Monthly Weather Review

New South Wales

September 2009

Australian Government
Bureau of Meteorology

The *Monthly Weather Review - New South Wales* is produced twelve times each year by the Australian Bureau of Meteorology's New South Wales Climate Services Centre.

It is intended to provide a concise but informative overview of the temperatures, rainfall and significant weather events in New South Wales for the month.

To keep the *Monthly Weather Review* as timely as possible, much of the information is based on electronic reports. Although every effort is made to ensure the accuracy of these reports, the results can be considered only preliminary until complete quality control procedures have been carried out. Major discrepancies will be noted in later issues.

We are keen to ensure that the *Monthly Weather Review* is appropriate to the needs of its readers. If you have any comments or suggestions, please do not hesitate to contact us:

Units of measurement

Except where noted, ***temperature*** is given in degrees Celsius (°C), ***rainfall*** in millimetres (mm), and ***wind speed*** in kilometres per hour (km/h).

Observation times and periods

Each station in New South Wales makes its main observation for the day at 9 am local time. At this time, the precipitation over the past 24 hours is determined, and maximum and minimum thermometers are also read and reset. In this publication, the following conventions are used for assigning dates to the observations made:

Maximum temperatures are for the 24 hours *from* 9 am on the date mentioned. They normally occur in the afternoon of that day.

Minimum temperatures are for the 24 hours *to* 9 am on the date mentioned. They normally occur in the early morning of that day.

Daily rainfall is for the 24 hours *to* 9 am on the date mentioned. This means a significant fraction of the rain may have occurred on the previous calendar day.

Monthly rainfall is for the period from 9 am on the last day of the previous month to 9 am on the last day of this month.

Maximum daily wind gusts are in the 24 hours from midnight to midnight.

Climatological values

The climatological averages shown in the text and tables are generally long-term means based on observations from all available years of record, which vary widely from site to site. They are not shown for sites with less than 20 years of record, as they cannot then be calculated reliably. Climatological extremes are generally taken from available observations from all available years of record. The number of years can vary substantially from site to site.

Overview

Another dry, warm month was experienced over NSW during September. Above average temperatures were maintained for most of the month with a few locations experiencing record high average maximum and minimum temperatures, especially on the Central Coast. Major duststorms were widespread over the state from the 23rd to 26th and nearly 100 bushfires were reported at various locations along the coast for much of the month.

- Above average daytime and night time temperatures
- 11th warmest September on record for average maximum temperatures
- 11th consecutive September with above average maximum temperatures
- Below average rainfall for NSW and the Murray Darling Basin
- Extensive duststorms reported across NSW

Extremes in September 2009

Hottest day
(Highest daily maximum temperature)
35.8 °C at Brewarrina Hospital on the 17th

Warmest days on average
(Highest mean daily maximum temperature)
27.3 °C at Casino Airport

Coolest days on average
(Lowest mean daily maximum temperature)
3.9 °C at Thredbo AWS

Coldest day
(Lowest daily maximum temperature)
−3.8 °C at Thredbo AWS on the 26th

Coldest night
(Lowest daily minimum temperature)
−10.4 °C at Thredbo AWS on the 2nd

Coolest nights on average
(Lowest mean daily minimum temperature)
−1.9 °C at Thredbo AWS

Warmest nights on average
(Highest mean daily minimum temperature)
15.5 °C at Byron Bay (Cape Byron AWS)

Warmest night
(Highest daily minimum temperature)
21.1 °C at Broken Hill Airport AWS on the 12th
21.1 °C at Murwillumbah on the 23rd

Wettest overall
(Highest total rainfall)
292.0 mm at Thredbo Village
220.1 mm at Charlotte Pass (Kosciusko Chalet)

Driest overall
(Lowest total rainfall)
0 mm at Broken Hill (Waterbag)
0.8 mm at Broken Hill (Langawirra)

Wettest day
(Highest daily rainfall)
83.0 mm at Lightning Ridge Post office on the 4th

Highest wind gust
113 km/h at Mount Ginini AWS on the 25th

Significant weather

Severe thunderstorms

4th September - thunderstorm with 3 cm hail at Coonabarabran on CW Slopes. Hail was lying up to 8 cm deep on ground 3 km south of town. Hail also reported in Nundle area of the NW Slopes. Storms and strong winds at Barradine Forestry caused damage to trees. Very heavy rain from storms at Lightning Ridge with 83 mm recorded in 24 hours, the wettest September day on record.

7th September - thunderstorm, hail and brief heavy rain in Sydney suburbs with 10 mm recorded in 10 minutes. Pea size hail covered ground in Concord.

20th September - thunderstorm and hail between 1 and 2 cm was reported in northern Sydney suburbs.

22nd September - widespread thunderstorms in all districts except NE corner. A severe thunderstorm in Crookwell-Gunning area of Southern Tablelands with golf ball size hail smashed windows and caused considerable roof damage. Some reports mentioned 'cricket ball' size hail. Ground was covered in white layer of hail. At Young (SW Slopes) a thunderstorm which produced marble size hail caused moderate damage to orchards in the area. Thunderstorm with heavy rain and hail in Bathurst-Blayney area caused power outages affecting 3000 people. Storm spotter reports of 20 mm in 7 minutes at Orange. Flash flooding after heavy rain at Deniliquin (Riverina) caused water damage to several buildings. A total of 38 mm was recorded at Deniliquin (Wilkinson St site) in about 2 hours, the heaviest rain for nearly 2 years and the wettest September day since 1916. It ranks as the 3rd wettest September day since records commenced in 1858. Both Wagga Wagga and Henty (SW Slopes) had 2 cm hail with storms while Moss Vale recorded a wind gust of 109 km/h at 5 pm. A downburst from a thunderstorm at Murrumbateman (near Canberra) around 10 pm caused extensive wind damage in a well defined path.

Duststorms

With dry conditions and numerous windy days across the state, duststorms and raised dust were a common phenomena during September. Minor duststorms were reported in western NSW on 11th, 12th and 13th with visibility reduced to about 500 metres in the Broken Hill-Lake Victoria area.

By far the most significant duststorm occurred on the 22nd and 23rd which affected the whole state and reduced visibility in most locations to under 1 km. The dust originated from the Lake Eyre region in South Australia as well as western NSW and was swept over the state by strong westerly winds. A blood red sky and choking dust greeted Sydney on morning of 23rd reducing visibility to between 300 and 500 metres over the city, the worst dust storm in Sydney since 1942. Sydney Airport was closed and many flights delayed or cancelled. Ferries were cancelled on Sydney Harbour and road transport disrupted. Sporting events were cancelled and hundreds of people were admitted to hospital with respiratory problems. As the dust plume moved north-east, similar conditions were reported along the coast and tablelands with visibility as low as 100 metres at Grafton, Coonabarabran, Bowral and Forster before the dust cloud moved into Queensland. The dust storm typically lasted 6–8 hours but up to 12 hours in the Cobar area of western NSW. It was estimated that dust was being blown out to sea at the rate of 75 000 tonnes per hour with a total of over 1 million tonnes.

Further duststorms affected the state on the 25th and 26th with widespread dust reported from most inland locations and reaching the coast by early morning on the 26th. Visibility in Sydney was reduced to 4 km but was less than 500 metres at many locations on the NW Slopes and Northern Tablelands.

Winds

Southern NSW experienced well above average number of windy days in September. Locations such as Bombala and Hay recorded 9 windy days each (September average 2) and Montague Island 16 windy days (average 11). Intense low pressure systems in the SW Tasman Sea from 23rd to 27th caused strong to gale force winds over southern districts of NSW for several days. With central pressures as low as 976 hPa, the lows caused wind gusts exceeding 100 km/h at many locations in the south east. The strongest winds were in coastal and mountain regions where Gabo Island (Victorian border) recorded 119 km/h on the 27th, Mount Ginini (ACT) 113 km/h on the 25th and Bombala 94 km/h on the 27th.

Snow

The only significant snowfalls during September were associated with a cold outbreak on the 26th and 27th. This caused heavy snowfalls in the Snowy Mountains with nearly half a metre of snow in 3 days. Snowfalls extended to the Central Tablelands early on the 27th with about 4 cm recorded on higher ground. The hills around Batlow (SW Slopes) recorded several centimetres of snow while Canberra reported brief falls of sleet.

Bushfires

The dry conditions during September continued the threat of bushfires around the state with nearly 100 fires reported at various times during the month, mostly in coastal regions. Fires which started in August continued burning in September and became more widespread later in the month as dry westerly winds freshened. At Mt Dromedary on the South Coast, one of the largest fires (over 3000 ha) which started on 27 August, continued to burn for most of the month. Numerous fires in the Bulahdelah-Port Stephens area totalled over 3000 ha in size with thick smoke affecting road traffic on the Pacific Highway. A fire at Collets Crossing in the Clarence Valley (North

Coast) burnt over 4000 ha. Numerous smaller fires broke out on the Mid North Coast and in the Hunter but no property damage was reported.

Synoptic summary

A low pressure trough on the 4th caused showers and scattered thunderstorms in most districts. The heaviest falls were associated with storms in the northern inland region and the Snowy Mountains with hail reported at some locations. The highest falls were 83 mm at Lightning Ridge PO (Upper Western), 41 mm at Delungra and 32 mm at Croppa Creek (Rawdon).

On the 7th a cold front was preceded by rain areas and isolated thunderstorm, mainly in the eastern half of the state. Falls were again heaviest on the NW Slopes and in the Snowy Mountains with some storms producing small hail in the Metropolitan area. Tops falls include Breeza (NW Slopes) with 30 mm and Tidbinbilla in the ACT with 23 mm. A spell of settled weather prevailed until a weakening cold front and associated cloud band on the 18th brought generally light showers to southern and central inland districts with some moderate falls on the Snowy Mountains. The highest fall was 33 mm at Thredbo Village.

On the 22nd and 23rd, the approach of two cut-off low pressure systems maintained a broad area of low pressure over NSW. The low caused widespread but generally light showers throughout the state but there were some isolated heavy falls in the south. Thunderstorms were widespread and produced large hail over parts of the Southern Tablelands and SW Slopes. Falls were heavier over southern inland districts with flash flooding reported at Deniliquin associated with storms. The highest falls were 50 mm at Braidwood (South Coast) and 49 mm at Urana (Riverina) on the 23rd; both totals were the highest daily rainfall on record for September for these locations. Other falls included 46 mm at Charlotte Pass (Snowy Mountains) and 38 mm at Deniliquin (Riverina), both on the 22nd. Lighter falls include 34 mm at Gurrundah (Southern Tablelands) and 29 mm at Bathurst Ag (Central Tablelands) on the 23rd.

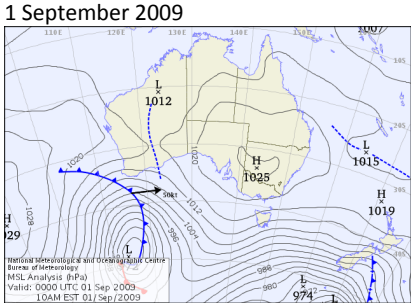

The cut-off lows intensified over NSW and caused strong winds over several days. Combined with a long westerly trajectory, they caused widespread duststorms over the entire state on the 22nd and 23rd. Visibility was reduced to a few hundred metres at many locations throughout the state causing major disruptions. In Sydney it was considered the worst duststorm since 1942.

A strong cold front and intense low pressure system on the 26th and 27th caused further strong to gale force winds over NSW with showers mainly in the southern inland districts. The cold outbreak brought heavy snowfalls to the Snowy Mountains and light falls to the Central Tablelands. The heaviest rain was recorded in the Snowy Mountains and SW Slopes with 3 day totals including 75 mm at Thredbo Village, 37 mm at Mt Ginini and 34 mm at Tumbarumba. Widespread raised dust over NSW for the second

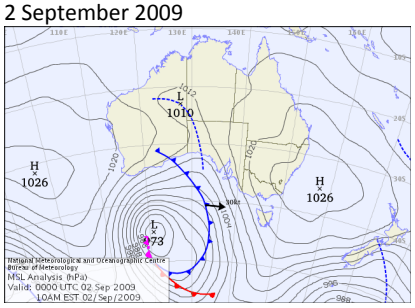

time in 4 days was again associated with the strong westerly winds which peaked at 119 km/h at Gabo Island (Victorian border) on the 27th.

Temperatures

NSW experienced a very warm start to spring with well above average maximum and minimum temperatures throughout the state during September. The average mean temperature for NSW in September was 15.2 °C which is 1.4 °C above the historical average. Several locations along the central NSW coast, including Sydney Observatory Hill, recorded their hottest September on record. It was the 15th consecutive September in NSW with respect to average mean temperatures. The last 'cool' (below average) September occurring back in 1994.

An El Niño event is currently maturing in the equatorial Pacific Ocean. These events are usually (but not always) associated with above average temperatures in eastern Australia. Very high temperatures experienced throughout August and September are likely due to the current influence of El Niño combined with the background, long-term warming that has been observed across Australia since the start of last century.

New temperature records

Record highest September mean maximum temperature

	New record	Old record	Years of record
Gosford (Narara Research Station) AWS	23.7	= 23.7 in 1965	30

Perisher Valley	0.4	0.2 in 1999	33
Nelson Bay (Nelson Head)	14.4	13.8 in 2006	24

Maximum temperatures

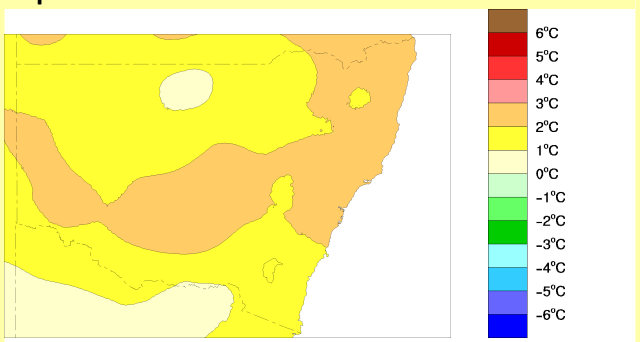

All districts reported above average maximum temperatures during September. Central inland and north eastern districts as well as all coastal regions north of the Illawarra recorded maxima 2–3 °C above the historic average. A few coastal locations reported their highest average maximum temperature on record for September. Riverview Observatory (Metropolitan) recorded an average of 23.7 °C (3.0 °C above September average), the highest in the 72 year record. The NSW statewide average maximum temperature was 22.5 °C which is 1.9 °C above the historical average of 20.6 °C and ranks as the 11th warmest September on record for statewide average maximum temperatures.

Several times during the months, northerly winds ahead of cold fronts caused hot air from the interior of the continent to flow southward over NSW resulting in temperatures well into the 30's over much of the state. The heat reached a peak on the 12th, 13th and 17th when temperatures climbed into the low 30's in many districts.

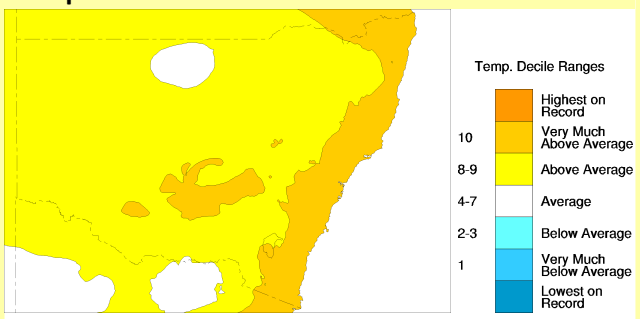

The hottest day was 35.8 °C at Brewarrina Hospital on the 17th, followed by 35.2 °C at Tibooburra Post Office on the 13th, followed by 34.8 °C at Wanaaring Post Office on the 13th. The warmest days on average were 27.3 °C at Casino Airport followed by 27.2 °C at Lismore Airport AWS.

The coldest day was −3.8 °C at Thredbo AWS on the 26th, followed by −2.5 °C at Charlotte Pass on the 26th, followed by −2.5 °C at Mount Ginini AWS on the 26th. The coldest days on average were 3.9 °C at Thredbo AWS, followed by 6.3 °C at Charlotte Pass, followed by 6.9 °C at Perisher Valley.

Anomalies of mean daily maximum temperature in September 2009

Decile rank of mean daily maximum temperature in September 2009

There could be discrepancies between the values shown on these maps and those at individual locations, as a result of the way the maps are generated.

Minimum temperatures

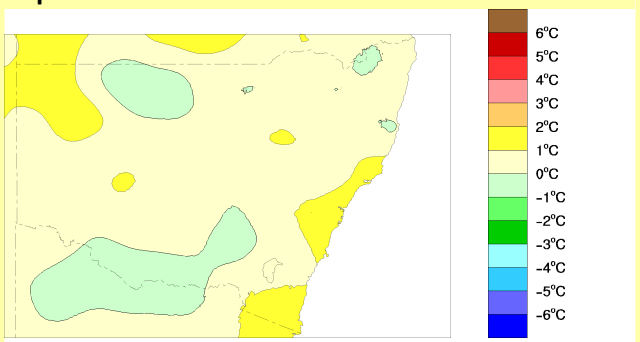

The average statewide minimum temperature during September was 7.8 °C which is 0.7 °C above the historical average of 7.1 °C. It is the 5th consecutive September with above average statewide minimum temperature in NSW. Most of the state was up to 1 °C above the historical average with some areas up to 2 °C above average namely, south and central coastal districts as well as the far northwest. A few locations in the east recorded their highest average minimum temperature on record for September. This included Sydney Observatory Hill with an average of 13.5 °C, the highest over the 151 year record. The Snowy Mountains also recorded mild nights with an average of 0.4 °C at Perisher Valley, the highest in 33 years of record.

Regular frontal systems which brought windy conditions with very warm air from the northwest contributed towards the above average minimum temperatures. A typical event on the 12th with a broad, warm NW flow resulted in high overnight minimums in the west of the state, the highest being 21.1 °C at Broken Hill Airport. Similar events occurred on the 17th and 22nd. In contrast, a cold change late in the month which brought snow to the higher ground in the south, caused very low temperatures on the North Coast on the 28th and frosts on the Northern Tablelands. The minimum of 3.2 °C at Murwillumbah was equal lowest on record for September.

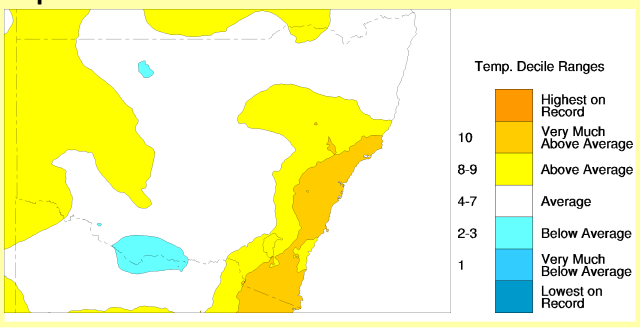

The coldest night was −10.4 °C at Thredbo AWS on the 2nd, followed by −9.9 °C at Charlotte Pass on the 2nd, followed by −8.4 °C at Charlotte Pass on the 6th. The coolest nights on average were −1.9 °C at Thredbo AWS, followed by −1.5 °C at Charlotte Pass, followed by 0.4 °C at Perisher Valley.

The warmest nights on average were 15.5 °C at Cape Byron AWS, followed by 14.4 °C at Nelson Bay and 14.4 °C at Smoky Cape Lighthouse, followed by 13.5 °C at Sydney (Observatory Hill). The warmest night was 21.1 °C at Broken Hill Airport AWS on the 12th and 21.1 °C at Murwillumbah on the 23rd, followed by 20.3 °C at Tibooburra Airport on the 17th.

Anomalies of mean daily minimum temperature in September 2009

Decile rank of mean daily minimum temperature in September 2009

There could be discrepancies between the values shown on these maps and those at individual locations, as a result of the way the maps are generated.

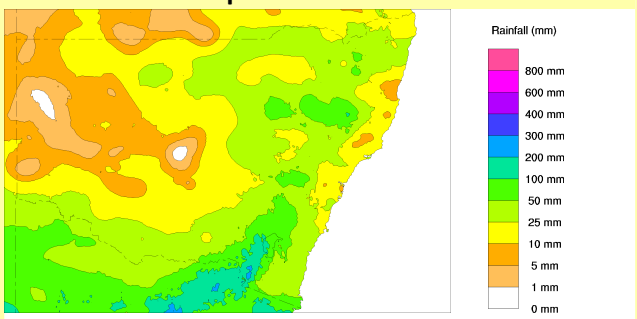

Rainfall

Dry conditions prevailed along the NSW coast during September with well below average rainfall in some locations. The central west and far west of the state also recorded well below average rainfall. Most other regions recorded close to average rainfall with parts of the Upper Western, NW Plains and the Snowy Mountains recording slightly above average rainfall. The wettest location was Thredbo Village with 292 mm for the month.

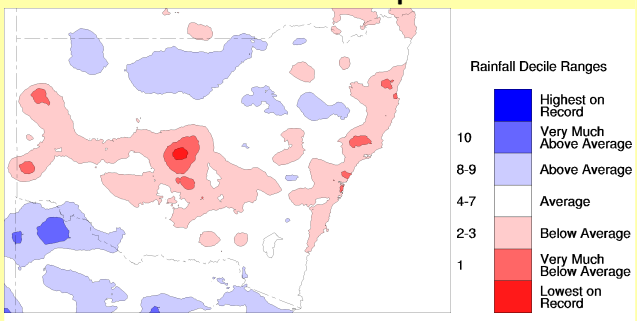

The statewide average rainfall for NSW was 24.2 mm which is below the historical average of 35.7 mm. The Murray Darling Basin recorded a basin wide average of 28.4 mm which is only slightly below the historical average of 34.6 mm. With dry westerly winds prevailing during most of the month, the lack of rain was particularly apparent in coastal districts with much of the coast north of Jervis Bay (Illawarra) recording less than 20 mm. Brooklyn on the Central Coast recorded a September total of 7.7 mm, the lowest since 1945. On the North Coast, Tweed Heads' total of 8.8 mm was the lowest for September in 18 years.

The wettest overall was 292.0 mm at Thredbo Village followed by 220.1 mm at Charlotte Pass. The wettest single day was 83 mm at Lightning Ridge Post Office on the 4th.

Total precipitation	16.0 mm		69.1 mm	
Number of rain days	4		10.6	
Wettest day	6.0 mm	on the 4th	144.5 mm	on the 10th in 1879
Sunshine				
Mean daily sunshine	8.8 hours		7.9 hours	
Evaporation				
Mean daily evaporation	5.9 mm		4.9 mm	
Phenomena				
Days of thunder	2		2.2	
Days of hail	0		0.4	
Days of fog	0		1.0	
Days with mist or haze	13		20.2	

Summary of observations for Canberra in September 2009

Observations and climatology are from Canberra Airport.

	Observed this month		Climatological value	
Temperature				
Mean daily maximum temperature	17.4 °C		16.2 °C	
Mean daily minimum temperature	4.3 °C		3.2 °C	
Mean temperature	10.8 °C		9.7 °C	
Mean temperature at 9 am	10.8 °C		9.6 °C	
Mean temperature at 3 pm	16.3 °C		15.1 °C	
Highest temperature	25.2 °C	on the 13th	28.6 °C	on the 26th in 1965
Lowest temperature	−2.3 °C	on the 6th	−6.4 °C	on the 10th in 1982
Lowest terrestrial temperature	−6.0 °C	on the 6th	−10.7 °C	on the 10th in 1982
Days 28 °C or warmer	0		0.0	
Days 30 °C or warmer	0		0.0	
Days 35 °C or warmer	0		0.0	
Nights 5 °C or cooler	17		20.5	
Nights 2 °C or cooler	8		12.0	
Nights −2 °C or cooler	2		2.3	
Humidity				
Mean relative humidity at 9 am	68 %		71 %	
Mean relative humidity at 3 pm	43 %		49 %	
Pressure				
Mean MSL pressure at 9 am	1015.7 hPa		1018.8 hPa	
Mean MSL pressure at 3 pm	1012.7 hPa		1015.9 hPa	
Wind				
Strongest wind gust	N 70 km/h	on the 25th	NNW 107 km/h	on the 12th in 1972
Mean wind speed at 9 am	13 km/h		11 km/h	
Mean wind speed at 3 pm	24 km/h		20 km/h	
Days with strong wind	2		3.7	
Days with gales	0		0.3	
Days with gale-force gusts	6		3.9	
Rainfall				
Total precipitation	57.6 mm		52.2 mm	
Number of rain days	10		10.3	
Wettest day	27.2 mm	on the 23rd	43.4 mm	on the 8th in 1978
Sunshine				
Mean daily sunshine	8.4 hours		7.7 hours	
Evaporation				
Mean daily evaporation	4.3 mm		3.8 mm	
Phenomena				
Days of thunder	1		1.9	
Days of hail	0		0.8	
Days of frost	7		13.0	
Days of fog	1		3.7	
Days with mist or haze	17		11.1	
Days with snow	0		0.4	

Daily and mean maximum temperatures for September 2009

Mean is the average of the daily maximum temperature for September 2009; it is only shown if there are sufficient days available. **Anom** is the difference between the mean daily maximum temperature for September 2009 and the long-term average maximum temperature for September. **Decile** is the decile rank of mean daily maximum temperature for September 2009 in the climate record of other September mean daily maximum temperatures; "L" indicates this is the lowest on record, and "H" it is the highest on record. Anomalies and deciles are only shown if there are sufficient years of climate record available. The lowest and highest maximum temperatures for each site for September 2009 are highlighted.

Daily and mean maximum temperatures for September 2009

Mean is the average of the daily maximum temperature for September 2009; it is only shown if there are sufficient days available. **Anom** is the difference between the mean daily maximum temperature for September 2009 and the long-term average maximum temperature for September. **Decile** is the decile rank of mean daily maximum temperature for September 2009 in the climate record of other September mean daily maximum temperatures; "L" indicates this is the lowest on record, and "H" it is the highest on record. Anomalies and deciles are only shown if there are sufficient years of climate record available. The lowest and highest maximum temperatures for each site for September 2009 are highlighted.

Daily and mean minimum temperatures for September 2009

Mean is the average of the daily minimum temperature for September 2009; it is only shown if there are sufficient days available. **Anom** is the difference between the mean daily minimum temperature for September 2009 and the long-term average minimum temperature for September. **Decile** is the decile rank of mean daily minimum temperature for September 2009 in the climate record of other September mean daily minimum temperatures; "L" indicates this is the lowest on record, and "H" it is the highest on record. Anomalies and deciles are only shown if there are sufficient years of climate record available. The lowest and highest minimum temperatures for each site for September 2009 are highlighted.

Daily and mean minimum temperatures for September 2009

Mean is the average of the daily minimum temperature for September 2009; it is only shown if there are sufficient days available. **Anom** is the difference between the mean daily minimum temperature for September 2009 and the long-term average minimum temperature for September. **Decile** is the decile rank of mean daily minimum temperature for September 2009 in the climate record of other September mean daily minimum temperatures; "L" indicates this is the lowest on record, and "H" it is the highest on record. Anomalies and deciles are only shown if there are sufficient years of climate record available. The lowest and highest minimum temperatures for each site for September 2009 are highlighted.

Daily and total rainfall for September 2009

Total is the total precipitation for September 2009; a missing total indicates there is concern about the quality of some of the daily values. **Avg** is the long-term average total precipitation for September. **Decile** is the decile rank of total precipitation for September 2009 in the climate record of other September totals; "L" indicates this is the lowest on record, and "H" it is the highest on record. Long-term average and decile rank are only shown if there are sufficient years of climate record available. Reports of zero precipitation are shown as "· ". When a reading was accumulated over more than one day, "»" is shown on the days that are part of the accumulation.

Daily and total rainfall for September 2009

Total is the total precipitation for September 2009; a missing total indicates there is concern about the quality of some of the daily values. **Avg** is the long-term average total precipitation for September. **Decile** is the decile rank of total precipitation for September 2009 in the climate record of other September totals; "L" indicates this is the lowest on record, and "H" it is the highest on record. Long-term average and decile rank are only shown if there are sufficient years of climate record available. Reports of zero precipitation are shown as "· ". When a reading was accumulated over more than one day, "»" is shown on the days that are part of the accumulation.

Daily and total rainfall for September 2009

Total is the total precipitation for September 2009; a missing total indicates there is concern about the quality of some of the daily values. **Avg** is the long-term average total precipitation for September. **Decile** is the decile rank of total precipitation for September 2009 in the climate record of other September totals; "L" indicates this is the lowest on record, and "H" it is the highest on record. Long-term average and decile rank are only shown if there are sufficient years of climate record available. Reports of zero precipitation are shown as "· ". When a reading was accumulated over more than one day, "»" is shown on the days that are part of the accumulation.
