Looking forward to the 2020-21 summer, if storages receive similar inflows to those received during 2019-20, announced allocations (known as seasonal determinations) would only be expected to reach about 45% for high-reliability water shares (Northern Victoria Resource Manager).
- Announced allocations for high-reliability water shares are currently 59%, which is the lowest level for this time of year since 2008-09 (Table 1).

How much water is in the storages?

Combined total storage (VIC share*): 1,281 GL (as at end Jan 2020)

*Victoria's share of Dartmouth, Hume, Lake Victoria and Menindee Lakes storages

Storage	% Full (total storage capacity as at 2/3/2020)	% Full (same time last year)
Dartmouth	47%	64%
Hume	16%	27%
Lake Victoria	39%	48%
Menindee Lakes	<1%	1%

Who is the water for?

Figure 3: Volumes of water allocations currently available or remaining (% of total remaining) (as at 2 March 2020)

Source: [Northern Victoria Resource Manager](#)

NB: Allocation information shows water currently available in allocation accounts and remaining commitments. Information published by the Northern Victoria Resource Manager differs from information published on the Victorian Water Register as the former includes preliminary environmental water holder use and volumes for operational use by Goulburn-Murray Water private water shareholders.

Table 1: Allocation announcements (seasonal determinations) (%) - Selected licence categories as at 2 March 2020

Licence category	Current announced allocation	Historic comparison (same time of year)
VIC Murray High-Reliability Water Share	59%	Lowest since 2008-09
VIC Murray Low-Reliability Water Share	0%	Same as most years
