Monthly Weather Review Australia May 2018

The *Monthly Weather Review - Australia* is produced by the Bureau of Meteorology to provide a concise but informative overview of the temperatures, rainfall and significant weather events in Australia for the month.

To keep the *Monthly Weather Review* as timely as possible, much of the information is based on electronic reports. Although every effort is made to ensure the accuracy of these reports, the results can be considered only preliminary until complete quality control procedures have been carried out. Any major discrepancies will be noted in later issues.

We are keen to ensure that the *Monthly Weather Review* is appropriate to its readers' needs. If you have any comments or suggestions, please contact us:

Bureau of Meteorology
GPO Box 1289

Australia
media@bom.gov.au
www.bom.gov.au

Units of measurement

Except where noted, ***temperature*** is given in degrees Celsius (°C), ***rainfall*** in millimetres (mm), and ***wind speed*** in kilometres per hour (km/h).

Observation times and periods

Each station in Australia makes its main observation for the day at 9 am local time. At this time, the precipitation over the past 24 hours is determined, and maximum and minimum thermometers are also read and reset. In this publication, the following conventions are used for assigning dates to the observations made:

Maximum temperatures are for the 24 hours *from* 9 am on the date mentioned. They normally occur in the afternoon of that day.

Minimum temperatures are for the 24 hours *to* 9 am on the date mentioned. They normally occur in the early morning of that day.

Mean temperatures are the average of the daily maximum and daily minimum temperatures.

Daily rainfall is for the 24 hours *to* 9 am on the date mentioned. This means a significant fraction of the rain may have occurred on the previous calendar day.

Monthly rainfall is for the period from 9 am on the last day of the previous month to 9 am on the last day of this month.

Maximum daily wind gusts are in the 24 hours from midnight to midnight.

Climatological values

The climatological averages shown in the text and tables are generally long-term means based on observations from the years 1961–1990. They are not shown for sites with less than 25 years of record in that time, as they cannot then be calculated reliably. Climatological extremes are generally taken from all available years of record; the number of years can vary markedly from site to site.

Records

The tables of records are not exhaustive, as they only show sites with at least 30 years of record. This may exclude locations where a new site has been established; this means even some major cities and towns may not be listed.

Maps

The temperature and rainfall maps are intended to give an overview of the country. There could be discrepancies between the values shown on these maps and those at individual locations, as a result of the way the maps are generated. A wide range of maps of rainfall, temperature and other variables, covering the whole country and smaller regions can be found at www.bom.gov.au/climate/maps.

Accessing data

Tables of daily values for selected sites are included toward the back of the *Monthly Weather Review*. Data from many more sites and for other times are available from www.bom.gov.au/climate/data/.

Overview

- Overall, days were warmer than average for Australia during May, and nights cooler than average
- National monthly mean temperature slightly above average for May
- Fourth-driest May on record for Australia, with rainfall below average across most of Australia except parts of the southeast
- Flooding from heavy rain in southeast Tasmania, including Hobart

May was warmer than average for Australia as a whole; the national monthly mean temperature was 0.18 °C above average. Maximum temperatures were particularly warm, with a national anomaly of +0.86 °C. The national mean minimum temperature was cooler than average at 0.50 °C below average for May.

May was an exceptionally dry month for Australia with below average monthly total rainfall across most of the country. It was the driest May for the nation since 2008 and the fourth-driest May on record (May 2008 was the driest on record). For New South Wales as a whole May was the eighth-driest on record, while for Queensland it was the tenth-driest on record.

Areal averages in May 2018

	Rainfall anomaly	Mean maximum temperature anomaly	Mean minimum temperature anomaly	Mean temperature anomaly
Australia	−69% 3rd-lowest	+0.86 °C	−0.49 °C	+0.19 °C
Western Australia	−74%	+1.41 °C	−0.47 °C	+0.47 °C
Northern Territory	−97% 9th-lowest	+0.28 °C	−1.16 °C	−0.43 °C
South Australia	−58%	+0.42 °C	−0.57 °C	−0.07 °C
Queensland	−84%	+0.59 °C	−0.23 °C	+0.18 °C
New South Wales	−75% 7th-lowest	+1.31 °C	−0.34 °C	+0.48 °C
Victoria	−10%	+0.61 °C	+0.46 °C	+0.54 °C
Tasmania	+6%	+0.52 °C	+0.76 °C	+0.64 °C

Extremes in May 2018

	Hottest day	Coldest night	Wettest day	Warmest overall	Coolest overall	Wettest overall	Strongest wind gust
Australia	38.3 °C at Roebourne Aero (WA) on the 10th	–6.7 °C at Perisher Valley AWS (NSW) on the 25th and Glen Innes Airport AWS (NSW) on the 31st	236.2 mm at kunanyi (Mount Wellington Pinnacle) (Tas.) on the 11th	29.7 °C at Coconut Island (Qld)	2.4 °C at Mount Hotham (Vic.)	at least 562.8 mm at Mount Read (Tas.)(some data are missing, and the true rainfall total is higher)	148 km/h at kunanyi (Mount Wellington Pinnacle) (Tas.) on the 22nd
Western Australia	38.3 °C at Roebourne Aero on the 10th	–2.9 °C at Eyre on the 21st	93.8 mm at Acton Park on the 25th	28.5 °C at Browse Island and Troughton Island	12.9 °C at Collie East	162.6 mm at Cowaramup	115 km/h at Cape Leeuwin on the 25th
Northern Territory	37.5 °C at Mount Bundey South (Defence) on the 1st and Bradshaw on the 4th	–1.6 °C at Arltunga on the 7th	18.2 mm at McCluer Island on the 2nd	28.6 °C at Cape Wessel	14.8 °C at Alice Springs Airport	27.0 mm at Cape Wessel	70 km/h at McCluer Island on the 17th and Noonamah Airstrip on the 18th
South Australia	31.5 °C at Oodnadatta Airport on the 2nd	–1.2 °C at Keith (Munkora) on the 16th	48.0 mm at Uraidla on the 4th	16.5 °C at Moomba Airport	10.3 °C at Mount Lofty	117.6 mm at Kalangadoo (Mirnat)	100 km/h at Cape Jaffa (The Limestone) on the 10th
Queensland	36.0 °C at Burketown Airport on the 4th	–3.8 °C at Stanthorpe Leslie Parade on the 21st	118.0 mm at Russell River on the 18th	29.7 °C at Coconut Island	11.9 °C at Applethorpe	348.8 mm at Russell River	80 km/h at Double Island Point Lighthouse on the 6th
New South Wales	31.0 °C at Wanaaring Post Office on the 3rd	–6.7 °C at Perisher Valley AWS on the 25th and Glen Innes Airport AWS on the 31st	113.6 mm at Smiths Lake (Patsys Flat Road) on the 14th	18.9 °C at South West Rocks (Smoky Cape Lighthouse)	2.6 °C at Thredbo AWS	163.6 mm at Thredbo Village	115 km/h at Thredbo AWS on the 3rd and Montague Island Lighthouse on the 12th
Victoria	29.6 °C at Point Hicks (Lighthouse) on the 3rd	–6.0 °C at Mount Hotham on the 11th	95.0 mm at Cann River on the 12th	14.5 °C at Gabo Island Lighthouse	2.4 °C at Mount Hotham	292.6 mm at Wyelangta	143 km/h at Mount Hotham on the 11th and 12th
Tasmania	25.3 °C at Campania (Kincora) on the 1st	–6.1 °C at Liawenee on the 25th	236.2 mm at kunanyi (Mount Wellington Pinnacle) on the 11th	13.7 °C at Hogan Island	3.7 °C at kunanyi (Mount Wellington Pinnacle)	at least 562.8 mm at Mount Read (some data missing, total should be higher)	148 km/h at kunanyi (Mount Wellington Pinnacle) on the 22nd

In this table *Hottest day* is the highest daily maximum temperature, *Coldest night* is the lowest daily minimum temperature, *Wettest day* is the highest daily rainfall total, *Warmest overall* is the highest mean monthly temperature, *Coolest overall* is the lowest mean monthly temperature and *Wettest overall* is the highest total monthly precipitation.

Significant weather

Record-breaking rain in southeast Tasmania

A complex low pressure system crossed Tasmania on the 10th, then deepened to the northeast during the 11th bringing strong, gusty and moist southerly flow over the State.

Rain and thunderstorms brought exceptionally high rainfall to the southeast of Tasmania, in particular to Hobart and the nearby Wellington Range where almost all sites reported their highest May daily rainfall on record (and in some cases their wettest day for any time of year) in the 24 hours to 9 am on the 11th.

The daily totals of 236.2 mm at kunanyi (Mount Wellington Pinnacle), and 226.4 mm at Leslie Vale are now ranked second and third respectively in the list of the top three highest May daily rainfall ever recorded in Tasmania (behind 258.0 mm at Gray in 18 May 1986).

Much of the rain fell in about 6 hours on the evening of the 10th, leading to flash flooding in many streams in the southeast. The very heavy rain was caused by a highly active line of thunderstorms that 'trained' over Hobart over a number of hours, with each thunderstorm following a similar path as it moved in from the east. Comparison of the rainfall with standard design tools show the event had an annual exceedance probability of much less than 1%.

There was extensive damage to bridges, roads, buildings and other infrastructure, with reports of over fifty million dollars in insurance claims together with nearly thirty million dollars in damage to municipal infrastructure.

Severe winds, thunderstorms and snow in southeastern Australia

5 to 7 May

Cold fronts that crossed Tasmania on the 5th and again on the 7th brought gale force winds, locally storm force in the far south. Exposed locations reported gusts over 110 km/h on the 5th, peaking at 130 km/h at Maatsuker Island. On the 7th, sites across the State reported gusts over 90 km/h, with a peak of 157 km/h at Maatsuyker Island. There were several reports of downed trees and damaged power lines.

10 to 11 May

Squally showers and thunderstorms embedded in a vigorous southerly airstream to the west of an intensifying low pressure system near Tasmania affected areas south and east of about Adelaide on the 10th.

Southerly winds averaging 60 to 70 km/h with gusts of 80 to 100 km/h were recorded at Hindmarsh Island, Cape Willoughby and Cape Jaffa from around sunrise until late afternoon. The highest recorded gust was 100 km/h at Cape Jaffa. Numerous tree limbs were brought down and there was some minor building damage across parts of the central and southeast of South Australia, including the Adelaide area.

The low pressure system, which delivered record-breaking rain to southeast Tasmania on the 10th, also produced strong and gusty winds that brought down trees and power lines. Strong south to southeasterly winds with gusts over 90 km/h were reported at several sites, which is an uncommon occurrence and may have increased their ability to inflict damage. Kunanyi (Mount Wellington Pinnacle) registered a southerly gust of 131 km/h on the 10th, and Cape Grim reached a 128 km/h south-southwesterly gust on the 11th.

The low pressure system and associated cold fronts also brought wintry weather across much of southeastern mainland on the 11th. Parts of inland New South Wales were affected by cold temperatures, rain, and strong southerly and southwesterly winds, with several centimetres of snow reported in the Central Tablelands and the alpine resorts. Snow also fluttered down on the runway at Orange Airport during the morning of the 11th. Several sites along the South Coast recorded wind gusts in excess of 100 km/h on the morning of the 12th.

21 to 22 May

Another sequence of cold fronts on the 21st and 22nd brought gusts well over 100 km/h to many parts of Tasmania, leading to downed power lines, felled trees and significant structural damage. The peak gust on top of kunanyi / Mount Wellington was 148 km/h on the 22nd, with Hobart (Ellerslie Road) reporting gusts to 113 km/h late on the 21st and early on the 22nd; several other sites, mostly in the south, reported gusts over 90 km/h. It is likely that the strong gusts in Hobart were caused by "downslope winds": strong winds at mountain top height that "slide" down the terrain towards low lying ground. The phenomenon is not common over Hobart.

Severe thunderstorms in South Australia

A complex low pressure system south of the Great Australian Bight combined with an amplifying upper level trough to produce a band of thundery rain over

western South Australia late on the 2nd, which then moved across central and eastern districts on the 3rd.

Following the rain, multiple waves of gusty showers and thunderstorms affected the south of the State during the afternoon and evening on the 3rd and into the early hours on the 4th. The strongest wind gusts were recorded when a line of gusty showers moved across central districts around midnight. Wind gusts to 98 km/h were recorded at Adelaide Airport and 91 km/h at Mount Crawford. A strong cold front moved across South Australia during the 28th. Warm and unstable conditions ahead of the front led to thunderstorm development over central and eastern districts of South Australia during the afternoon and evening.

One line of thunderstorms moved across the South East in the early evening. At Monbulla, southwest of Penola, there was significant wind damage to a row of large cypress trees. The type of damage suggests a tornado occurred.

Gusty showers in a cold, unstable southwest flow affected central parts of South Australia, including Adelaide, during the day on the 29th. One of these showers produced a wind gust to 91 km/h at Roseworthy in the Mid North.

Strong winds and heavy rainfall in Western Australia

A strong cold front followed by the passage of a deep low moved through western and southern parts of Western Australia between the 24th and 26th, produced heavy rainfall, damaging winds and storm surges to the southwest of the State.

A significant storm surge was recorded along the west and south coasts, tidal stations along the west coast from Cape Leeuwin to Geraldton recorded surges of between 60 and 70 cm. The beach front of Busselton was inundated with a large bank of seaweed and significant erosion occurred at Fremantle's Port Beach. A possible tornado was sighted at Busselton in the evening on the 24th. DFES received over 200 calls for help.

Bushfires in southwest Western Australia

Several significant fires burnt in southwest Western Australia during the last week of the month. In the lead-up to the fires, there were unseasonably warm and dry conditions over the region during the first two weeks of May. Prior to the passage of the first strong cold front of the season, strong northerly winds and low relative humidity occurred over the region. Over 60 fires were reported over the southwest of Western Australia on 24th and 25th.

Synoptic summary

In May, the mean sea level pressure was well above average across most of mainland Australia, with positive anomalies of 5 hPa or higher covering South Australia and extending to areas of southeastern Western Australia, Central Australia, western Queensland and western New South Wales, with infrequent rain bearing systems passing the south of the country. Dry conditions dominated most of the continent.

At the start of the month, a large high pressure system moved slowly over eastern Australia and the Tasman Sea with a firm ridge directing onshore southeasterly flow along the east coast. A series of cold fronts and surface troughs embedded in the westerly flow tracked over southern Australia, producing moderate falls in the southeast. Another ridge of high pressure to the country's west then moved across southern Australia.

A surface and upper-level trough near the southeastern Queensland coast produced widespread showers and moderate falls and in adjacent inland districts on the 7th.

On the 10th and 11th, a cold front and a complex area of low pressure was situated over the eastern Bass Strait and Tasman Sea, while a strong high pressure system established in the Great Australian Bight, directed strong and gusty southerly winds across South Australia, Victoria and Tasmania. The vigorous airflow associated with a series of cold fronts and the complex low pressure system brought cold, wet and windy weather to southeastern Australia and heavy rainfall to Tasmania.

The continent was dominated by high pressure and fine conditions for much of the middle of the month. A westerly flow and a weak cold front affected Tasmania and Victoria coast.

Around the 18th, a surface trough located over inland Queensland produced showers, while a southeasterly onshore flow persisted about the north tropical coast of Queensland for several days.

In the wake of a high pressure system moving across the southeast of the country, a strong cold front and pre-frontal trough approached the west coast of Western Australia from the 24th, with an associated deep low pressure system to the southwest of the State. The frontal systems tracked eastwards and affected western parts of Western Australia with moderate to heavy falls. A series of cold fronts tracked across the southern coast and southeast Australia at the end of May.

Temperatures

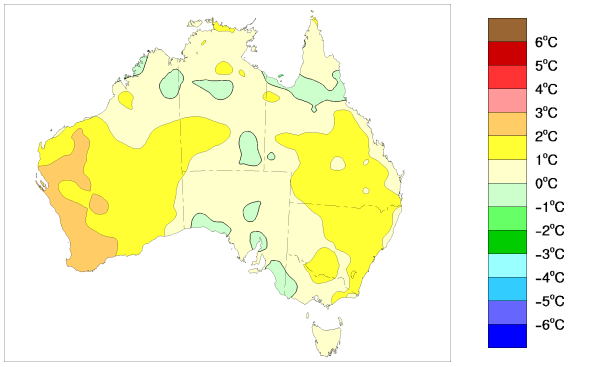
May was warmer than average for Australia as a whole; the national monthly mean temperature was 0.18 °C above average. The Northern Territory and South Australia were below average, while remaining States and Territory had a warmer than average May in terms of mean temperature.

The warmest on average was Coconut Island with 29.7 °C and the coolest on average was Mount Hotham with 2.4 °C.

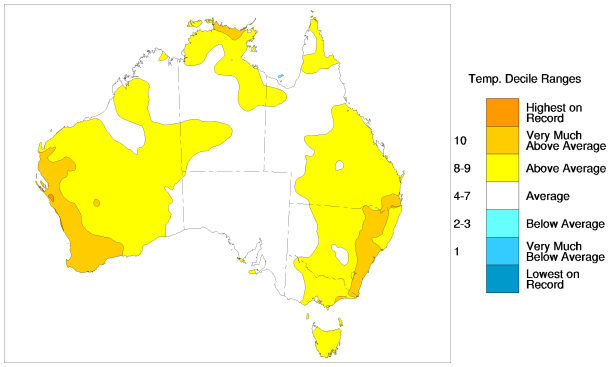
Maximum temperatures

Maximum temperatures were particularly warm, with a national anomaly of +0.86 °C. Mean monthly maximum temperatures were above average for most of western, eastern and tropical north of Australia, and in decile 10 (the warmest 10% of historical observations) for May along the west coast of Western Australia and across most of eastern New South Wales, extending into eastern Victoria and southeast Queensland; also a coastal area of the Top End.

Anomalies of mean daily maximum temperature in May 2018



Decile rank of mean daily maximum temperature in May 2018



Maxima were near average for South Australia, western and Gulf Country Queensland, and an area of northwestern Australia spanning the eastern Kimberley and Victoria River District in the Northern Territory.

In the first week of the month, days were warmer than usual across much of Australia ahead of a cool change associated with a cold front that tracked across the southwest. Persistent, warm sunny days resulted in above average maxima for much of the first half of the month from the western, northern and eastern Australia. The 3rd was particularly warm, with several sites in southern New South Wales and Victoria having their warmest May day on record (see page 14). The hottest day was at Roebourne Aero in the Pilbara coast of Western Australia with 38.3 °C on the 10th.

Temperatures then plummeted from the 10th across Victoria, as air with an origin over Antarctica swept across the southeast following the passage of a complex low pressure system. Mount Hotham only managed to reach −2.6 °C during the day of 10th. A surge of cold air pushed as far north as Darwin and the Top End, as a strong high pressure system directed a southeasterly flow across the Territory.

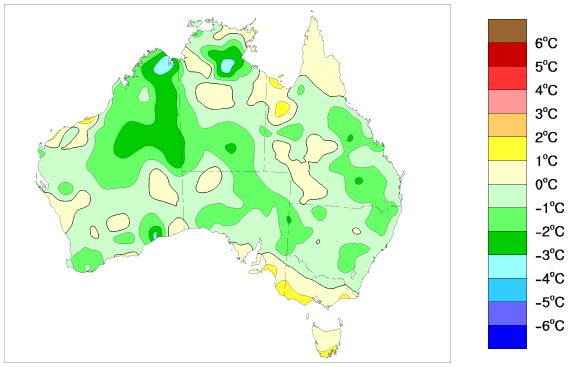
In the middle of the month, cold dry air resulted in cooler days across most of Australia apart for southwest Western Australia.

At the end of the month, a strong cold front tracked across the west, south and then southeast of Australia, bringing cool days in its wake.

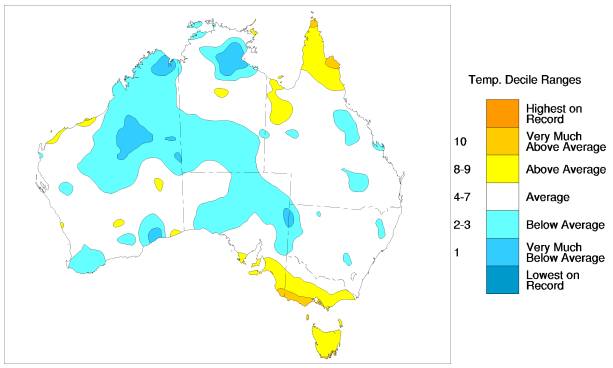
Minimum temperatures

The national mean minimum temperature was 0.50 °C below average for May. Minimum temperatures for the month were above average across Tasmania, southeastern South Australia, most of Victoria away from the Murray River, and across the Cape York Peninsula in Queensland. Minima were cooler than average for large areas of northeast and southern coast areas in Western Australia, for the south of the Northern Territory and the southeastern Top End, and for much of pastoral South Australia.

Anomalies of mean daily minimum temperature in May 2018



Decile rank of mean daily minimum temperature in May 2018



Warm nights were experienced across central Western Australia, central and eastern Australia at the start of the month. A cold front produced cool nights in the southwest and the southern mainland during the first half of the month.

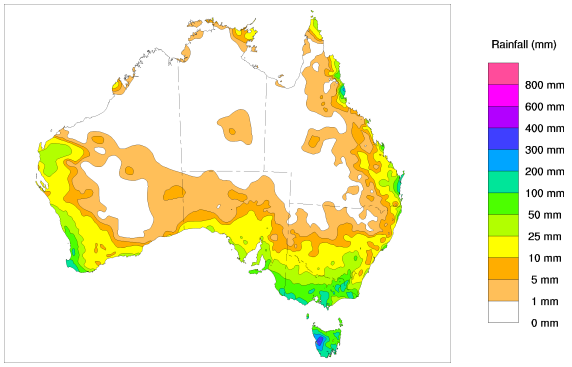
In the middle of the month, calm and clear skies resulted in cold nights across most of Australia as a high pressure system lingered over southern Australia.

A cold southerly airflow resulted in very cold nights in southeast Australia at the end of May. Both Perisher Valley AWS and Glen Innes Airport in New South Wales recorded the lowest temperature of the month with −6.7 °C on the 25th and 31st respectively.

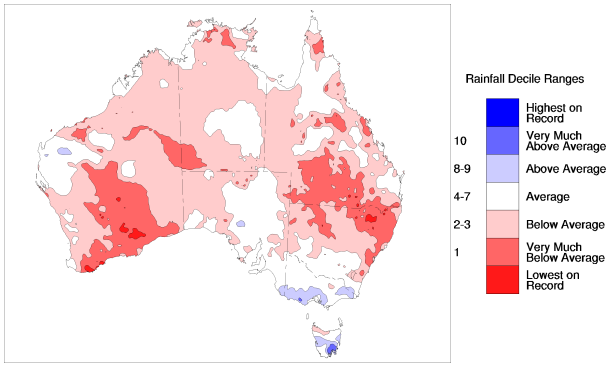
Rainfall

May 2018 was an exceptionally dry month for Australia. Nationally, it was the driest May since 2008 and the fourth-driest May on record (May 2008 was Australia's driest May on record). Monthly rainfall totals were below average for most of Australia.

Total rainfall in May 2018



Decile rank of total rainfall in May 2018



Rainfall was in the lowest 10% of historical observations (decile 1) for May for large areas of central and southern Western Australia, northern and eastern New South Wales, and southern Queensland. For New South Wales as a whole, it was the eighth-driest May on record, while for the Northern Territory it was the tenth-driest on record. Many stations in Western Australia, New South Wales and Queensland received record low May rainfall or their lowest May rainfall since at least 1982 (see page 15).

At the start of the month, a moist onshore flow brought showers and moderate rainfall totals to the north tropical Queensland coast. In the first week of the month over the south, a series of cold fronts produced a vigorous westerly flow and moderate falls from southeastern South Australia, across southwestern Victoria and along the inland slopes of the Great Dividing Range from central Victoria to the Snowy Mountains in New South Wales. Moderate falls were also recorded in northern and western Tasmania. At the end of the first week, widespread showers and moderate falls were reported across southeastern Queensland and in adjacent inland districts.

A complex low pressure system crossed Tasmania on the 10th, then deepened to the northeast during the 11th bringing strong, gusty and moist southerly flow over Tasmania. Rain and thunderstorms brought exceptionally high rainfall to the southeast Tasmania, in particular to Hobart and the nearby Wellington Range where numerous sites reported their wettest May day on record, and in some cases their wettest day for any time of year (see page 15). Much of the rain fell in about 6 hours on the evening of the 10th, leading to flash flooding in many streams in the southeast.

The daily totals of 236.2 mm at kunanyi (Mount Wellington Pinnacle) and 226.4 mm at Leslie Vale are now ranked second and third in the list of highest May daily rainfalls ever recorded in Tasmania. Rain cleared off the mainland and Tasmania by the 13th.

It was relatively dry over much of the continent until the 18th, when an inland surface trough over Queensland triggered showers and produced moderate fall in central Queensland. A westerly flow over Tasmania resulted in moderate falls along western Tasmania. A persistent onshore flow produced showers about the north tropical coast of Queensland for several days.

A strong cold front moved across the west of Western Australia on the 24th and a deep low pressure system tracked south of the State in the following days. These systems produced the first significant rainfall for the season in western parts the South West Land Division.

A cold front and a complex area of low pressure tracked across southeastern Australia and eastern New South Wales, generating moderate falls during the last week of the month.

Mean is the average of the daily maximum temperature for May 2018; it is only shown if there are sufficient days available. *Anom* is the difference between the mean daily maximum temperature for May 2018 and the long-term average maximum temperature for May. Anomalies are only shown if there are sufficient years of climate record available. The lowest and highest maximum temperature for each site for May 2018 is highlighted.Not all observations are shown here. Data from many more sites and for other times are available at www.bom.gov.au/climate/data/.

Daily and mean minimum temperatures for May 2018

Mean is the average of the daily minimum temperature for May 2018; it is only shown if there are sufficient days available. *Anom* is the difference between the mean daily minimum temperature for May 2018 and the long-term average minimum temperature for May. Anomalies are only shown if there are sufficient years of climate record available. The lowest and highest minimum temperature for each site for May 2018 is highlighted.Not all observations are shown here. Data from many more sites and for other times are available at www.bom.gov.au/climate/data/.

Total is the total precipitation for May 2018; a missing total indicates there is concern about the quality of some of the daily values. *Avg* is the long-term average total precipitation for May. Long-term average is only shown if there are sufficient years of climate record available. Reports of zero precipitation are shown as ". ". When a reading was accumulated over more than one day, "*»*" is shown on the days that are part of the accumulation.Not all observations are shown here. Data from many more sites and for other times are available at www.bom.gov.au/climate/data/.

Total is the total precipitation for May 2018; a missing total indicates there is concern about the quality of some of the daily values. *Avg* is the long-term average total precipitation for May. Long-term average is only shown if there are sufficient years of climate record available. Reports of zero precipitation are shown as ". ". When a reading was accumulated over more than one day, "»" is shown on the days that are part of the accumulation.Not all observations are shown here. Data from many more sites and for other times are available at www.bom.gov.au/climate/data/.
